SUMMARY

Results-driven Software Engineer with 4+ years of experience delivering enterprise-scale, cloud-native applications across banking, fintech, and SaaS domains. Proven expertise in Java, Python, JavaScript, and SQL, with a strong focus on microservices, REST APIs, cloud infrastructure, and DevOps automation. Hands-on experience supporting \$1B+ financial transaction systems, building high-availability platforms (99.9% uptime), and driving cost savings in millions of dollars through cloud optimization and automation. Adept at AWS & Azure, CI/CD, Generative AI, and secure software development aligned with PCI-DSS, GDPR, and SOC-2 standards.

SKILLS

- **Programming Languages:** Java, Python, JavaScript, SQL, PL/SQL, HTML5, CSS3
- **Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, Flask, Node.js, Express.js, React.js, Angular, REST APIs
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, SQS, ECS, Aurora, Route53, CloudWatch), Microsoft Azure (VMs, Blob Storage, Azure Functions), Docker, Kubernetes, Jenkins, Azure DevOps, CI/CD, Infrastructure as Code
- **Databases:** Oracle, MySQL, PostgreSQL, SQL Server, MongoDB, DynamoDB, Redis, NoSQL, Data Modeling, Query Optimization
- **Architecture:** Microservices, Event-Driven Architecture, API Gateway, Serverless, High-Concurrency Systems, Distributed Systems
- **Testing & Quality:** JUnit, Mockito, Pytest, Selenium, TestNG, Cypress, TDD, BDD, Agile/Scrum, SDLC
- **Security & Compliance:** PCI-DSS, GDPR, OAuth2, JWT, Encryption, Secure APIs
- **AI / ML:** Generative AI, OpenAI API, LangChain, Hugging Face, PyTorch, Anomaly Detection, Predictive Analytics

WORK EXPERIENCE

Goldman Sachs, FL | **Software Engineer**

May 2024 – Current

- Led the design and delivery of a cloud-native digital banking platform supporting \$1B+ in annual transactions, achieving 99.99% availability, high fault tolerance, and full compliance with PCI-DSS, GDPR, and SOC-2 in a regulated enterprise environment.
- Architected and deployed 12+ enterprise-scale RESTful APIs using Java, Spring Boot, Spring Security, and Hibernate, enabling 100K+ daily active users and sub-second response times for high-throughput financial transactions.
- Designed a distributed microservices architecture leveraging Spring Boot, Node.js, AWS SQS, and event-driven messaging, reducing peak-time transaction latency by 35% and improving system scalability under heavy financial workloads.
- Built a modern Angular-based customer portal with 15+ reusable, ADA-compliant UI components, increasing customer engagement by 25%, reducing support tickets, and accelerating front-end delivery timelines.
- Automated fraud detection, compliance reporting, and transaction analytics pipelines using Python and SQL, reducing manual audit effort by 70%, strengthening regulatory readiness, and improving real-time risk monitoring.
- Implemented AWS serverless and cloud-native solutions using Lambda, S3, SQS, and CloudWatch, improving platform scalability and fault tolerance while cutting infrastructure costs by \$500K annually (30%).
- Designed and maintained enterprise CI/CD pipelines with Jenkins, Docker, Kubernetes, and automated testing, shortening release cycles from 2 weeks to 2 days and achieving a 99% deployment success rate.
- Developed an AI-powered internal engineering assistant using Generative AI and LLM-based workflows, accelerating developer onboarding by 40% and saving 1,000+ engineering hours per year.

LTI Mindtree, India | **Software Engineer**

April 2021 – July 2023

- Architected and deployed 20+ production-grade RESTful APIs using Python and Flask, modernizing legacy systems and integrating with Azure cloud platforms, supporting mission-critical enterprise operations with 99.9% uptime and SLA compliance.
- Built scalable React.js web applications for internal and customer-facing portals, reducing end-user task completion time by 30% through optimized UI workflows, reusable components, and improved user experience.
- Implemented Redis caching and performance optimization strategies for high-traffic dashboards, achieving a 25% reduction in response time and 80% decrease in database load, enabling near real-time analytics.
- Automated Azure infrastructure provisioning using Virtual Machines, Blob Storage, and Azure Functions, processing 2.5M+ events per month, cutting environment setup time from days to minutes, and reducing annual operating costs by \$2,000+.
- Optimized cloud storage and compute utilization, redesigning Blob Storage tiers and VM usage patterns to deliver an 18% reduction in infrastructure costs and improved cloud efficiency across multiple applications.
- Designed and maintained CI/CD pipelines using Azure DevOps, integrating automated builds, testing, and deployments to cut release cycles by 50%, improve deployment reliability, and save 11+ engineering hours per week.
- Integrated automated testing frameworks (Pytest, Selenium) into CI pipelines, increasing regression test coverage from 65% to 90%, reducing post-production defects, and improving release stability.
- Developed and deployed machine learning and Generative AI solutions using PyTorch, including anomaly detection, predictive analytics, and AI-driven code review automation, reducing manual review effort by 25% and improving code quality and security.

EDUCATION

Master of Science in Computer Science, University of South Florida, Tampa, Florida

Bachelors Computer Science and Engineering, SRKR Engineering College, Andhra Pradesh, India

PROJECTS

Re-Market – Full-Stack Resale Marketplace: *React.js, Node.js, Express.js, MongoDB, RESTful API Development, Mobile-Responsive Design, Real-Time Bidding Systems, Docker, CI/CD Pipelines*

Nexmart - Full-Stack E-Commerce Web Application: *Progressive Web Applications (PWAs), Mobile-Responsive Design, Node.js, RESTful API Development, DynamoDB (NoSQL Database), Redis, Docker, Infrastructure as Code (IaC), Historical Data Storage*
