Rachel Beacham

Fullstack Software Engineer

SUMMARY

Full-Stack Software Engineer with 4+ years of experience delivering end-to-end features across front-end, back-end, and infrastructure layers. Strong background in React, Node.js, Python, and relational databases, with a proven ability to own projects from concept through production in SaaS and data-driven environments.

TECHNICAL SKILLS

Front End: JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind

Back End: Node.js, Python, PHP/Laravel, Express, REST & GraphQL APIs

Databases: PostgreSQL, MySQL

Cloud & DevOps: AWS, Docker, CI/CD, Linux

Tools: Git/GitHub, Jira, Confluence, Sentry, Figma

PROFESSIONAL EXPERIENCE

MFour Data Research

Apr '21 - Present

Software Engineer II | Jan 2025 – Present

Software Engineer I | Jan 2022 – Jan 2025

Application Support Engineer | April 2021 - Jan 2022

SaaS platform

- Led a complete redesign of the user signup and login experience using **React** and **TypeScript**, improving first-time user engagement and onboarding.
- Seamlessly enabled credit card-based SaaS platform subscriptions via **Stripe API integration** using **Node.js** and **React**
- Built and maintained **Salesforce API integrations** for Contacts, Accounts, and Opportunities, improving data synchronization between systems.
- Automated user subscriptions and platform access with **Salesforce and Stripe webhooks**, driving **JavaScript** backend scripts
- Implemented **reusable**, accessible UI components aligned with modern design standards, improving development velocity and UI consistency.
- Utilized atomic state management library, **Jotai**, alongside **Redux** to dynamically hold and update user specific settings and data
- Designed and implemented **PostgreSQL** schemas to support global, user-specific data filtering across the application.
- Developed an **interactive chat-based interface** enabling conversational access to market research insights powered by OpenAI.

Client Facing API

- Designed and implemented a client-facing API using **Python** and **PHP** to dynamically generate surveys based on client-defined specifications.
- Built **Python**-based algorithms to construct statistically valid target audiences using demographic quotas and business rules.
- Utilized **PHP** to construct surveys and their prerequisites within our internal platform, allowing project visibility for the operations team
- Reduced manual operational effort by **~50%** through API-driven automation of survey creation, targeting, and deployment workflows.
- Integrated **MySQL** databases to manage survey definitions, prerequisites, and panelist response data at scale.

Day to Day

- Leveraged **Docker** for local development and upkeep of our internal platform, SaaS platform, and mobile application
- Employed **Agile Methodologies** to ensure consistent sprint-by-sprint productivity, maintaining **story point volatility below 15%**
- Developed and sustained comprehensive **automated unit test suites** to fortify platform reliability.
- Independently identified and **resolved critical production issues**, maintaining platform reliability and fast recovery times.
- Collaborated with cross-functional remote teams on technical planning and **end-to-end implementation** of complex features.
- Supported multiple **AWS-hosted environments** (test and production), ensuring reliability and smooth deployments.

EDUCATION

Bachelors Degree

University of California, Santa Barbara

Accelerated Full Stack Web Development Program

LearningFuze, Irvine CA

- 800+ total hours programming (70 hours/week) in a simulated work environment
- Received mentorship from senior developers while meeting tight project deadlines
