SUMMARY

Full stack Java developer Around 4 years of experience building responsive web applications and RESTful microservices. Proficient in Spring ecosystem, React.js, and cloud technologies. Experienced in optimizing application performance, enhancing security implementations, and delivering solutions that improve user engagement and operational efficiency.

SKILLS

Methodologies: SDLC, Agile, MVC Architecture

Programming Languages: Java, Python, SQL, Java Script

Frontend Development: HTML5, CSS3, JavaScript, React.js, Typescript, Angular

Backend Development: Spring Framework (Spring Boot, Spring MVC, Spring Security), RESTful API, Hibernate

Database Technologies: MySQL, SQL Server, PostgreSQL, MongoDB

Cloud Platforms & DevOps: AWS, Azure, Docker, Kubernetes

Version Control and CI/CD pipelines: Git, BitBucket, Jenkins

Testing Tools: JUnit, Mockito, Postman API

Soft Skills: Problem-solving, Collaboration with cross-functional teams, Attention to detail, Excellent Communication

EDUCATION

Master of Science in Software Engineering | University of Houston Clear Lake, Texas

December 2024

Bachelors of Engineering | Panimalar Engineering College, India

May 2021

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | USAA, Texas

August 2024 - Current

- Developed responsive customer account dashboards using **React.js**, **TypeScript**, **HTML5**, and **CSS3**, resulting in a 30% improvement in user engagement and reduced customer support calls by implementing real-time account balance and transaction history features.
- Spearheaded real-time transaction monitoring using **Apache Kafka** and **Spring Batch** with comprehensive **JUnit** test coverage, integrating **Elasticsearch** for fraud detection analytics that improved suspicious activity detection time.
- Designed and implemented **RESTful microservices** with **Spring Boot**, **Spring MVC**, and **Hibernate ORM** that integrated with legacy banking systems and **SQL Server** databases, improving transaction processing speed through optimized **SQL queries**.
- Enhanced payment gateway security by implementing **Spring Security** with **OAuth2** authentication and **JWT** authorization, ensuring PCI-DSS compliance while maintaining the **MVC architecture** pattern for clear separation of concerns.
- Collaborated with DevOps and QA teams to design CI/CD pipelines using **Jenkins**, **Docker**, and **AWS EC2**, automating deployments for **Spring Boot microservices** and reducing production errors through rigorous code reviews and testing.

Full Stack Java Developer | Vivma Software Inc, India

July 2020 - December 2022

- Created responsive UIs using **React.js**, **TypeScript**, and **CSS3** for a Lead Management module in an enterprise CRM, leveraging component-based architecture to improve sales pipeline visibility by 25%.
- Designed and developed **RESTful APIs** using **Spring Boot** to integrate client systems with third-party services, reducing API latency through **PostgreSQL** query optimization and indexing.
- Optimized performance of microservices-based e-commerce platforms using **Spring Boot** and **Docker** by **reducing redundant database calls** and implementing **Redis caching via AWS ElastiCache**, cutting API response times during peak traffic.
- Partnered in **Agile Scrum** teams using **Jira** and, delivering sprint goals via CI/CD pipelines using **Jenkins** and **Kubernetes**, reducing defects.
- Built backend testing frameworks with **JUnit**, **Mockito** and frontend tests with **Cypress**, achieving 85% test coverage, and secured APIs using **Spring Security** to enforce authentication and data protection standards.

PROJECTS

Floating Point Calculator (Capstone Project):

- Created a robust enterprise application using the MERN stack and AWS services (EC2, S3, IAM, VPC), optimizing performance, scalability, and security for data storage and flow.
- Gained hands-on experience with DevOps tools like Jenkins and Terraform for streamlining automated deployment processes.
- Led team-based projects and implemented Agile methodologies to improve collaboration and efficiency in software development.
- Strengthened skills in data analysis through SQL and NoSQL databases, optimizing high-volume data systems for better performance.
