SUMMARY

Software Engineer & Java professional with 5+ years of experience building **scalable APIs, microservices, and transaction-driven platforms** across finance and healthcare. Known for **Java, Spring Boot, SQL, and React** with cloud deployment on **AWS & Azure**. Delivered systems that cut data processing time by 40% and supported applications handling millions of daily records. Strong track record of working in cross-functional teams, optimizing backend workflows, and improving business outcomes through clean, maintainable code.

EXPERIENCE

BLACKROCK | Java Backend Developer Feb 2025 - Current

- Engineered distributed **Java (Spring Boot, Spring Cloud)** microservices to reconcile trade, position, and pricing data across custodians, ensuring consistency for \$50B+ in AUM portfolios and reducing reconciliation time.
- Designed **Kafka-based streaming workflows** to publish portfolio and market updates in real time to downstream risk and compliance engines handling 10M+ daily transactions.
- Exposed validated portfolio data through **GraphQL and REST APIs**, enabling seamless integration with analytics dashboards and Python-based risk models used by fund managers.
- Built centralized observability using the **ELK Stack (Elasticsearch, Logstash, Kibana)** for log aggregation, anomaly tracking, and performance metrics across 15+ microservices.
- Automated deployments with **Docker + GitHub Actions CI/CD**, adding smoke tests, blue-green rollouts, and rollback triggers that reduced production downtime from 30 minutes to under 5.

GOLDMAN SACHS | SOFTWARE ENGINEER - JAVA Feb 2024 - Jan 2025

- Developed **Java (Spring Boot)** microservices for pre-trade validation and order routing, applying business rules to block inconsistent or duplicate trades; cut manual intervention by 40%.
- Implemented **multi-threaded batch processors** to parse and enrich market feeds from Bloomberg and Reuters, boosting data ingestion throughput from 200K to 1.2M records per hour.
- Integrated **Redis caching** and **JPA query tuning** to optimize portfolio risk lookups, reducing API response times from 3.4s to under 900ms during trading hours.
- Built **audit and alerting modules** with **Kafka + Prometheus + Grafana**, notifying teams of stale positions or pricing anomalies within seconds of detection.
- Containerized services using **Docker** and managed environments through **AWS ECS** with **Terraform**, ensuring consistent releases and 99.9% uptime across staging and production.

VIVMA SOFTWARE INC. | JAVA DEVELOPER Jan 2019 - Apr 2022

- Designed a **low-latency pricing engine** in **Java (Spring Boot, Vert.x)** using async event loops and lock-free queues to calculate surge multipliers in under 150 ms for 20 M+ daily ride requests.
- Implemented **geospatial matching algorithms** with **R-trees and Dijkstra-based routing**, improving driver-passenger pairing efficiency by 30%.
- Introduced **in-memory caching** with **Caffeine + Redis Cluster**, cutting redundant DB reads by 70% and stabilizing p99 latency under 400 ms.
- Deployed autoscaling microservices on **Kubernetes (EKS)** with adaptive resource throttling and circuit breakers via **Resilience4j**, ensuring reliability during 10× traffic spikes.

TECHNICAL SKILLS

Backend & Frameworks: Java, Spring Boot, Spring MVC, Hibernate, JPA, REST API, Microservices, Spring Security, Spring AOP, Spring Cloud, Spring Data, Python, C#, .NET, .Net Framework 4.8

Frontend & Frameworks: React, Angular, TypeScript, JavaScript, Redux, Bootstrap, Kendo-UI, HTML5, CSS3

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, API Gateway), Docker, Kubernetes, CI/CD (Jenkins, Maven, Gradle), Git/GitHub, GraphQL

Databases & ETL: SQL, PostgreSQL, Oracle, MySQL, Data Modeling, Query Optimization, ETL Pipelines

Software Development Practices: Agile (Scrum, Jira, Confluence), SDLC, JUnit, Mockito, Postman

Certification: AWS Certified Developer, Oracle Certified Professional (OCP)

EDUCATION

University of Memphis
Master of Science in Information Systems

Memphis, TN
Dec 2023
