

Rithik Roshan

Full Stack Developer

USA | +1 (314) 575-0190 | Email: rithik@mymailsbox.net | [LinkedIn](#)

SUMMARY

Full Stack Developer with 4+ years of hands-on experience building scalable web applications and APIs using Python and Java technologies. Proven track record in designing cloud-native solutions, microservices architecture, and enterprise systems across SaaS and technology sectors. Skilled in backend development with Django, Flask, FastAPI, Spring Boot, and frontend frameworks like React and Angular. Strong background in AWS/Azure cloud platforms, CI/CD automation, database optimization, and security best practices. Known for delivering reliable, maintainable code and collaborating effectively with cross-functional teams in Agile environments.

PROFESSIONAL EXPERIENCE

Full Stack Developer | CONTUS Tech | USA

Jan 2025 - Current

- Develop full-stack web applications using Python (Django/Flask/FastAPI) and Java (Spring Boot) with React and Angular frontends, improving application performance by 30% through optimized code structure and caching strategies.
- Build and maintain RESTful APIs in both Python and Java Spring Boot, handling high-volume requests for B2B and B2C platforms while reducing response times by 25%.
- Design microservices using Spring Boot and Python FastAPI, deployed on AWS (EC2, Lambda, RDS), achieving 99.9% uptime and cutting infrastructure costs by 20%.
- Implement OAuth2, JWT, and Spring Security for authentication across healthcare and finance applications, ensuring HIPAA and GDPR compliance.
- Create automated data pipelines using Airflow and Apache Spark to process CRM and ERP data into PostgreSQL and Snowflake, reducing manual reporting time by 40%.
- Set up CI/CD workflows with Jenkins, GitHub Actions, Docker, and Kubernetes for both Python and Java services, enabling automated testing and zero-downtime deployments.
- Use Hibernate/JPA and SQLAlchemy ORMs to optimize database queries, improving data retrieval speeds by 35% for reporting modules.
- Write comprehensive unit and integration tests using JUnit, Mockito, PyTest, and Selenium, maintaining 90% code coverage and reducing production bugs by 25%.
- Build monitoring dashboards with Grafana and Prometheus to track application health, reducing incident response time by 35%.
- Mentor 3 junior developers on Python and Java best practices, code reviews, and Git workflows, improving team productivity and code quality.

Full Stack Python Developer | GeekyAnts | India

July 2020 - Dec 2023

- Developed and deployed enterprise web applications using Python (Flask/FastAPI) for backend and React/Angular for frontend, improving UX, boosting client adoption by 22%, and reducing downtime in SaaS platforms.
- Built scalable backend systems using Flask, FastAPI, PostgreSQL, and MongoDB, processing 100K+ daily requests with high availability. Optimized APIs and database calls to increase query execution speed by 28% for analytics-heavy use cases.
- Implemented asynchronous job pipelines with Celery, Redis, and Kafka to handle background tasks like notifications, ETL jobs, and batch processing, reducing peak-hour server load and boosting throughput by 30%.
- Designed and deployed real-time communication features (chat, alerts, push notifications) using WebSockets, Socket.IO, and Django Channels, increasing user engagement and collaboration in SaaS applications by 35%.
- Collaborated with ML engineers to deploy AI/ML models into production pipelines via Flask APIs and AWS SageMaker, adding real-time personalization, recommendation engines, and predictive analytics to client products.
- Created CI/CD pipelines with GitLab CI/CD, Jenkins, and Kubernetes, automating end-to-end deployments. Cut release cycles from weeks to days, improved reliability of production rollouts, and enhanced team collaboration across dev and ops teams.
- Monitored application performance and infrastructure health with Prometheus, ELK Stack, and Grafana, setting up predictive alerts that reduced downtime by 25% and improved overall system resilience.
- Conducted database indexing, query optimization, and schema redesigns in PostgreSQL and MySQL, which reduced response times by 35% and improved performance for large-scale reporting modules.
- Enforced secure coding practices aligned with OWASP, implemented SSL/TLS encryption, IAM-based access control, and vulnerability scanning. This safeguarded client healthcare and financial data, reducing compliance-related risks significantly.
- Delivered comprehensive technical documentation, client training workshops, and knowledge transfer sessions, which streamlined project handovers, reduced post-deployment support tickets by 20%, and enhanced client self-sufficiency.

TECHNICAL SKILLS

- Programming Languages:** Python, Java (8/11/17), JavaScript, TypeScript, SQL, Bash
- Backend Frameworks:** Django, Flask, FastAPI, Spring Boot, Spring MVC, Spring Data JPA, Node.js, Express.js
- Frontend Technologies:** React.js, Angular, Next.js, Redux, Tailwind CSS, Material UI, Thymeleaf
- API Development:** RESTful APIs, GraphQL, Spring REST, OAuth2, JWT, SAML, Swagger/OpenAPI, WebSockets
- Databases:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Snowflake, Hibernate/JPA, SQLAlchemy, Django ORM
- Cloud Platforms:** AWS (Lambda, EC2, S3, RDS, EKS, API Gateway), Azure Functions, GCP
- DevOps & CI/CD:** Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Terraform, Ansible, Nginx
- Data Processing:** Apache Airflow, Apache Spark, Kafka, Pandas, NumPy, ETL/ELT Pipelines
- Monitoring & Logging:** Prometheus, Grafana, ELK Stack, Splunk, CloudWatch, New Relic
- Security:** OWASP Top 10, Spring Security, SSL/TLS, RBAC, IAM, Vulnerability Scanning
- Testing:** JUnit, Mockito, PyTest, Selenium, Postman, Cucumber, TestNG, TDD/BDD
- Build Tools:** Maven, Gradle, pip, npm
- Methodologies:** Agile/Scrum, Microservices Architecture, CI/CD, Git, Jira, Confluence

EDUCATION

Masters | Webster University, St. Louis, USA

Jan 2024 - May 2025

Bachelors | Gurunanak Institutions Technical Campus, Hyderabad, India

July 2018 - Aug 2022
