EDUCATION

Master of Science in Computer Science
The State University of New York – New Paltz, NY

Aug 2022 – Dec 2023

TECHNICAL SKILLS

Programming Languages: C, C#, Java, JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
Frontend Frameworks: React.js, Angular, Redux, Bootstrap, Material-UI
Backend Technologies: Spring Boot, Node.js, Express.js, RESTful APIs, Microservices Architecture, JWT & OAuth 2.0
Cloud Technologies: AWS, Microsoft Azure (AKS, Azure DevOps), Docker, Kubernetes, CI/CD Pipelines
Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis
Tools and IDEs: VS Code, Visual Studio, IntelliJ IDEA, Postman, Jenkins, Docker, Git, GitHub, GitHub Actions
Development Practices: Agile/Scrum, Code Reviews, Design Patterns, Cross-Browser Compatibility, Accessibility (WCAG), Secure Coding Practices

PROFESSIONAL EXPERIENCE

Software Engineer – NorthStar Retail Solutions Jan 2024 – Present

- Designed and maintained scalable, cloud-native applications using React.js, TypeScript, and C# REST APIs, improving UI responsiveness by 35%.
- Deployed and orchestrated containerized microservices via Docker and Azure Kubernetes Service (AKS), achieving high availability and resilience across distributed workloads.
- Integrated Azure Functions and Event Hubs for real-time data streaming and automation, enabling low-latency system updates.
- Implemented security and compliance features using OAuth 2.0, JWT, and RBAC, aligning with Microsoft Cloud Security and Zero Trust standards.
- Automated CI/CD pipelines using Azure DevOps and Jenkins, reducing deployment errors and manual release time by 30%.
- Enhanced system observability using Azure Application Insights and Grafana, improving root cause analysis and uptime reliability.
- Collaborated cross-functionally in Agile/Scrum environments to deliver high-quality features, conducting peer code reviews and sprint retrospectives.
- Tech Stack:** C#, React.js, TypeScript, Redux, .NET Core, RESTful APIs, Azure App Services, Azure Kubernetes Service (AKS), Docker, Jenkins, Azure DevOps, Application Insights, Grafana, SQL, Git, Agile/Scrum

Software Engineer – Infosys (Client) Aug 2021 – Jul 2022

- Developed backend APIs and microservices using Java, C#, and Spring Boot, supporting enterprise-scale financial analytics systems.
- Optimized SQL and NoSQL queries, reducing data access latency by 25% across distributed cloud environments.
- Engineered multi-tenant, event-driven systems using Kafka and Azure Service Bus, achieving high-throughput message processing.
- Built and integrated cross-platform applications with Angular and .NET Core, improving usability and compatibility across Windows, macOS, and Linux.
- Strengthened cloud-based infrastructure with Azure App Services, Load Balancers, and auto-scaling groups, ensuring 99.9% uptime.
- Streamlined DevOps operations with Git, Bitbucket, and Azure Pipelines, increasing CI/CD reliability and release cadence.
- Applied unit testing (JUnit, MSTest, Selenium) to achieve 95%+ code coverage, ensuring software quality and maintainability.
- Tech Stack:** Java, C#, Spring Boot, Angular, JavaScript, HTML5, CSS3, REST APIs, Kafka, Jenkins, SQL, NoSQL, Docker, Git, Agile/Scrum

PROJECT

Retail Analytics & Inventory Management Platform | Java, React.js, Spring Boot, MySQL, Docker, AWS

- Developed a full stack dashboard for product tracking inventory, sales metrics, and analytics with real-time visual insights.
- Built secure and modular RESTful APIs using Spring Boot, ensuring seamless data communication and reliable backend performance.
- Implemented role-based dashboards for admins and managers using React.js.
- Deployed the full-stack application using Docker containers on AWS EC2, achieving scalable and cost-efficient infrastructure with automated build pipelines.

Hospital Appointment & patient management System | Angular, Flask, PostgreSQL, Azure

- Designed an interactive scheduling platform that allows patients to book, reschedule, and track appointments through a responsive Angular interface.
- Developed Flask-based backend APIs for managing doctor availability, appointment data, and user authentication using PostgreSQL as the primary database.
- Implemented secure user login and notification modules, and deployed the system on Azure App Services for improved performance and 99.9% uptime reliability and high availability.
