PROFESSIONAL SUMMARY

Lead Full-Stack Software Engineer with 13+ years of experience architecting, modernizing, and delivering enterprise-scale web and cloud platforms across React, Angular, Node.js, and .NET Core ecosystems. Own complete system delivery from discovery and architecture through implementation, CI/CD automation, cloud deployment, and long-term production support.

Specialize in designing scalable, workflow-driven systems using microservices and micro-frontend architectures that enable independent team ownership, faster release cycles, and highly maintainable codebases. Consistently modernize legacy monoliths into cloud-native distributed systems across Healthcare, Insurance, and regulated enterprise domains.

Operate comfortably across frontend, backend, database, and infrastructure layers within the same sprint. Recognized for strong architectural judgment, high ownership, pragmatic trade-offs, and delivering reliable solutions that scale for thousands of users.

Build it. Lead it. Ship it. Support it. Improve it.

CORE LEADERSHIP STRENGTHS

- System Architecture & Technical Design
 - Microservices & Micro-Frontend Platforms
 - Enterprise Modernization & Legacy Migration
 - Cloud-Native Engineering (Azure & AWS)
 - Full-Stack Ownership (UI → API → DB → Cloud)
 - DevOps Automation & CI/CD Strategy
 - Performance & Scalability Optimization
 - Production Reliability & Incident Response
 - Agile Delivery & Technical Mentorship
-

TECHNICAL SKILLS

Frontend Engineering

React, Angular 2–19, TypeScript, JavaScript (ES6+), Redux, MobX, RxJS, Micro-Frontends, Module Federation, SPA architecture, HTML5, CSS3, Material UI, Bootstrap

Backend Engineering

Node.js, Express, .NET Core, ASP.NET Web API, C#, REST APIs, GraphQL, Python/FastAPI

Databases

SQL Server, PostgreSQL, Oracle, relational design, stored procedures, indexing strategies, query optimization, performance tuning

Cloud & Infrastructure

Azure (App Services, Functions, DevOps, Storage),
AWS (Lambda, EC2, S3, EventBridge, Glue),
Docker, Kubernetes, serverless architectures

DevOps & Testing

GitHub Actions, Azure DevOps, Jenkins, CI/CD pipelines, Jest, Playwright, Cypress, xUnit, NUnit, E2E automation

Architecture

Microservices, Micro-Frontends, SOA, API gateways, event-driven systems, distributed systems, secure design

PROFESSIONAL EXPERIENCE

PROGRESSIVE INSURANCE

Senior / Lead Full-Stack Engineer — Enterprise Claims & Policy Platforms

2018 – Present

Architecture & Platform Modernization

- Architect scalable React and Angular SPA ecosystems using micro-frontend architecture and modular domain boundaries

- Decompose monolithic UI into independently deployable feature modules using module federation
 - Define service boundaries, domain models, and API contracts for microservices
 - Modernize legacy mainframe/monolithic systems into cloud-native distributed architectures
 - Establish frontend/backend standards, coding guidelines, and engineering best practices
 - Lead design reviews and cross-team architectural decisions
 - Architect and develop Blazor WebAssembly and Server applications for internal enterprise portals
 - Integrate Blazor components with .NET APIs and shared authentication services
 - Modernize legacy MVC/Razor applications into Blazor-based SPA experiences
 - Optimize Blazor rendering performance and state management for large datasets
-

Backend & Services Engineering

- Design and implement high-throughput REST/GraphQL APIs using .NET Core and Node.js
 - Model complex workflow engines and asynchronous business processes
 - Implement orchestration services and event-driven integrations
 - Optimize SQL Server performance for high-volume transactional workloads
 - Enforce secure design patterns including authentication, RBAC authorization, and auditing
 - Integrate internal enterprise systems and external third-party services
-

Frontend Engineering

- Deliver large-scale Angular and React applications supporting operational workflows
- Design reusable component libraries and shared design systems
- Implement advanced state management using Redux/MobX/RxJS

- Optimize rendering performance for dashboards and large datasets
 - Improve usability by streamlining multi-step business processes
 - Reduce operational friction through intuitive UX improvements
-

Cloud & DevOps Engineering

- Containerize services using Docker and deploy to Azure and AWS
 - Architect CI/CD pipelines using Azure DevOps and GitHub Actions
 - Automate builds, tests, deployments, and rollbacks
 - Implement blue-green and canary release strategies
 - Configure monitoring, logging, and alerting for production observability
 - Improve release frequency while reducing production incidents
-

Ownership & Leadership

- Lead initiatives from discovery through production rollout
 - Mentor developers and conduct code reviews
 - Partner with product, operations, and business stakeholders
 - Troubleshoot critical production incidents and deliver rapid fixes
 - Drive continuous improvement in reliability, performance, and maintainability
 - Serve as technical lead across multiple parallel projects
-

UNITEDHEALTH GROUP — Healthcare Domain

Senior Application Engineer

2016 – 2017

Architect and deliver secure healthcare workflow systems supporting clinicians, operations teams, and caregivers.

- Design Angular + .NET Web API caregiver portals

- Translate clinical and operational workflows into scalable solutions
 - Implement compliant, secure software aligned with healthcare regulations
 - Design relational database schemas and reporting pipelines
 - Automate deployments and testing
 - Support production systems with rapid issue resolution
 - Collaborate directly with clinicians to improve workflow efficiency
-

R-LOGIC

Senior Software Engineer

2012 – 2015

- Architect enterprise WinForms and ASP.NET applications
 - Design SQL Server databases and analytics/reporting systems
 - Lead requirements gathering and technical documentation
 - Deliver dashboards and BI solutions
 - Provide production support and performance tuning
-

MINDTREE

Software Engineer

2008 – 2012

- Develop enterprise .NET applications and integrations
- Build database/ETL solutions
- Support full SDLC lifecycle
- Collaborate across distributed teams
