Summary

Entry-level Software Engineer with experience in automating processes to reduce workloads and improve incident response times. Successfully led a team to optimize system performance and built tools for enhanced data management and cost reduction. Eager to leverage software engineering skills to improve operational efficiency and deliver effective solutions.

EDUCATION

Miami University - Oxford

Bachelor's, Software Engineering

Jan 2021 - May 2024

PROFESSIONAL EXPERIENCE

PNC Financial Services

Software Engineer

Oct 2024 - Present

Chicago, IL, USA

- Automated renewal of 50+ certificates yearly, cutting manual workload by 30% and ensuring full compliance.
- Managed and tracked an average of 15-20 incidents per month using Dynatrace and ServiceNow, improving incident response time by 20%.
- Led weekly DPP meetings with 10+ engineers to improve systems, resolve incidents, and optimize performance.

Verne

Software Developer Intern

Jun 2023 - Aug 2023

Cleveland, OH, USA

- Built SQL scripts to filter and load CSVs, improving user data organization by 20%.
- Reduced manual testing efforts by 30% by implementing 25 automation tests with JavaScript and Playwright.
- Managed Git/Bitbucket repos and wrote docs, reducing onboarding time by 30%.

90West Data

Software Engineer Intern

Jul 2022 - Aug 2022

Cleveland, OH, USA

- Designed Python tool to email updates on S3 changes, reducing manual checks by 45%.
- Utilized AWS Lambda for server-less compute, achieving a reduction in infrastructure costs while ensuring seamless and scalable execution of daily tasks without manual execution

PROJECTS & OUTSIDE EXPERIENCE

TechnoBrawl

Present

undefined

- As the sole developer, built seamless robot-to-vehicle transformation system in Unity to enhance gameplay.
- Implemented a secure authentication framework that accesses and stores player data, reducing average authentication failure rate to 0%.
- Devised a customization system with object oriented programming that allows users to earn and utilize in-game customization options, promoting self-expression.

IoT Smart Litter-box/Application

Present

undefined

- Developed an IoT smart cat litter-box in a team of 5, integrating weight sensor technology for real-time monitoring of cat waste weights.
- Implemented connectivity to a .NET MAUI application, enabling seamless interaction and data visualization for both cat and user data.
- Utilized Amazon AWS for secure storage and retrieval of cat and user data, ensuring reliability and accessibility across multiple devices.

SKILLS

- C++, Data Structures & Algorithms, Calculus, Python, Linux, Operating Systems, Machine Learning, AWS, SQL, C#, JavaScript, TypeScript, Playwright, React Native, ServiceNow, Dynatrace
