972-400-5272
Richardson, TX 75081
(Greater Dallas Texas DFW Metro area)
ss1396@yahoo.com
(US Citizen)

SUMMARY AND OBJECTIVE

Senior JAVA J2EE Full Stack Software Developer with 25 years of experience in developing/implementing Intranet/Internet Web-Based Software and Client/Server applications with a master's degree in computer science. Expert qualifications in Java/J2EE Technologies in Government, Finance, Healthcare, Telecom, B2B, SAAS, product development and Consumer Industries. Looking for a Senior Level Java/J2EE developer position only.

SKILLS AND EXPERIENCE:

Languages/ Methodologies: Java 11, Java 8, JDK 1.8, J2EE, Spring framework 6, Spring MVC, Spring boot 4, Struts framework 1.x, 2.x, Hibernate 4.0, EJB 2.0, JNDI, JDBC, JMS, Oracle PL SQL, LDAP, XML, EDI, UML, MVC, Object-Oriented design and programming, Design Patterns, JMS, MQSeries, UNIX Shell Script, Database Design, SQL, SDLC, Junit, AJAX, DOJO, JAX-WS, SOAP and RESTful Web Service, SOA, Microservice, Axis. JSON. Ext-js, Thymeleaf, node.js, vue.js, Angular 11, ReactJS 18, ServiceNow Developer Madrid, Power Builder 6.5 and 7.0, Informix 4GL, C++, T-SQL, Crystal Reports. API Gateways, python, Django 2.2.

Databases: Oracle 12c, Oracle 11g, SQL Server 2005, DB2, MYSQL, Informix 7.2, MongoDB, Cassandra.

Messaging systems: IBM MQ, Active MQ, Rabbit MQ, Apache Kafka.

Software development Tools: IBM RAD 7.5, IBM WSAD 5.0, JDK 1.8, JDK 1.7, J2SE, J2EE, Eclipse, Qwest for DB2, SQL Navigator, SQL Developer, TOAD, SVN, PVCS, Visual Source Safe (VSS), Requisite Pro, ClearCase, ClearQuest, Rational Rose, Crystal Report, Jasper Reporting tool, JIRA, cloud, splunk / kibana, AppDynamics / Dynatrace, OpenShift, Jenkins. CI/CD.

Operating Systems: AIX, UNIX, Linux RHEL7, Sun Solaris UNIX, Windows.

Application Servers: Apache Tomcat 10, JBoss 6.5, Wildfly, WebSphere Application Server, WebLogic Server, Oracle 10g Application Server, Oracle 9i App Server, Oracle OC4J.

EDUCATION:

MS in Computer Science (CS). Bradley University, Peoria (near Chicago), ILLINOIS 1995.

BS in EE, Bangladesh University of Engineering & Tech (BUET), Dhaka, Bangladesh.

PROFESSIONAL EXPERIENCE:

Lakarya Inc. (Arlington, VA)
Senior Java/J2EE Developer

06/2023 to Present

Developing microservice REST API with spring boot using Spring framework for Education department Federal student loan project and deployed Java API code to AWS cloud. Used Java, Spring, Jenkins, GitLab, etc. for development and deployment. Worked many APIs on different modules to manage student loan and application information, etc. Used CI/CD containerization for code deployment and API management. Front end work is being done with Angular 11.

Lockheed Martin (LanceSoft Inc. Stratford, CT)
Senior Java/J2EE Developer

12/2021 to 05/2023

Worked on Manufacturing Execution and Planning System Software (MES/MPS) for a legacy software using Java/J2EE and Java 11, Java 8. Application was developed using Spring MVC framework in an Agile environment. It is a software as SAAS and serving many manufacturing departments. Developed new code and modified existing code in HTML, JSP, JavaScript, Spring Controllers, Spring Boot, Microservices, Rest API, Hibernate, apache Camel, etc. Used Oracle and Mongo DB as the backend DB. Developed and modified many complex SQL queries and created tables, etc. Developing Jasper reports with version 6.20.

- Used containerization-based deployment with Docker and Kubernetes in AWS cloud environment for code deployment and API management. Migrated to AWS from web application. Used Jenkins, OpenShift, Dynatrace, etc. tools during development and deployment to production.
- Worked on integration with different systems like SAP Manufacturing systems and COTS.
- Used python and Django 2.2 with postgres DB for a small API project.
- Developed Jasper reports with version 6.20.

AmWell.com (BigRio.com, Boston, MA)
Senior Java/J2EE Developer

06/2020 to 12/2021

Worked as Full Stack Java J2EE enterprise developer at America's second largest **Web-Based Online Virtual Doctor Appointment/Doctor visit software (SAAS) for Amwell.com. This is a Tele-Medicine/Telehealth Healthcare Software company** in USA with 8 million customers. Used Java 8 and Java 11 for the project. CareTalk Application was developed using Spring MVC framework. Added new features and modified existing features. Wrote code in HTML, JSP, JavaScript, Spring Framework and Hibernate 5 for the project. Also, wrote code in angular, react.js, vue.js, redux, node.js, npm, CSS, DOJO, Spring Rest Controllers, Spring Boot configuration, Rest API, Microservice, Hibernate, etc.

- Added new features to the existing applications enhancement work for example added SMS feature for appointment, zero cost payment, etc. Developed and modified HTML,

JSP, REST APIs, JWT, DOJO, JavaScript, Service and backend DAO layer code and complex business logic coding for the projects.

- Developed many microservices to be called from the **CareTalk** application using Spring Boot. For example, getting Lab result, Lab reports, getting patient subscription info, etc.
- Used Git/Bitbucket for source control, Containerization tools like CI/CD Jenkins DevOps, Docker, Kubernetes, etc. for build and deployment of the code in the pipeline to SIT/DEV, QA, UAT, Pre-Prod. Used Maven and deployed to Apache Tomcat server. Used OAuth2 for security and authentication.
- Used Eclipse and IntelliJ IDE for development in the Windows Environment. Used Unix for log and deployment checks, etc.
- Used Oracle as backend DB and Mongo DB and JIRA for Agile development.
- Used ActiveMQ, IBM MQ and Kafka streaming messaging and apache flink for sending data to Mainframe applications and other applications.
- Used SonarQube, sonarlint for code coverage.
- Used Containerization tools Docker and Kubernetes and OpenShift for deployment process. Used AWS environment for code deployment.
- Worked on integration with different systems like, LabService app, hospital applications.
- It is a software as SAAS and serving many healthcare clients.
- Built and maintained message configuration and flows. And messaging and stream processing on Kafka streaming messaging and apache flink and have set up and configured Kafka brokers. Set connector and Apache Zookeeper. Used kafka in microservices for asynchronous communication.
- Developed Junit test cases with Mockito for unit tests for writing test cases.
- Experience with HIPPA migration and HIPPA claims. Knowledge of both HL7 version 3 and HIPPA 5010. Developed UI and backend code using HIPPA policies and procedures and compliance. Handled PHI and PII rules and resolved issues with HIPPA issues.
- Used WSO2 API manager 4.0 for API management tools to design, develop, publish, security keys, lifecycle and manage APIs.
- Worked as Lead Developer for the project. And helped junior developer as needed.

Citi Bank (Irving, TX)

09/2019 to 06/2020

Senior Java/J2EE Developer

Worked as Senior Java developer on several Web-Based tools like

1. Assessment, Analyzing and Monitoring for Security (AAM),
 2. Anti-Money Laundering (AML), Fraud detection/management,
 3. Risk assessment (RA),
 4. Compliance assessment (CA),
 5. Compliance Monitoring (CM),
 6. Software security assessments (SSA), etc. tools developed using Java/J2EE using JDK 11 for the project. Worked on Spring MVC framework, Spring Boot framework, Java Rest API, Microservices and Hibernate and Spring Data at the Backend for DB.
- Added new features to the existing applications enhancement work. Developed code inside AWS environment using eclipse. Worked on migration of some of those applications from non-cloud to AWS cloud environment and resolve issues on migration.

Developed complex business logic to do the calculations in the service layer. Developed code on Angular JS 8.0, angular 11, Thymeleaf and react.js.

- Developed few Microservice API using Spring Boot to get the customer accounts. Wrote code using REST APIs, JWT, oath2, DOM manipulation, Service and DAO coding for the project. Used Apigee API Gateway service for managing APIs.
- Used Oracle 12c as backend DB, JIRA for Agile, and GitHub/Bitbucket for source control and Eclipse for development in the Windows Environment and Unix/Redhat Linux for the server related work and wrote many bash shell scripts.
- Developing messaging application using IBM MQ and Active MQ.
- Worked with DevOps to build and deployment of the code in the pipeline to SIT, UAT and Maven and Apache Tomcat for build and deploy in the local environment. Used Docker and Kubernetes and OpenShift for deployment process.
- Used Containerization tools Docker and Kubernetes and OpenShift for deployment process. Used AWS environment for code deployment. Used Tekton and CI/CD jenkins for cloud deployment.
- Built and maintained message configuration and flows. And messaging and stream processing on Kafka and have set up and configured Kafka brokers. Set connector and Apache Zookeeper. Used kafka in microservices for asynchronous communication.
- Used SonarQube, sonarlite for code clean up.

Verizon telecom, Irving, TX (STS Consulting)

10/2018 to 09/2019

Senior Java/J2EE Developer

Worked at Verizon Telecom Technology ([VZT, Network & Technology](#)) on a PowerBuilder 6.5 to Java/J2EE conversion project. The project is called Online Order management Software to manage local and international customers and their orders for buying telephone lines and communication equipment. Added new features in the Appian (PowerBuilder) application.

- Developed code Java, JDBC, DAO. Used Using JDK 1.8, Jboss EAP7, WildFly and Oracle 12c.
- Used Maven for build. Developed SOAP Webservice API with XML and REST API Webservice with JSON to send data from upstream to downstream. Used Apigee API Gateway service for managing APIs. Used Tekton for deployment to cloud. Used JIRA for Agile and GitHub/ bitbucket for source control. Used JSP, HTML, ThymeLeaf, node.js, CSS, JavaScript, JSTL for UI development. Used OAUTH2 for security and authentication.
- Used autosys for job scheduling. Also worked on many COTS products.
- Worked with the DBA to design the tables and created and modified tables in the Oracle 11g DB. Wrote SQL and Unix commands for the deployment and log file analysis. Developed design document for the project.
- Migrated around 10 to 12 Java/J2EE and Core Java applications from old Unix Server to a new Unix Server.
- Worked on a conversion project to convert the Java/J2EE project to ServiceNow project. Developed screens, tables, Glide Record, Workflow, ACL, Client side and Server-side scripts, validation, business rules, JavaScript, Angular.JS 8.0, Thymeleaf, update sets,

import data, Rest and SOAP API outbound and Inbound calls, Transformation maps, Service Portal, etc. using ServiceNow Madrid.

- Developed Junit test cases with Mockito for unit tests. Developed test cases with Groovy.
- Converted a COBOL / Mainframe application to Web-Based Java/J2EE application by reading the COBOL code and all logic and business functions and created documents for the conversion project.
- Worked on Terraform with devOps team.

Bank of America, Addison, TX (Apex System)

07/2018 10/2018

Senior Java Developer

- Worked on a Middleware project at Bank of America to collect data from different sources and send to consumers as they ask for customized data for analysis. All the works are on the Middleware Backend service layer using Micro Service using Spring boot, Apache tomcat, Apache Camel, Zookeeper, Kafka, Splunk, IBM MQ, Rabbit MQ, JMS, ActiveMQ, CI/CD Jenkins and devOps team. Worked in the production support team. Used Cassandra, nosql MongoDB to store large amount of customer search data for analysis. Application was deployed to AWS. The application is running under the AWS environment.
- Developed and modified spring microservices with spring boot for the project.
- Worked on the processing Upstream XML, JSON and other format data using the Engine and then send to and downstream. Developed Restful Microservice using Spring Restful Webservice technology.
- Used Java 11 for the project. Used Eclipse, NOSQL MongoDB and Oracle DB as the backend. Used GIT for the project source control. Used AWS, Docker and Kubernetes for build/deploy. Code build/deploy using tomcat.
- Worked in an Agile and distributed team of workers from New jersey, Charlotte and India.
- Built and maintained message configuration and flows. And messaging and stream processing on Kafka and have set up and configured Kafka brokers. Set connector and Apache Zookeeper. Used kafka in microservices for asynchronous communication.

US Department of Veteran Affairs (Marjau Systems, Remote)

04/2018 to 07/2018

Senior Java/J2EE Developer

Worked on **US Department of Veteran Affairs** Burial Management System software (Funeral) on different Web Based and Backend core Java applications all Java/J2EE using Java 1.8.

- Developed and modified JSF pages, JSP and Struts and Spring Controllers and Backend DAO layer code with EJB. Used Spring 4 framework and Hibernate 4 as the framework. Added and modified many JMS and MDB beans. Used WebLogic application server and WebSphere Application Server 8.0 for the project. Developed and modified many Jasper Reports.
- Used Oracle 11g for the development. Used ISAM, TAM, Authentication, single sign-on SSO, TFIM, etc. for security for the Webservices.
- Used SVN for the project. Developed many users guide and different documents for the projects.

- Knowledge of both HL7 version 3 and HIPPA 5010. Developed UI and backend code using HIPPA policies and procedures and compliance. Handled PHI and PII rules and resolved issues with HIPPA issues and reduced HIPPA violations.
- Worked on Terraform with devOps team.

Bank of America, Plano, TX (Collabera Inc)
Senior Java Developer

09/2017 03/2018

Worked on **Accenture** project on ETS/ESS security and AML Fraud detection/management system project of Bank of America. All the works are on the Middleware Backend service layer using Spring boot and Micro Service and nosql db.

- Developed Restful Microservice Webservice using Spring Restful Webservice technology. Developed many spring microservices with spring boot for the project. Code build/deploy using apache tomcat. Built very complex business logic for the project.
- Used Actimize and Autosys for the application and The PEGA system was calling these webservices to get data for new Bank Customers to verify their eligibility for office of foreign assets control (OFAC). Used Java 11 and Java 8 for the J2EE project.
- Used Eclipse and Oracle DB as the backend. Used GIT for the project and Oracle 12c for the database.

Bank of America, Plano, TX (Matlen Silver group)
Senior Java Developer

02/2017 09/2017

Worked on Credit Recovery Service (UCRS) project of Bank of America. All the works are on the Middleware Backend service layer.

- Developed and modified Restful Webservice using JAX-RS and Spring Restful Webservice.
- Developed spring boot microservices and build/deploy using tomcat. Used Java 1.8 for the J2EE project. Used SVN and Maven and GIT for the project and Oracle for the database. Used Agile development for the project.

Verizon telecom, Irving, TX (Remote, Collabera Inc)
Senior Java/J2EE Developer

05/2015 to 02/2017

Worked in the VZT Network & Technology team, to develop a Web based application using Java/J2EE technology Request Management System for internal employees.

- Designed the application and worked with the Architect to come up the solution and architecture. Developed code using Java, JSP, Servlet, HTML, CSS, JavaScript, JQuery, node.js, Ajax, Bootstrap, JDBC, DAO. Used Jboss EAP 7 and JDK 1.7 and JDK 1.8. Developed SOAP and RESTful webservice with XML/JSON response to call some services for authentication and authorization service. Also, developed Microservice using spring boot for the application. Used JIRA, SVN and GIT for source control. Used spring boot for build/deploy.

- Worked with the business analyst to create the screen mockups and requirements. Worked with the DBA to design the tables and create tables in the Oracle 11g DB. Also, wrote sql and Unix commands for the job. Developed design document for the project.
- Developed code in Selenium for Java for automated testing to test the whole application.
- Used the RHEL Linux to deployment, modify and run the bash shell scripts used for looking at the log file for errors. Run CRON batch jobs from Linux environments, etc.
- Developed Service Portal for Request Management System using ServiceNow tool. Developed screens, tables, Glide Record, Workflow, ACL, Client side and Server-side validation, developed business rules, Angular JS, Service Portal, etc. for a Custom Application using ServiceNow London. Developed/ unit tested Script Includes, Business Rules, Notifications and Notification Email Scripts, Scheduled Jobs, System Logs, UI Scripts, UI Pages, Security Roles/Groups and Reports.

IBM USA (Remote, Infinite Computer Solution)
Senior Java Developer

08/2014 to 05/2015

Developed **Time Tracking Tool (Timesheet entry)** which a Web based application using Java/J2EE technology. Wrote code using Java, JSP, HTML, CSS, JavaScript, Spring MVC, Spring JDBC.

- Used Rational Software Architect (RSA) and IBM WebSphere 7 and JDK 1.7 and JDK 1.8. Used RTC for source control. Wrote code for Controller, Service class and DAO layer.
- Worked with Business analyst to create the wireframes. Completed the task list using JAZZ. Worked with the DBA to design the tables and create tables in the DB2 database. Worked with onshore/ offshore team in India. Designed and worked as junior architect to develop the application and worked with the Architect to come up the solution and architecture.
- Developed Spring RESTful services different components using best design patterns and practices. Used Spring boot for the project. Developed applications with web security in mind. Also tested and created applications that run on SSL. Used Spring security for the project to give access to users and for the login.

Worked for the **IBM Sales One** Web based application using Java/J2EE technology. Developed code using Java, JSP, HTML, CSS, JavaScript, Struts 1.2, JDBC, OpenJPA. Used RAD7 and IBM WebSphere 7 and JDK 1.6. Used RTC for source control. Converted the backend from XML to DB tables.

- Wrote code for DAO, Service layer. Worked with the DBA to design the tables and create tables in the DB2 database. Worked with onshore/ offshore team in Romania, Mexico and India. worked with the Architect to come up the solution and architecture.

Technatomy Corporation (Peridot Solutions, Fairfax, VA)
Senior Java Developer

07/2013 to 8/2014

Worked for the **US Department of Education** Federal Student Loan WEB portal using Java/J2EE, Ext.js and TeamSite WEB development.

- Worked on merging two web applications into one application. Developed and modified UI and backend coding for the application using JSP, HTML, Struts 1.1, Oracle, WebSphere application server 7.0.
- Developed content management Web pages using Interwoven TeamSite tool. Created new forms and completed many enhancements and bug fixes. Used Rational clear quest (CQ) for issue tracking and Citrix server for remote access.
- Run scanning against the Web Servers for HTTP track/trace, cipher, sweet32, and advised solutions. Used RHEL 7 for deploying the java war file in the tomcat server. Used ISAM, TAM, Authentication, single sign-on SSO, TFIM, etc. for security for the webservice.

Worked on the **US Department of Veteran Affairs *Healthy Vet*** project for patients to keep track of their daily medicine usage. It is like a daily journal. Used Java/J2EE technology for the project.

- Completed many enhancements to the project. The application was running on WebLogic. The development environment was RAD8, Eclipse. JIRA, the backend was Oracle 11g.

Bank of America (Collabera), Dallas, TX

01/2013 to 7/2013

Senior Java Developer

Worked at Global Application Development (GAD) group to write Java/J2EE code for various backend server side applications. The applications are for maintaining Credit Card applications.

- The code written in various technologies like batch and Web-service coding. Developed LLD/HLD for the project. Developed code in JAX-WS, Java adapter class, Delegate, Service and all way to the DAO and SQLInvoker class, XSD and WSDL for webservices using apache axis and batch jobs.
- Tools used are RAD7.5, WebSphere 7, Maven, Oracle 11g, TOAD 11.0, etc. Developed DDL and DML for the Oracle Database.
- Added and modified many JMS and MDB beans.

HP, Plano, TX (Remote, Hewlett Packard), USA

04/2010 to 01/2013

Senior Java Developer

Worked at US Department of Veteran Administration project to redesign a Pharmacy drug management related Software (Pharmacy Re-engineering, PRE) using Java/J2EE technology to accomplish the work. The software is a Web based application developed for Pharmacists with Admin roles only.

- Redesigned the application to convert the Struts front end to use Spring MVC and removed EJB layer to simplify the process and used hibernate instead. Wrote code in HTML, JSP, CSS, Java, Spring MVC, dojo, JQuery, etc.
- Used Agile (Scrum) methodology to build the application.
- Modified the backend DAO code to use new database table structures
- Wrote code to process messages from Java using JMS and MDB beans and ActiveMQ.
- Developed code for front end UI (user Interface), middle layer and backend service layer. Written code using Java, JSP, JavaScript, DOJO, AJAX, JSTL, EJB, Spring MVC 3, Spring DI (dependency Injection/IOC), Spring Webflow and spring security, Hibernate

and built DAOs for business logic code and for CRUD operations. Developed DDL and DML for the Oracle Database.

- Used Weblogic application Server and Oracle 10g database as the backend database, Clear Case for source control and Clear Quest for bug tracking and DB Visualizer for Oracle database query.
- Assisted and mentored junior and entry - level developers.
- Also worked on the VHA (**Veteran health Administration**) project Enrollment application.

Parago (TechniSource), Lewisville, TX

02/2010 to 04/2010

Senior Java Developer

Worked on Web based Java/J2EE to develop new Web based applications for Staples, Netgear, BestBuy, etc. for customers to view their rebate information. It was a SaaS (software as a service) application.

- Developed UI front end code in HTML, JSPs, JSF pages, Velocity, Struts, business logic code, DAO for CRUD operations.
- Developed a batch program to pre-process flat files from Verizon Telecom for rebate processing.
- Used JBoss application Server and Oracle 10g database as the backend database, Clear Case for source control and Clear Quest for bug tracking, TOAD for Oracle database query.
- Developed applications with web security in mind. Also, tested and created applications that run on SSL. Developed Java code and Front-end code that is safe to web security. Used Spring security for the project to give access to users. And for the login.
- Run scanning against the Web Servers for HTTP track/trace, cipher, sweet32, and advised solutions.

Northrop Grumman Corporation (St. Augustine, FL)

09/2005 to 01/2010

Senior Java/J2EE Developer

- Worked at the US Air Force E-2D plane manufacturing plants. Developed, enhanced, and maintained Web-Based Java/J2EE Software Applications for the Battle Management and Engagement System of Aircraft Manufacturing Plant for US Air Force at El. Sagundo, CA and St. Augustine, FL facility working from central region office in Corsicana, TX. Developed both Web solutions and Core Java using J2EE. Developed and modified UI and backend coding for the application. Worked on COBOL programming to make changes to existing application. Converted two COBOL / Mainframe applications to Web-Based Java/J2EE application by reading the COBOL code and plucked all logic and business functions and created documents for the conversion project.
- Developed a new WEB-Based Government Inventory Control System (GMC) and Employee Attendance/Absentee maintenance System (SAAS) from scratch. Developed all code from front end to backend that includes UI using JSP and HTML, CSS, JavaScript, etc.
- Created many batch programs to feed data from SAP HRMS system each night into the Attendance/Absentee maintenance System (SAAS) application.

- Wrote code to process messages from Java using JMS and MDB beans and WebSphere MQ.
- Modified/enhanced existing Java/J2EE codes for all these 11 Web applications to meet user requirements. Fixed production problems including bug fixes and performance issues and supported all applications 24/7.
- The applications are Parts Order-management system, Order release, Over and above, Aircraft Maintenance, Quality tools Inspection, and Project-Planning/Manpower Forecasting and many others. Developed/modified many core Java batch programs for different purposes to move data among different systems (Oracle/DB2/SQL Server database applications). Developed/Modified HTML, JSP, Struts, EJB, Handlers, DAO, DTOs. Written business logic code using core Java for CRUD operations. Used DB2, Oracle and SQL Server 2005 for database access on the backend. Developed DDL and DML for the SQL Server and Oracle Database.
- All Web-based Software applications were developed using MVC2 design pattern, HTML, JSP, Servlet, Struts 1.1, JDBC 2.0, Hibernate 3.0, EJB 2.0.
- Used Subversion (SVN), CVS, Clear Case and VSS for version control. Used Paragraine and Clear Quest for bug tracking. Used RAD7, WebSphere 6.1 on windows platform.
- Deployed ear files in Unit, Staging and Production WebSphere Servers. Modified existing EJB applications to use Web Service for Login and DAO service.

Fidelity Financial, Orange County, CA.

05/2005 to 08/2005

Senior Java Developer

- Worked for USA's largest Mortgage Loan processor on a conversion project from Swing based application to a Web-based application. Responsible for enhancement project for web-based mortgage software using J2EE technology. Developed HTML, JSPs, Struts classes, EJBs, DAOs, DTOs and business logic code for CRUD operations.
- Developed SQL queries to join front end screens with database. Software was developed using Three-tier architecture with MVC2 design pattern, EJB 2.0, JSP, DAO, DTO, Struts 1.1. Used Eclipse, WebLogic, Tomcat, WSAD and WebSphere 5 and Oracle and DB2 Database. Used Clear Case for version control. Developed Junit test cases.
- Worked on many COTS products like Sailpoint.

Blue Cross Blue Shield of Florida, Jacksonville, FL

02/2004 to 04/2005

Senior Java Developer

- Developed three new WEB-Based software applications called On-line Remittance (OLR) and Plan Initiated Claim Status (PICS), VMT.
- Lead Developer on new WEB-Based Software to maintain Medical Clearance Rules (VMT) for the Medical Clearance team. Used Service Oriented Architecture (SOA), J2EE technology, Struts 1.1 Framework and WSAD 5.0 to develop the application. Worked on EDI transactions 278I, 278R, 275 and EDI X12.
- All these three applications have been developed using MVC2, Façade, DAO, Command, Front Controller, etc Design Patterns. Worked closely with Business Analysts, Designers, Architects and Testers to build, test and deploy the Application. Software was deployed using special tool called BART which utilizes Ant on the back.

- Developed HTML, JSP, DAO, DTO, Business Logic Classes, Action and Form classes, JavaScript and SQLs for database access and business rule validations. Developed Junit test cases for unit tests. Used JNDI and JDBC to connect to Oracle and DB2 database.
- Used Hibernate for DB access and log4j for logging purposes. Used web Service for Account validation, Login and DAO service. Used PVCS, Rational ClearCase for source control, ClearQuest for bug tracking, Rational Rose for class diagram and sequence diagrams architecture design. Used Websphere 5.1 application Server to run the applications.

Bank of America, Jacksonville, FL

08/2003 – 02/2004

Java Developer

- Cleaned up an existing Web-Based software application that maintains Terrorist List using J2EE, HTML, Java, MVC 2, Struts 1.1 Framework, Oracle 9i and Eclipse.
- Made enhancements and fixed bugs for the Web application. Reviewed existing application architecture and Code. Suggested modifications for better performance.
- Modified and developed HTML, Java, JSP, DAO, Value Objects (DTOs), and SQL codes. The application was connected to Oracle 9i and runs on HP Unix box.
- Used ANT to build and deploy the application on the Oracle 9i Application Server and WebLogic 7 application server and used Eclipse for the development purposes.
- Developed Data conversion program using Java to load data from SQL Server to Oracle database. Developed Junit test cases for unit tests. Used CVS for version control.

US Department of Veteran Affairs, Bay Pines, FL (Information Gateway) 06/2003 to 07/2003
Consultant

Redesigned a Web-Based Patient Lookup Application for the Veterans Hospitals (VHA) at Tampa bay, FL (Bay Pines) using Java/J2EE, Struts 1.1 Framework and Oracle Database technology. Worked in a team to modify and upgrade the application. Developed Presentation, Application, Service, Domain and Persistence Layers using Java, JSP, Java Beans, DAOs and SQLs using JDBC and JNDI datasource. Used MVC2, Façade, DAO, Command, Front Controller, etc Design Patterns. Used HL7 messages for data transfer from one system to another. Used Visual Source Safe for source control. Interfaced with Vistalink for getting information from other system. Development tools were JDeveloper, Eclipse, Oracle 9i database and Oracle Application server (OC4J) in a Windows NT environment and the production was running on HP Unix.

Benefit Harbor, Frisco, TX (Resulte Universal)

04/2003 to 05/2003

Consultant

- Worked on modifications to a B2B **Web-based Health plan enrollment** software to be used by new employees. New employees for a company will be able to set up their own health insurance options once they get a new job by going into this website. SaaS (software as a service).
- Worked in a team to modify and upgrade the application. Developed Presentation, Application, Service, Domain and Persistence Layers using Java, JSP, Java Beans, DAOs and SQLs using JDBC and JNDI datasource. Used MVC2, Façade, DAO, Command, Front Controller Design Patterns. Developed reports using Jasper Reporting tool. Development tools were Eclipse and Oracle 9i and WebLogic Application server 7.0 and

the production was running on Sun Solaris box. Used Visual Source Safe for source control.

- Knowledge of both HL7 and HIPPA. Developed UI and backend code using HIPPA policies and procedures and compliance. Handled PHI and PII rules and resolved issues with HIPPA issues and reduced HIPPA violations.
-

EverBank of Florida, Jacksonville, FL
Java/J2EE developer

01/2003 - 04/2003

- This Java/J2EE based Web-Based Banking Software will customers to submit application to avoid foreclosure of the house.
- This is an existing application developed using MVC 2 design patterns. Used J2EE Best Practices which use the Main Controller Servlet for interacting with the pages.
- Used JNDI and JDBC to connect to Oracle database.
- Developed HTML, JSP, Servlet, Java Beans, JavaScript, Data access objects (DAO), SQLs, JSP custom tags. Tools used for development are IBM Websphere Application Developer for Java 4.0, WebSphere 4.0. Used (visual source safe) VSS for version control.

Blue Cross of Florida, Jacksonville, FL. (Tek Systems)
Java/J2EE Consultant

10/2001 - 12/2002

- EMPOWER (Online Member Enrollment System) . This Java/J2EE based Web-Based Software will allow employees to enroll into their Health, dental, etc. plans online.
- Partnered with **Accenture** team to build the system using MVC 2 design patterns. Used J2EE Best Practices which use the Main Controller Servlet for interacting with the pages.
- Designed and Developed UML Sequence and Class diagrams for each sub-system using Rational Rose. Used JNDI and JDBC to connect to DB2 and Oracle database.
- Developed HTML, JSP, Servlet, Java Beans, XML, JavaScript, Data access objects (DAO), SQLs, JSP custom tags. Tools used for development are Visual Age for Java 4.0, WebSphere 4.0. Used PVCS for version control.
- Developed custom Single Sign on API named TASPmiUser.jar using Java/LDAP to be used by other groups in IT departments to authenticate users trying to login from other WEB based applications.
- Developed a Java LDAP batch program to run every hour to synchronize user information among Peoplesoft HRMS, Mainframe and NT/AD system. Developed korn and bash shell scripts to run the programs. The application is running on AIX.

Texas Utilities, Dallas, TX (Compuware Corp)
Senior Java developer

10/2000 to 09/2001

- Designed and developed large Web-based software for Online Bill Payment for TXU using Java/J2EE technology. The applications were for both Residential and Small business customers. Participated in the requirement analysis and detailed design and architecture of the project.
- Partnered with Accenture team to develop HTML, JSP, Servlet, Java Beans, JDBC code and JavaScript for the assigned module. Used custom CORBA objects developed by

EDOCS to connect to the Oracle 8i database using Visibroker 4.1. Also written a special Servlet to connect to Mainframe Database using Java-MQSeries API for account validation purpose.

- Supported designing the logical data model and create physical database tables in Oracle using Erwin tool. Developed complex Stored Procedures in PL SQL for Data Conversion using SQL Loader. Used WebSphere 4.0. on Sun Unix.
- Participated in the full lifecycle development (SDLC) of the project and successfully implemented the project.

Inteq Group, Dallas, TX (Realtime Consulting)

10/1999 to 09/2000

Java developer

- Developed Online Pharmacy Software using Java/J2EE technology to maintain details doctor, medicine, inventory, and patient and prescription information online. Developed HTML, JSP, Java Bean, Session, Entity Beans, which connects to the Oracle 9i database. Developed JavaScript code for data entry validations and error message display.
- Developed an Online Claim processing system using Java/J2EE architecture. Written business logic and transaction processing code using JSP, Servlet and Enterprise Java Beans. The whole architecture is composed of JSP, Session bean and Entity Bean, LDAP, HTML. The backend Database is Oracle 8i and DB2. The system is running on WebSphere Application Server and OS/390 and AIX. Used Visual Source Safe for Version control.
- The system is running on WebLogic Server 5.1 on Windows NT platform. Developed EDI interface for Processing Claims. Developed programs in JAVA to read XML files and populate the database using XML parsers. EDI transactions 278I, 278R, 275 and EDI X12.

AT&T, Richardson, TX (Realtime Consulting)

08/98 to 09/99

Programmer/Analyst

- Developed a Multi-Tier Client /Server software using Power Builder 6.5 with Oracle 8.0 database. It was developed for Southwestern Bell Wireless system so that the users can manage agreements and bill rates among their partners. Worked as part of the team to develop user interface screens. Written programs in PowerBuilder to validate business logic and rules.
- Written PL SQL, Stored procedures and Triggers in Oracle 8.0 that was called from client interface. Used PFC structure to build the whole application.
- Participated in the full lifecycle development of the project and successfully implemented the application. Designed logical database using Power-designer.

State of Texas, Criminal Justice Department, Austin, TX (TRW Inc.)

10/97 to 08/98

Programmer/Analyst

- Developed a Three-Tier Web-Based Java/J2EE based Software for the state of Texas for Fund management so that the users can manage, submit and review fund requests, and approvals, etc. from the State of Texas.

- Designed the application using UML and Rational Rose. Created logical and physical Database design. Developed user interface screens in JSP and Backend coding using Java 1.3, Java Beans, Servlets, Java Beans and Servlets to validate business logic and rules.
- Written PL SQL, Stored procedures and Triggers using Oracle 8.0 database as backend DB.
- Participated in the full lifecycle development of the project and successfully implemented the application.

US Department of Labor, Job Corps, San Marcos, TX (Cimarron consulting) 05/95 to 09/97
Programmer/Analyst

- Developed a Three-Tier Client /Server software for Job Corps Program so that the users can manage student enrollment for new and existing students. Worked as part of the team to develop user interface screens in Power Builder 5 with Informix 7.0 database.
- Written programs in PowerBuilder 4.0 to develop UI screens and validate business logic.
