

SRUSHTI MAHENDRA JAGTAP

New York | +1 (929)689-4619 | sj4182@nyu.edu

SUMMARY

Front-End Developer with over 1 year of experience building responsive UI components using React, Next.js, Vue.js, JavaScript, TypeScript, HTML, and CSS. Skilled at optimizing performance and UX flows, improving load times and user engagement through real-time features. Passion for designing clean, intuitive web interfaces and collaborating closely with product teams.

EDUCATION

New York University, Tandon School of Engineering, NY

May 2025

Master of Science, Computer Science (GPA: 3.9/4.0)

- **Coursework:** Machine Learning, Machine Learning in Cyber Security, Cloud Computing and Big Data, Real Time embedded system, Deep Learning, Computing Systems Architecture, Data Structure and Algorithm

Vivekanand Education Society's Institute of Technology, India

Aug 2023

Bachelor of Technology, Electronics and Telecommunication Engineering (GPA: 9.17/10)

RELEVANT EXPERIENCE

LOCOMEX, CG Global | *Software developer*

Jul 2025

- Supplier Pylon - Built a Django-based business intelligence platform with responsive HTML/CSS interfaces for managing RFPs (Request for Proposals), enabling suppliers to track opportunities, analyze market trends, and optimize capture planning. Implemented multi-factor analytics (risk, compliance, past performance, diversity, ESG) to deliver predictive win-rate insights, helping companies make smarter bid/no-bid decisions and improve business development outcomes.
- DivedIn integrates multi-source data-including Thomson Reuters API for adverse media, social media sentiment analysis, government sanctions, contract performance, and data points from Supplier Pylon and ESG scoring tools-to deliver a comprehensive Compliance Risk Score. It provides real-time risk assessments via AWS RDS APIs and generates automated PDF compliance reports featuring detailed risk commentary, compliance percentiles, and monitoring recommendations. This holistic approach empowers organizations to manage supplier diversity, optimize procurement decisions and reputational risks effectively.

The Futeur | *Lead Software Developer*

Jan 2025 - May 2025

- Architected Futeur Shield, a Hyperledger Fabric-based data management platform with Vault, Raft, and Kafka-driven event sourcing, boosting security, transparency, and increasing analytics-driven customer retention by 70%.
- Developed advanced security systems (OSSEC HIDS, Wazuh, Suricata IDS/IPS), achieving 60% fewer false positives and 45% greater detection accuracy of security breaches.
- Built backend microservices with Prisma ORM, PostgreSQL, Jenkins, and Nginx using design patterns, exposing a unified Swagger/OpenAPI contract to streamline CI/CD automated tests, improving performance by 40% and reducing deployment errors by 75%.
- Implemented CRYSTALS-Kyber and Dilithium post-quantum cryptography, ensuring 100% NIST compliance, reducing vulnerabilities by 85%, and achieving 99.9% data protection through Agile/Scrum sprints, peer code reviews, and test automation.
- Delivered scalable frontend solutions using Next.js and React Native, collaborating with design teams in Figma to refine UI/UX design, and implementing load balancing and CDN strategies to boost user experience, reduce latency, and optimize performance across web and mobile platforms.

GeauxTV. Network | *Software Developer*

May 2024 - Jan 2025

- Optimized 5+ React components using CSS modules to accelerate load times, streamline pop-up interactions, and integrate bot support, enhancing media player functionality for a seamless user experience.
- Improved UI design of the user profile section by implementing real-time inbox and messaging features using Firebase and semantic HTML, incorporating user feedback to boost engagement.

NYU | *Software Developer and Assistant*

May 2024 - May 2024

- Developed a web application for the Projectile Penetration Prediction Tool (3PT) project using React, Python, and machine learning libraries, leveraging deterministic and stochastic analysis to predict penetration depth and support geotechnical burial depth estimation, while applying UI/UX design principles for intuitive user workflows.

ACADEMIC PROJECTS

CleverConnect - GitHub Actions, Slack, WebSockets, Google Calendar, Trello, Gmail, Ollama Github

- Implemented a Slack-integrated bot interface using WebSockets to facilitate real-time communication with the app, linking it with GitHub Actions for CI/CD pipelining, Google Chat, Gmail, and Trello to centralize task and workflow management.
- Automated email processing to extract and summarize meeting details, triggering Trello reminders or manual task creation, streamlining task tracking and ensuring consistent updates across communication channels.

TaleWeaver - AWS Services, PHP, OpenAI, Rekognition, DynamoDB Github

- Built a web application using PHP, HTML, and CSS to convert user-uploaded images into AI-generated stories, incorporating routing, session management, and user authentication to enable account separation and reduce response time by 30%.
- Utilized AWS Rekognition to process images and extract labels, which were then sent to OpenAI APIs for automated story generation.
- Architected distributed storage, index, and query systems backend storage with DynamoDB to ensure fast retrieval of user data and stories, while deploying on AWS EC2 to provide scalable, reliable access and support personalized content summarization.

SKILLS AND COMPETENCIES

- **Web Technologies:** Full-stack, React native, Next.js, Vue.js, svelte.js, Rest API, Node.js, Amazon Web Services, Google cloud services, Azure, Kubernetes, Git, Bitbucket, Web Scraping, Web Sockets, Docker, Github Actions, Spring Boot, Django, CSS, HTML
- **Programming Languages:** Python, Java, C++/C, JavaScript, TypeScript
- **Operating Systems:** Linux, Ubuntu, Windows, MacOS
- **Data Management:** MySQL, Big Data (Hadoop and Spark), NoSQL, MongoDB, DynamoDB, Apache Airflow, ETL Tools, Aws CodeBuild
- **Design & UX:** Figma, UI/UX Design
