

ASHRITHA PARUPATI

Texas, USA | +1 (970) 847-5234 | parupashri122@gmail.com | [LinkedIn](#)

Summary

Software Engineer with 4+ years of experience building scalable, high-performance applications using Java, Spring Boot, RESTful APIs, and event-driven architectures. Strong expertise in developing microservices, integrating Kafka-based messaging systems, and optimizing databases with PostgreSQL and JPA to deliver reliable, low-latency solutions. Proficient in frontend development with React.js, JavaScript, and TypeScript, and experienced in containerization and cloud-native deployments using Docker, Kubernetes, Jenkins, and AWS. Proven ability to collaborate in Agile environments, deliver production-ready systems, and support enterprise-scale platforms across insurance, banking, and digital payments domains.

Skills

- **Programming Languages:** Java (8/11/17), Python, C++17, JavaScript (ES6+), TypeScript, SQL, PL/SQL
- **Backend & Application Frameworks:** Spring Boot, Spring MVC, Spring Cloud, Spring Core (IoC, AOP), Spring Data JPA, Spring Security, Hibernate, JPA, JAX-RS, Flask, FastAPI
- **Frontend & Full-Stack Development:** Angular, React.js, Single Page Applications (SPA), HTML5, CSS3, jQuery
- **Cloud, DevOps & Infrastructure:** AWS, Azure, Docker, Kubernetes (EKS, Helm), Terraform, Jenkins, GitLab CI/CD, NGINX, Infrastructure as Code (IaC), Auto-scaling, Container Orchestration
- **System Architecture & Integration:** Microservices Architecture, RESTful API Design, Event-Driven Architecture, Apache Kafka, WebSockets, API Gateways, gRPC, Distributed Systems
- **Databases & Data Engineering:** Oracle, PostgreSQL, Snowflake, Redis, Database Design, Query Optimization & Tuning, Stored Procedures, Hibernate Criteria, Connection Pooling
- **Testing, Monitoring & Performance:** JUnit, Mockito, Selenium, pytest, Cucumber, Unit & Integration Testing, SonarQube, Grafana, Prometheus, Kibana, Logging & Monitoring, JVM Tuning, Multithreading
- **Methodologies & Practices:** Agile & Scrum, CI/CD, Test-Driven Development (TDD), Code Reviews, Performance Optimization, Legacy Modernization

Certification

- AWS Certified Cloud Practitioner
- Hacker Rank SQL (Advanced certificates)

Experience

Software Engineer

02/2024 – Present

Assurant | Remote, USA

- Engineered scalable RESTful microservices using Java, Python, Spring Boot, and Kafka, to process insurance policy lifecycle events, to reduce policy transaction latency by 35%, for policy operations and underwriting teams.
- Modernized legacy policy modules into Dockerized microservices, to enable Kubernetes-based deployments, to improve release frequency from monthly to bi-weekly, for platform engineering and DevOps stakeholders.
- Implemented event-driven workflows with Kafka and AWS MSK, Azure to decouple claims ingestion systems, to handle 1M+ events/day reliably, for claims processing and fraud detection systems.
- Developed responsive UI components using React.js and TypeScript, to streamline agent dashboards, to improve task completion time by 28%, for insurance agents and customer service teams.
- Optimized database interactions using JPA, PostgreSQL indexing, and query tuning, to improve API response times by 40%, for downstream policy and billing services.
- Automated CI/CD pipelines with Jenkins, Docker, Azure and AWS ECR, to enforce quality gates and automated testing, to reduce deployment failures by 30%, for engineering leadership and SRE teams.
- Collaborated in Agile Scrum ceremonies and production support rotations, to deliver features aligned with regulatory requirements, to maintain 99.9% service uptime, for compliance and business stakeholders.

Software Developer

08/2021 – 01/2023

Wipro Limited | Bengaluru, India

- Built enterprise-grade backend services using Java, Python, Spring Boot, and REST APIs, to support client-facing banking and insurance platforms, to serve 500K+ active users, for global enterprise clients.
- Integrated third-party services and internal systems using Kafka and REST adapters, to ensure reliable data synchronization, to reduce manual reconciliation by 25%, for client operations teams.
- Designed reusable frontend modules with React.js and JavaScript, to standardize UI behavior across applications, to improve development velocity by 20%, for distributed delivery teams.
- Enhanced application stability by implementing unit and integration tests using JUnit and Mockito, to increase code coverage beyond 80%, for quality assurance and release teams.
- Containerized application components using Docker, to simplify environment parity across dev and QA, to reduce environment-related defects, for project delivery stakeholders.
- Supported production deployments and issue triage under SLA constraints, to ensure timely resolution of P1 incidents, to improve client satisfaction scores, for end customers and account managers.

Software Developer

01/2021 – 07/2021

Paytm | Hyderabad, India

- Developed backend APIs using Java, Python and Spring Boot, to support digital payments and wallet features, to ensure secure and consistent transaction processing, for Paytm consumer platforms.
- Implemented input validation and error-handling mechanisms, to improve API resilience, to reduce runtime exceptions by 20%, for high-volume transaction services.
- Contributed to frontend enhancements using JavaScript and React.js, to improve checkout and wallet UI flows, to reduce user drop-offs, for end users and product teams.
- Optimized SQL queries and database interactions, to improve transaction retrieval speed, to support peak traffic scenarios, for payment reconciliation systems.
- Participated in code reviews and sprint planning sessions, to align feature delivery with business goals, to ensure rapid iteration cycles, for engineering and product stakeholders.

Education

Master of Science: Computer Science

Midwestern State University

12/2024

Texas, USA
