SUMMARY

Software Engineer with 3+ years of experience in Java backend development using Spring Boot and RESTful APIs. Skilled in designing and maintaining scalable microservices and integrating databases for enterprise applications. Proven ability to improve system reliability and streamline CI/CD deployments in Agile teams. Seeking to contribute clean, maintainable code and collaborate on innovative software solutions.

EDUCATION

Illinois Institute of Technology

Dec 2024

Master of Science, Computer Science

- GPA: 3.8/4.0

EXPERIENCE

Bitstack Technologies

Sep 2025 - Present

Software Engineer

USA

- Worked on Java Spring Boot backend services for enterprise web applications supporting multiple internal business workflows, leveraging algorithms to optimize process efficiency.
- Designed, implemented, and maintained RESTful APIs using Spring MVC and Spring Data JPA following standard API design practices, optimizing data structures for request handling.
- Implemented core business logic, request validations, and global exception handling to improve system reliability and consistency.
- Supported Docker-based deployments and bi-weekly CI/CD release cycles
- Improved API stability by reducing error and validation failures by ~15% through better exception handling.

Cisco Systems

Aug 2024 - Sep 2025

Software Engineer

IL, USA

- Developed and enhanced REST APIs enabling service-to-service communication across 6–8 microservices written in Java and C++, improving interoperability.
- Implemented JWT-based authentication and role-based authorization for secured internal APIs using Node.js and TypeScript libraries.
- Integrated backend services with AWS EC2 and S3, supporting cloud-hosted deployments
- Supported Jenkins CI/CD pipelines and Docker builds, helping reduce manual deployment effort.
- Collaborated closely with cross-functional teams to design and implement Java Spring Boot microservices for internal platforms.

Wipro

Jan 2022 - Dec 2022

Software Engineer

India

- Developed Java backend components using Spring Boot and Hibernate across 3 enterprise application modules.
- Built RESTful web services supporting internal business workflows and system integrations.
- Optimized SQL queries and indexing, reducing database response time by ~20% for key screens.
- Wrote unit tests using JUnit, achieving 60–70% coverage for assigned modules.
- Automated testing workflows using JUnit and Maven, increasing coverage and reducing manual testing effort.
- Participated in Agile sprint planning, reviews, and code reviews with senior engineers

TECHNICAL SKILLS

- **Languages:** Java, SQL, C++
- **Backend Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Node.js
- **Frontend Technologies:** React, Typescript
- **Databases:** MySQL, PostgreSQL, MongoDB, NoSQL
- **Web Services:** REST APIs, JSON
- **Cloud Platforms:** AWS (S3, EC2, SageMaker), GCP (Vertex AI), Azure (App Services, Storage), Google Cloud Platform
- **Deployment:** Visual Studio, Visual Studio Code, Git, Docker, Jenkins, JUnit, PyTest, Jira, Linux, Terraform, Kubernetes
- **J2EE Technologies:** Servlets, JSP, JSTL, JavaBeans, JDBC
- **Concepts:** CI/CD, OOP, Agile Development, SDLC, Waterfall, Data Structures, Algorithms

PROJECTS AND CERTIFICATIONS
