

Sri Vani R
srivani020511@gmail.com +1 539-819-0103

OBJECTIVE:

10+ years of experience and Full-Stack Developer with rich domain knowledge and practical knowledge of several IT technologies, I seek a career with challenging assignments to amalgamate personal enrichment with professional goals.

PROFESSIONAL SUMMARY:

- Experienced in working with various SDLC methodologies based on Agile/SCRUM, SAFE including TDD, Incremental and Iteration methodology, Pair Programming, and Agile Development.
- Extensive experience with Java and Spring Framework modules including Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Dashboard, Spring Boot, Spring Microservices, Spring, Spring Eureka, and Spring Netflix, SOLAR, REDIS.
- Created and managed MongoDB/NoSQL collections. Developed server-side automation using Node.js scripting and connecting different types of SQL and NoSQL databases.
- Ability to design components for Responsive Web Design (RWD) apps utilizing Angular 10, Bootstrap, and CSS4.
- Exposure to automation integration (conveyor systems, RF devices), EDI & other external applications with WMS.
- Experienced in leveraging Amazon Web Services (AWS) services such as EC2, Elastic Beanstalk, Cloud Watch, Cloud Front, Cloud Formation, IAM, S3, RDS, Elastic Cache, SNS, SQS, and AMI to help enterprises expand.
- Experienced with J2EE technologies such as EJB, XML, Spring 3/4/Boot, RMI, JMS, JDBC, Servlets, JSP, Hibernate, Web Services, JNDI, and Integration Skills in IBM Web Sphere.
- Experienced Spring Boot based Microservice using Docker container using Amazon EC2 container services and using Open Shift, AWS admin console.
- Extensive experience with relational databases like MySQL, PostgreSQL, and Oracle, as well as NoSQL databases like MongoDB and Cassandra.
- Experience in SOAP and Web Services such as JAX-WS and REST utilizing Spring Boot, Apache CFX, JAX-RS.
- Experience in Middleware persistent frameworks such as Hibernate/JPA Entities for mapping Java classes using Hibernate Query Language (HQL), HSQL Named Queries, Criteria, and Projections.
- Experience in utilizing Java EE design patterns including MVC, Singleton, Factory, Adapter, Service Locator, Session Facade, DAO, DTO, and Business Delegate in the creation of N-Tier distributed Enterprise Applications.
- Extensive expertise in designing applications based on Core Java principles such as OOPS, Multithreading, Collections Frameworks, Exception Handling, Data Structures, and JDBC.
- Skilled in creating and designing relational databases, specifically in Oracle 10 g/11g, SQL Server, DB2, Postgre SQL, and MySQL. Proficient in developing PL/SQL stored procedures and packages.
- Experienced with several web servers like Tomcat 8, Web Sphere 8.x/9.x, JBoss 7.1.0, and Web Logic 12.0.
- Expertise in using Apache Kafka and Zookeeper as messaging services and JMS.

TECHNICAL SKILLS:

Programming Languages	Java ,21,17,11,1.8/1.7/1.6, PL/SQL, C, C++, python, React 18, Angular- (8–17), HTTPS, JQuery1.8, jQuery UI, Angular JS, AJAX, JSON, Bootstrap, Angular2.0/6.0, React JS with Flux, Redux, Ember JS, Knockout JS, Backbone JS, Handlebar JS, NodeJS, Express JS, Hapi JS
Java/J2EE Technologies	Servlets, EJB, JSP, JSF, JDBC, SOAP, WSDL, REST, XML, JAXP, JAXB, JPA, JMS, Spring3.x/4.x/5.x, Hibernate, Spring MVC, Spring Boot, Spring Data, Spring Batch, Spring cloud, Dump Analysis.
Frameworks	Spring Boot, Spring Data JPA, Hibernate, Spring Security 3.2
Application/Web servers	Apache Tomcat 8, IBM Web Sphere 8.x/9.x, Web Logic 12c
Relational Databases	Oracle 10g/11g, SQL server 2012/2014/2016, MySQL 5.7, DB2 11.1, Postgres
NoSQL Databases	Mongo DB, Cassandra, Dynamo DB
Internet Technologies	HTML 5, JavaScript, CSS 3/4, jQuery, Ajax, Angular 10/9/8/6/4, Typescript, JSON, Power BI, Tableau, Snowflake, Dremio, Iceberg.
Cloud Environments	AWS, PCF, EC2, EBS, S3, Docker, ECS, EBS, EKS, SQS, RDS, S3, Glacier, Lambda, Kubernetes
IDE	Eclipse, IntelliJ, Spring Tool Suite (STS) 3.8.3, Postman, TOAD
Testing & Bug Tracking	JUNIT4/5, Jasmine, Protractor, JIRA 7.0, Bugzilla 4.4.12, Curl 7.36, Blaze meter

Tools	
Methodologies	Agile, waterfall, Scrum
Build Tools	Ant 1.10, Maven 3.3.9, Gradle 6.4.1, 7-zip file manager, LDAP, IAM.
Web Services	SOAP, REST, SOAP UI.

TECHNICAL EXPERIENCE:

Client	Walmart– Bentonville
Duration	May 2023 - Present
Role	Sr Full Stack developer

Description:

Walmart Inc. is a retail company, which engages in the operation of hypermarkets, discount department stores, and grocery stores. It operates through three segments: Walmart U.S., Walmart International, and Sam's Club. The Walmart U.S. segment includes retail operations in all 50 states and Puerto Rico, offering a diverse assortment of merchandise and services at everyday low prices. The Walmart International segment oversees retail, wholesale, and other businesses outside the United States, operating in numerous countries and markets worldwide. The Sam's Club segment is a membership-only warehouse club that provides a broad selection of merchandise and services to members, often at discounted prices.

Responsibilities:

- Involved in SDLC requirement gathering, analysis, design, development, testing, and deployment of applications using Agile (SCRUM) / SAFE methodology.
- Designed and developed Spring Boot microservices for EV-Charging and Omni>Returns platforms handling high-volume transaction processing.
- Built and maintained RESTful APIs using Spring MVC, Spring Data JPA, and Hibernate.
- Implemented Spring Security + JWT for authentication and role-based authorization.
- Designed scalable architectures using Spring Cloud (Eureka, Feign, Gateway) for service discovery and routing.
- Integrated Kafka producers/consumers for real-time event processing pipelines.
- Optimized SQL queries and schemas in PostgreSQL and MySQL for performance-critical workflows.
- Deployed microservices on AWS (EC2, RDS, S3) using Docker and Kubernetes.
- Participated in system design reviews, production incident handling, and Agile sprint planning.
- Designed and developed RESTful APIs using Node.js and Express.js for high-traffic enterprise applications.
- Built Node.js microservices for order processing, transaction handling, and system integrations.
- Implemented JWT-based authentication and role-based authorization in Node services.
- Integrated Node.js services with MongoDB, PostgreSQL, and MySQL databases.
- Developed reusable middleware for logging, validation, authentication, and error handling.
- Worked on Console applications, Windows applications, ASP.NET Web Forms, ASP.NET State Management, ASP.NET Caching, and secure ASP.NET Web Applications.
- Contributed to the development of API proxies, policies, and security frameworks in APIGEE.
- Developed code using Java 21 features like annotations, Generics, enhanced for loops, and Enums.
- Utilized Java 8 Stream APIs for efficient operations on collections and parallel processing.
- Addressed software application vulnerabilities by following secure coding practices and guidelines.
- Created microservice business components using Java, Spring Boot, Spring Security, Spring Batch, Spring Data JPA, and RESTful web services.
- Developed Hibernate DAO classes and integrated them with Spring-based manager classes for data persistence.
- Applied OWASP standards, FindBugs, Java Secure Coding Guidelines, and JASYPT for building secure web applications.
- Implemented fail-safe and circuit breaker patterns in Spring Boot microservices using Hystrix and configured Swagger UI for API documentation and service registration with Eureka.
- Applied Spring Boot Actuator for monitoring and managing production applications.
- Designed and developed feature toggles with the Spring framework to enable/disable specific features in production without code republishing.

- Configured routes, directives, pagination, validations, templating, dynamic loading, lazy loading, Shadow DOM, and ngRx store in Angular-based applications.
- Implemented AWS solutions (EC2, S3, RDS, EBS, Elastic Load Balancer, Auto Scaling groups) and set up monitors, alarms, and notifications using CloudWatch.
- Integrated a gateway solution for routing requests and registering services with Eureka to streamline service discovery.
- Optimized AWS costs by transferring Amazon RDS databases to EC2 instances when appropriate.
- Experienced with IAM, S3, Elastic Beanstalk, VPC, RDS, and CloudWatch on AWS for deploying and maintaining scalable, secure environments.
- Implemented centralized logging and search using Elasticsearch + Kibana (ELK stack) for real-time monitoring and troubleshooting of microservices.
- Developed and enhanced mission-critical Java applications supporting high-availability and high-throughput enterprise workloads.
- Worked extensively in Oracle Cloud Infrastructure (OCI) environments, deploying and supporting Java applications integrated with Oracle databases.
- Authored and maintained Linux shell scripts for application deployment, log analysis, automation tasks, and operational support.
- Performed deep production issue analysis across Linux, Java, Tomcat, and Oracle SQL layers to identify root causes and implement permanent fixes.
- Enhanced and modernized legacy applications as part of digital transformation initiatives using Spring Boot microservices and cloud-native patterns.
- Designed, documented, and communicated technical designs, architecture diagrams, and implementation plans to engineer, security, and platform teams.
- Built and optimized complex Oracle SQL queries, stored procedures, and performance-tuned database interactions for large-scale transactional systems.
- Deployed and supported applications on Apache Tomcat, including configuration, tuning, and troubleshooting of JVM and server performance issues.
- Implemented Kafka producers and consumers in microservices for real-time data pipelines.
- Performed testing for Node.js applications using Mocha and Chai, and for Spring Boot services with Mockito, JUnit, and MockMVC to achieve TDD.
- Applied service design principles including stateless services, idempotency, and error handling for BPM integrations.
- Data & SQL Server
- Collaborated with business stakeholders to translate business requirements into Appian process designs and technical architecture.
- Performed effort estimation and sizing for Appian workflows and integration components.
- Built Appian-based web applications integrated with Java Spring services for case management and reporting dashboards.
- Created PL/SQL Procedures, views, indexes, triggers, and functions, and wrote complex queries using PgAdmin for data management and extraction.
- Integrated Dynatrace with ServiceNow, Jira, and PagerDuty, and instrumented Dynatrace with web apps and Azure for performance monitoring and incident management.
- Used MongoDB GridFS for file storage and retrieval within Spring Boot microservices.
- Integrated CI/CD pipelines using Jenkins, Git, Fortify, and automated quality gates to support continuous delivery in Agile environments.
- Worked closely with Security, DevOps, Platform, and Production Support teams to ensure applications met enterprise CI/CD, security, and compliance standards.
- Developed front-end unit tests with Karma and Jasmine, and integration tests with Protractor.
- Created performance tests using JMeter and uploaded scripts to BlazeMeter for scalable load testing.
- Employed BDD techniques with Karma and Jasmine frameworks for Angular components.
- Migrated existing modules from IBM MQ to Apache Kafka and created Kafka adapters to decouple application dependencies.
- Used Express.js with Node.js to set up middleware, respond to HTTP requests, and applied modern front-end build tooling (Webpack, starter packs, boilerplates) for streamlined development.
- Handled production issues, daily maintenance, and incident resolution, continuously improving processes, monitoring strategies, and overall application stability.
- Hands on Experience in using various AWS (Amazon Web Services) IaaS (Infrastructure as a Service) Components like Amazon EC2, Amazon S3, Amazon simple DB, Amazon Elastic Load Balancing, Amazon SQS, Amazon EBS and Amazon cloud front, Elastic Cache, Dynamo DB, SQS, RDS.
- Implemented centralized logging and monitoring using ELK Stack, Splunk, and Dynatrace.

- Maintained issue progress in JIRA and participated in code reviews and pull request approvals to ensure code quality.

Client	Verizon – Silver Spring, MD
Duration	May 2021- April-2023
Role	Sr Full Stack Developer

Description:

Verizon Communications, Inc. is a holding company, which engages in the provision communications, information and entertainment products and services to consumers, businesses, and governmental agencies. It operates through Wireless and Wire line segments. The Wireless segment provides wireless voice and data services and equipment sales, which are provided to consumer, business, and government customers. The Wire line segment offers broadband video and data; corporate networking solutions; data center and cloud services; security and managed network services.

Responsibilities:

- Developed a Micro Service Oriented application with React JS in the front end and Spring Boot services.
- Involved in development, design and implementation front end part of the widget-based application using HTML5, CSS3-LESS, AJAX, Bootstrap 4.0.
- For client-side view rendering services, used React JS typically used various predefined Redux libraries.
- Developed scalable, type-safe frontend applications using TypeScript (ES6+), improving code readability, maintainability, and early defect detection.
- Designed and maintained strongly typed models, interfaces, and enums to align frontend contracts with backend REST APIs.
- Refactored legacy JavaScript codebases to TypeScript, reducing runtime errors and improving long-term stability.
- Implemented strict TypeScript configurations to enforce coding standards and improve overall code quality.
- Integrated TypeScript with RESTful APIs, handling asynchronous data flows using Promises and Observables.
- Collaborated with backend teams to ensure API schema consistency and type alignment across services.
- Used TypeScript effectively within component-based frameworks to improve reusability and scalability.
- Designed and developed Vue.js (Vue 2 / Vue 3) applications using component-based architecture for modular and reusable UI development.
- Built responsive, data-driven user interfaces using Vue Single File Components (SFCs) with TypeScript integration.
- Implemented state management using Vuex / Pinia to manage shared application state efficiently.
- Developed dynamic forms, dashboards, and real-time views integrated with backend Spring Boot and Node.js APIs.
- Used Vue Router for client-side routing, navigation guards, and role-based access control.
- Integrated REST APIs using Axios and handled error states, loading indicators, and retry logic.
- Applied Vue lifecycle hooks to optimize data loading, performance, and component behavior.
- Ensured cross-browser compatibility and responsive design using HTML5, CSS3, and Bootstrap/Tailwind.
- Wrote unit tests for Vue components using Jest and Vue Test Utils.
- Collaborated with UX, backend, and QA teams in Agile sprints to deliver high-quality frontend features.
- Configured React-Redux for state management and React-Router for programmatic navigation.
- Implemented Store-Redux for holding the whole state tree of application and Reducer-Redux for describing actions.
- Used Axios AJAX request to data from back-end based on user interface input and post updated data back to backend.
- Mocha test runner and Chai test framework are used to test React JS components.
- Designed and implemented event-driven microservices using Kafka, RabbitMQ, and AWS SNS/SQS for asynchronous communication.
- Designed and developed RESTful APIs using Spring Boot and JAX-RS.
- Used Java 17's Flight Recorder and JFR Event Streaming for better performance monitoring and diagnostics
- Web pack module bundler and Babel java script compiler are used accompanying React JS.
- Implemented Spring Boot to create a CRUD backend for our React-fronted application.
- Designed high-throughput Kafka topics with optimal partitioning and replication strategies.
- Worked with GitHub Package Registry for storing and distributing dependencies.
- Bottle micro-framework implemented with RESTful service and used WADL (Web Application Description Language) for modelling the resources provided by the services and relationships between them.
- Junit is implemented along with Mockito to perform unit testing on our RESTful web application.

- Implemented JWT (JSON Web Tokens) for creating tokens to assert claims in the application and thus providing authentication of RESTful services.
- Developed and enhanced mission-critical Java applications supporting high-availability and high-throughput enterprise workloads.
- Worked extensively in Oracle Cloud Infrastructure (OCI) environments, deploying and supporting Java applications integrated with Oracle databases.
- Authored and maintained Linux shell scripts for application deployment, log analysis, automation tasks, and operational support.
- Performed deep production issue analysis across Linux, Java, Tomcat, and Oracle SQL layers to identify root causes and implement permanent fixes.
- Enhanced and modernized legacy applications as part of digital transformation initiatives using Spring Boot microservices and cloud-native patterns.
- Designed, documented, and communicated technical designs, architecture diagrams, and implementation plans to engineer, security, and platform teams.
- Built and optimized complex Oracle SQL queries, stored procedures, and performance-tuned database interactions for large-scale transactional systems.
- Deployed and supported applications on Apache Tomcat, including configuration, tuning, and troubleshooting of JVM and server performance issues.
- Worked with frontend teams to pass JWTs securely in HTTP headers for API calls from React-based clients.
- Utilized GCP to host and manage React applications with integrated authentication, storage, and GraphQL APIs.
- Followed GitOps practices by managing infrastructure code in Git, with branching strategies and code reviews for Terraform changes.
- Used Terraform Workspaces to manage infrastructure across multiple environments (dev, QA, staging, production) with environment-specific variables.
- Implemented Spring Batch for processing large volumes of records, including logging/tracing, transaction management, job processing statistics, job restart, skip, and resource management in the application using Quartz scheduler.
- Implemented service discovery and load balancing within Kubernetes clusters to ensure optimal routing and performance of services across different environments.
- Developed and deployed microservices in Kubernetes (K8s) and Docker for containerized application management.
- Published message services using Spring AMQP's Rabbit Template and subscribes to the messages on a POJO using Message Listener Adapter.
- Implemented Multithreading and Concurrency mechanisms using Java's Executors and Fork/Join framework.
- Created modular and reusable Terraform scripts for standardized infrastructure provisioning across dev, QA, and production environments.
- Worked with Cassandra Node Connector for database persistence to interact with Cassandra NOSQL DB with Spring Data to unify and ease the access to Cassandra persistence stores.
- Configured Kafka Brokers, Zookeeper clusters, and monitored performance.
- Developed single-file Java programs using Java 17's java launcher, enabling direct execution of .java files without compilation.
- Used Spring Cloud Gateway for API Gateway and rate limiting.
- Set up GitHub Secrets Management for handling sensitive information securely.
- MySQL database used to load the application data and written PL/SQL procedures, complex queries to perform various data operations.
- Splunk is implemented in the application for log errors, exceptions, business logic and log analytics.
- Gradle build tool is used to deploy the application on the web servers i.e., JBoss.
- Integration of automation batch run job with Jenkins. Worked with Jenkins Continuous Integration and Continuous Deployment (CI/CD).
- Integrated OAuth2, JWT, and OpenID Connect (OIDC) for secure authentication in microservices-based applications.
- Used GitHub Projects and Issues for Agile development tracking.
- Implemented Kafka Connect to integrate with external data sources like databases and cloud storage.
- Optimized performance by using Thread Local variables for managing thread-specific data.
- Implemented Spring Cloud-Netflix OSS Stack along with using Ribbon for client-side load balancing, Netflix Zuul Api Gateway with Eureka service registry for reverse proxy infrastructure and Hystrix Circuit Breaker for fault tolerance.
- Deployed the Dockized Spring Boot application that is intended to be run on dev local machine using PCF (Pivotal Cloud Foundry).
- Participated in pull request reviews and weekly code reviews to maintain code quality.
- Created and maintained CI/CD pipeline scripts using Jenkins.
- Used RxJS to manage complex asynchronous data streams in frontend applications.

Client	Deutsche bank, New York city
Duration	Jan 2020 - April 2021
Role	Sr Full Stack Developer

Description:

Deutsche Bank is a global financial institution providing commercial, investment, private banking, and asset management services, heavily investing in technology to transform its operations and client offerings.

Responsibilities:

- Extensively leveraged Java 8 capabilities such as lambda expressions for communication between the business layer and the database.
- Used Java 8 stream API for bulk data operations on collections using both streams and parallel streams.
- Using Java 8.0 developed APIs as per the business cases and analyses the current API with Spring Boot.
- Involved in the development, design, and implementation front end part of the widget-based application using HTML5, CSS3-LESS, AJAX, and Bootstrap 4.0.
- Implemented .Net framework 4.0 and Object-Oriented Methodologies for application development
- Developed a POC to create ASP.NET MVC 4 application which in turn uses ASP.NET Web API application in Visual Studio 2012.
- Enhanced legacy applications by building new components in Angular 9.0/8.0 and Typescript.
- Refactored legacy JavaScript codebases to TypeScript, reducing runtime errors and improving long-term stability.
- Implemented strict TypeScript configurations to enforce coding standards and improve overall code quality.
- Integrated TypeScript with RESTful APIs, handling asynchronous data flows using Promises and Observables.
- Collaborated with backend teams to ensure API schema consistency and type alignment across services.
- Used TypeScript effectively within component-based frameworks to improve reusability and scalability.
- Designed and developed Vue.js (Vue 2 / Vue 3) applications using component-based architecture for modular and reusable UI development.
- Built responsive, data-driven user interfaces using Vue Single File Components (SFCs) with TypeScript integration.
- Implemented state management using Vuex / Pinia to manage shared application state efficiently.
- Created new components, services, pipelines, and directives using Angular CLI extensively.
- Created code for new server-less monitoring platform built with NodeJS and Material utilizing Amazon services.
- Used WADL (Web Application Description Language) for modeling the resources provided by the services.
- Design and develop microservice business components using java, Spring Boot, Spring Security, Spring Batch, and Spring Data JPA and implement REST web services based on RESTful APIs.
- Used OAuth 2.0 in conjunction with the Spring security framework to securely expose our APIs by requiring the access token when a client requests access to our resources.
- Built Spring Boot + Camel based integrations connecting internal systems, third-party services, and message brokers.
- Experience in OWASP (Open Web Application Security Project) as community-driven, open-source approach to security, with the goal of making security more accessible to developers, organizations.
- Implement MDM, data quality, and metadata management frameworks using Informatica CDGC and DQ for trusted enterprise data
- Experience in software application vulnerability refers to the knowledge, skills, and expertise required to identify, assess, and remediate vulnerabilities in software applications. This experience can be gained through education, training, and hands-on experience working with software applications and security tools.
- Experience in SAST tools like Fortify SCA, CheckMarx, AppScan, and SonarCube are essential in identifying and fixing security vulnerabilities in software applications.
- Collaborated with stakeholders to define and implement GraphQL schema, ensuring optimal data structures and relationships that support application requirements.
- Debugged and resolved issues in Appian interfaces, process models, and integration services.
- Provided production support for BPM workflows and transaction failures.
- Designed and mapped business data models and loaded data into SQL Server for reporting and process analytics.
- Developed optimized SQL queries, stored procedures, and ETL validation logic for Appian-connected datasets.
- Developed and implemented Appian BPM workflows using SAIL interfaces, process models, records, and rules to automate healthcare operations and approval workflows.

- Developed and implemented Appian BPM workflows using SAIL interfaces, process models, records, and rules to automate healthcare operations and approval workflows.
- Built Appian-based web applications integrated with Java Spring services for case management and reporting dashboards.
- Built Appian-based web applications integrated with Java Spring services for case management and reporting dashboards.
- Modules for the Front-end are integrated to Back end using Hibernate framework.
- Implemented Spring Batch for processing large volumes of records, including logging/tracing, transaction management, job processing statistics, skip, resource management in the application using Quartz scheduler.
- AWS S3 is used to store and retrieve the images and documents that are used in our application.
- Deployed Spring Boot-based microservices into Docker container using Amazon EC2 container services.
- Used AWS Cloud watch in alerting, maintaining, and monitoring production and corporate servers/storage.
- Created an application in accordance with the WCAG 2.0 and 2.1 requirements to ensure accessibility.
- Expertise in Microsoft Azure Cloud Services (PaaS & IaaS), Application Insights, Document DB, Internet of Things (IoT), Azure Monitoring, Key Vault, Visual Studio Online (VSO) and SQL Azure. MySQL database used to load the application data and writing PL/SQL procedures, and complex queries to perform various data operations.
- Worked with Cassandra Node Connector for database persistence to interact with Cassandra NoSQL DB with Spring Data to unify and ease the access to Cassandra persistence stores.
- Used GridFS in MongoDB for uploading and retrieving files in our Spring Boot microservice application.
- Worked on MongoDB database concepts such as locking, transactions, indexes, and schema design.
- Experience in working with NoSQL Database like MongoDB to manage extremely large data sets.
- Implemented Spring Cloud-Netflix OSS Stack along with using Ribbon for client-side load balancing, Netflix Zuul API Gateway with Eureka service registry for reverse proxy infrastructure, and Hystrix Circuit Monitor server logs to support production activities with the help of Kubernetes logs and Splunk cloud logging. Also experienced in monitoring logs in Apigee developer portal.
- Experienced in writing the Kubernetes cron jobs for running the failed records on regular schedules.
- Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers.
- Ability to write the unit test for frontend by using Karma and Jasmine framework and writing the integration test cases by using the Protractor test cases.
- Wrote unit test cases for server-side applications by using the JUnit5 and Mockito frameworks.
- Experienced in creating pipeline scripts for CI/CD deployment using the Concourse tool.
- Experienced working with performance testing tools such as JMeter, and Blaze meter.
- Extensively worked on writing JMeter scripts for analyzing the performance of our application.
- Splunk is implemented in the application for log errors, exceptions, business logic, and log analytics.
- Maintain the progress of issues worked on /in-progress status in JIRA.
- Gradle build tool is used to deploy the application on the web servers i.e., JBoss.
- Deployed the Dockized Spring Boot application that is intended to be run on a dev local machine using PCF (Pivotal Cloud Foundry).
- Behavioral and Integration testing is done using Cucumber and Selenium respectively.

Client	Valence Health, Chicago, IL
Duration	March 2018- Dec 2019
Role	Sr Java/J2EE Developer

Description:

This application is used to collect the data from the host of hospitals and generate reports and used to collect information about doctors, patient's cares. The old Customer Service Website is being replaced with a modern, attractive, SOA-oriented site. It has various parts of the functionality to communicate with the backend system through web services.

Responsibilities:

- Involved in Requirements gathering, Analysis, Design, Development, and Testing of applications using an AGILE methodology (SCRUM) in a test-driven development (TDD) approach.
- Designed the user interface screen and its functionality as per user requirements and developed RESTful Web services in Mule ESB based on Service Oriented Architecture (SOA).
- Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods, and Concurrency API.

- Worked on .NET Security features such as Authentication Authorization, Forms-based Authentication, Authorizing Users, Roles and User Account Impersonation, tracing.
- Worked on several ASP.NET server controls like Calendar, GridView control, Repeater Control, ObjectDataSource Control and handled server-side events to optimize performance.
- Responsible for creating efficient design and developing User Interaction end-to-end screens using HTML5, CSS3, Bootstrap, JavaScript, React JS, and Node JS.
- Refactored legacy JavaScript codebases to TypeScript, reducing runtime errors and improving long-term stability.
- Implemented strict TypeScript configurations to enforce coding standards and improve overall code quality.
- Integrated TypeScript with RESTful APIs, handling asynchronous data flows using Promises and Observables.
- Collaborated with backend teams to ensure API schema consistency and type alignment across services.
- Used TypeScript effectively within component-based frameworks to improve reusability and scalability.
- Designed and developed Vue.js (Vue 2 / Vue 3) applications using component-based architecture for modular and reusable UI development.
- Implemented MVC architecture with React components as Views, models, and controllers in node.js for API.
- Developed Web Services using XML messages that use SOAP. Developed Web Services for Payment Transactions and Payment Release, Created WSDL and the SOAP envelope.
- Worked on implementing backup methodologies by Power Shell Scripts for Azure Services like Azure SQL Database, Key Vault, Storage blobs, App Services, etc.
- Worked on the Implementation of the system as an independent component to be supported/integrated with Appian-based BPM applications to deliver management capabilities using Appian 7.5 SAIL features.
- Built Appian-based web applications integrated with Java Spring services for case management and reporting dashboards.
- Designed and implemented Appian process models, decision rules, and user task flows.
- Used J2EE design patterns like Model View Controller (MVC), Singleton, Factory, Data Access Object (DAO), Data Transfer Object (DTO), and Service Locator, etc.,
- Used spring framework including spring core/IOC, Spring AOP, Spring ORM, Spring Batch, and Spring Auto wiring, and implemented authentication, authorization, and access-control features by using Spring Security.
- Created JSON-based Azure Resource Manager (ARM) templates and used them for deployments; Migrated on-premises servers, hard drives, and Web applications to Azure leveraging, Azure CLI 2.0, Azure App Service Migration Assistant Tool, and Azure resource Explore.
- Created spring services, controllers, and DAOs to achieve dependency injection and to wire objects of classes.
- Implemented the RESTful web service for utilizing these services and exposing some of the newly implemented functionalities for others through JAX-RS and Spring Rest Controller.
- Designed layouts on the front end and developed web pages responsive for smartphones, tablets, and Personal desktops using HTML5, CSS3, Bootstrap, jQuery, React HOC, Redux & React Promises.
- Service Oriented Architecture (SOA) was exposed through RESTful web services with loose coupling between layers using spring framework during development.
- Experience developing and integrating Appian BPM applications using Java-based REST/SOAP services and SQL Server for enterprise workflow automation.
- Used advanced java 8 features like Lambda expressions for array operations, Streams, Method references, and collections. Enhanced concurrency methods etc. throughout the application for well-defined programming.
- Involved in writing Thread Safe blocks for Multithreading access to make valid transactions.
- Configured Identity and Access Management (IAM) groups and users in AWS for improved login authentication.
- Experience with employment Spring Kafka and Zookeeper as messaging services.
- Created Hibernate as the data abstraction to connect with the Oracle database, using Spring Integration.
- Extensive experience with HQL, Named Parameters, Named Queries, and Interfaces such as Expression, Query, and Criterion for Hibernate template implementation, as well as Hibernate Cache.
- Experience with Hibernate mappings, EH cache, Lazy loading transactions, and locking.
- Used Oracle 11g/12c for the backend data and performed complex queries using joins for CRUD operations.
- I created and managed data on schemas using PL/SQL procedures, views, indexes, and functions with TOAD.
- Designed and mapped business data models and loaded data into SQL Server – 2019 for reporting and process analytics.
- Developed CI/CD pipeline and build tasks to run the unit tests on Jenkins and maintained separate build in Maven for the module for easy integration to the portal build and configuration with Jenkins.
- Used Maven as a build and dependency management tool for creating EAR, WAR, and JAR file.
- Used IntelliJ Idea for developing and debugging Spring Boot applications.
- Configured and deployed application into Web Logic application Server.
- Generated Model layer of MVC using EJB, worked with Spring Cloud and Netflix OSS-Eureka for service registration and discovery.

Client	Principal Financial Group, Des Moines, IA
Duration	Jan 2017 - Feb 2018
Role	Full Stack Developer

Description:

The Principal Financial Group (Principal) offers businesses individuals and institutional clients a wide range of financial products and services including retirement, asset management, and insurance, through its diverse family of financial services companies.

Responsibilities:

- Implement Agile approaches and participated actively in technical meetings, requirement collecting, analysis, planning, effort estimating, coding, development, and testing.
- Developed User Interface application modules using HTML, CSS, JavaScript, JSON, jQuery, and AJAX.
- Developed client-side code in React.JS and utilized NPM and gulp folders to produce server environments.
- Used flux with the redux framework to manage targeted URLs and monitor the application.
- Used React.JS to implement rich functions in various pages, form validation, CRUD, grid list, search, sort, pagination, multi-selection, tags-input, advanced/custom directives, authentication, unit tests, etc.
- Expertise in different open-source frameworks like Struts 2.0/2.1, Spring 2.5/3.0, and ORM Technology like Hibernate 3.0, IBatis, Mybatis, and jQuery.
- Legacy Web Services Systems using SOAP (AXIS-2) is migrated and implemented using REST (Jersey extending the JAX-RS) with data representation in different formats such as XML and JSON.
- Extensively used various modules in Spring like AOP, DI (IOC), Bean Wiring, Spring Inheritance, Auto Wiring, Spring JDBC Templates, and Spring Quartz Schedulers for Jobs.
- Designed and developed Microservices using REST framework and Spring Boot.
- Used Amazon AWS (EC2/S3/EBS) for prototyping and subsequent evaluation.
- Build Restful API by building Node JS Server in back end to handle requests from front-end jQuery Ajax calls.
- Worked on using Grunt used for concatenation, minification, and running of unit test cases.
- Experience in Creating, Dropping Indexes, Tables, Stored Procs, and Views on Oracle DB.
- Develop a business continuity plan for the SQL Server Databases using JDBC drivers.
- Used micro-framework to implement REST API and Mongo DB (NO SQL) as the back-end database.
- Created JSON Data and stored as documents comprising documents, data types, and conversions in MongoDB.
- Writing Unit test cases using the JUnit testing framework and performing unit and system testing.
- Expertise in SoapUI, Selenium Data Driven framework and integrating it with Maven [Build Management Tool], TestNG [Unit Testing tool], and Jenkins [Continuous Integration Tool].
- Developed back-end interfaces using PL/SQL packages, stored procedures, functions, procedures, anonymous PL/SQL programs, Cursor management, and Exception Handling in PL/SQL programs.
- Worked with JAXB parser for marshaling and Unmarshalling XML data.
- Developed XPATH, XQUERY, and custom XML parsers based on SAX, and DOM as part of XML Consumption.

Client	Ascent Consulting Services, India
Duration	June 2014 - Dec 2016
Role	Jr. Software Engineer
