

SUMMARY

Graduating **Bachelor's in Computer Science** seeking new graduate and entry-level **Software Engineering** roles, with hands-on experience in **full-stack, backend, and cloud development** using **Python, Java, React, and FastAPI**. Experienced in designing **scalable, secure, and data-driven systems** through impactful internships and projects. Passionate about building **reliable, user-focused software solutions** that combine engineering precision with innovation.

EDUCATION

Bachelor of Science in Computer Science

August 2022 - May 2026

Arizona State University, United States

GPA: 3.74/4.00

Courses: Data Structures & Algorithms, Object-Oriented Programming, Principles of Programming, Software QA & Testing, Computer Organization & Assembly, Operating Systems, Information Assurance, Foundations of Machine Learning, Database Management Systems, Theoretical Computer Science, Human Computer Interaction

TECHNICAL SKILLS

Languages & Web Development: Python, Java, C, C++, C#, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks & Libraries: React.js, Angular, Django, Flask, Spring Boot, FastAPI, .NET, React Native, Expo Router

Data & Analytics: MySQL, PostgreSQL, MongoDB, SQL Server, Power BI, Tableau, Excel (Pivot Tables, Dashboards)

Cloud & Platforms: Docker, Kubernetes, Google Cloud Platform (GCP), AWS, Railway

Tools & Concepts: Git/GitHub, VSCode, IntelliJ, Cursor, Unix/Linux, Distributed Systems, Message Queues (Celery/Redis)

PROFESSIONAL EXPERIENCE

Chasqui AI | Software Development Intern(Full-Stack & Mobile)

Tempe, AZ | January 2025 - December 2025

- Engineered a production-ready onboarding chatbot using **Next.js** and **TypeScript** that captured user intent in under three interactions, generated structured summaries, and improved onboarding efficiency and adoption for 80+ users.
- Implemented multi-provider **OAuth2** authentication with **NextAuth.js** and **JWT sessions**, reducing manual entry time by 50%, resolving login flow bottlenecks, and improving account security for all new signups.
- Designed and integrated secure file upload workflows with AI-based parsing and **PostgreSQL + Prisma ORM** storage, automating resume parsing and enabling structured, queryable data management across the system.
- Optimized **enrichment pipelines with caching + API integration**, improved accuracy while reducing latency by 35%, and enhanced UX with progress indicators, error handling, and guided user flows.
- Extended contact enrichment and management features to the mobile app, integrating **REST APIs, JWT-based auth, and enriched field rendering** (industry, location, social links) to achieve feature parity with web.
- Ported core Contacts and Details pages from web to **React Native using Expo Router**, unified UI theming across platforms, and resolved build and dependency conflicts to stabilize the mobile environment.
- Deployed and monitored backend services using **Docker, Google Cloud Platform (GCP), Railway, and Vercel**, integrating **CI/CD pipelines via GitHub Actions** to ensure automated deployments across environments.

Sac Industries | Software Engineering Intern

Ahmedabad, India | May 2024 - July 2024

- Built full-stack features for a box manufacturing company using **React, TypeScript, HTML, and CSS** on the frontend, and **Java, Spring Boot, and MySQL** on the backend, helping digitize manual workflows across departments.
- Collaborated on **REST APIs** and implemented role-based access control with **Spring Security**, ensuring secure and structured access to financial, inventory, and production data across user roles.

PROJECT WORK

Calorie Tracker Web App | React, Express.js, SQLite, Nutritionix API

- Built a full-stack nutrition management platform with secure authentication, profile management, and automatic calorie goal calculation using the Mifflin-St Jeor equation, enabling personalized tracking for users.
- Integrated the Nutritionix API for real-time food search and logging, implemented analytics with interactive charts, and delivered a mobile-first React interface that improved food logging speed by 40% and increased user retention by 25%.

TaskFlow: Distributed Task Scheduling System | FastAPI, Celery, Redis, PostgreSQL, Docker, Kubernetes

- Built a distributed task scheduling system using FastAPI, Celery, and Redis to manage asynchronous jobs with retries, priority queues, and idempotent execution, increasing throughput by 45% under concurrent load.
- Deployed scalable microservices with Docker and Kubernetes, integrating Prometheus and OpenTelemetry for observability and automated scaling, resulting in 30% faster job completion and improved system reliability.

AI-Powered Document Q&A System | FastAPI, React, LangChain

- Developed a Retrieval-Augmented Generation (RAG) web app enabling users to upload and query PDF documents, implementing automated text chunking, embedding generation, and vector-based similarity search for contextual retrieval.
- Built a responsive React + Tailwind interface with a FastAPI backend, integrating GPT-4 and local LLMs via LangChain to deliver natural language answers with citations, improving accuracy by 30% compared to baseline keyword search.

Scrapy-MongoDB Data Pipeline | Python, MongoDB, Docker

- Developed a data ingestion pipeline with Scrapy to crawl and parse structured content, implementing idempotent upserts and indexing in MongoDB to maintain 100% data consistency across multiple runs.
- Containerized the system with Docker Compose, added configurable environment variables, and implemented caching, throttling, and duplicate prevention, improving scraping throughput by 35% while ensuring reliable and scalable execution.
