

SUMMARY

Architected and delivered scalable backend solutions as a Software Engineer with 6+ years of hands-on experience in designing microservices, building secure RESTful APIs, and deploying containerized applications on cloud platforms. Leveraged expertise in Java, Spring Boot, AWS, Kafka, and relational as well as NoSQL databases to build enterprise-grade systems across fintech, HR, and legal domains. Demonstrated strong collaboration in Agile teams, contributing to CI/CD automation, rigorous testing practices, and system optimization for performance and reliability. Committed to clean code, modular architecture, and cross-functional teamwork to drive continuous product improvement.

SKILLS

Programming Languages: Java (8–17), JavaScript, Node.js, Python, SQL, HTML5, CSS

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Framework, Hibernate, React.js, Apache PDFBox, Spring Data JPA.

API, Integration & Architecture: RESTful API Design, SOAP Services, API Gateway, OAuth2, JWT Authentication, Event-Driven Microservices, Service Orchestration, MVC Architecture, Modularized Architecture, Concurrency Optimization

Cloud, DevOps & CI/CD: Azure DevOps, AWS (EC2, S3, Lambda, IAM, EKS), Docker, Kubernetes, Jenkins, Git, GitHub, Bitbucket, Maven, Containerized Deployments, Automated Build Pipelines, Environment Parameterization, GitLab CI/CD.

Messaging & Asynchronous Processing: RabbitMQ, Redis, Message Queues, Multithreading, High-Volume Workflow Automation

Databases & Storage: MySQL, PostgreSQL, MongoDB, Database Schema Design, Stored Procedures, Indexing Strategies

Monitoring & Performance: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Real-Time Alerting, Observability, Performance Tuning, Root-Cause Analysis

Testing & Quality Engineering: JUnit, Mockito, Selenium, Postman, SonarQube, Automated Unit Testing, Integration Testing, Regression Testing, API Validation & Quality Gates

SDLC, Delivery & Tools: Agile/Scrum methodologies, sprint planning, release coordination, impact analysis, code reviews, production support, SLA compliance, refactoring, design patterns, technical debt reduction, JIRA, Confluence, CI/CD, Git version control, and microservices architecture.

EXPERIENCE

Software Engineer CGI Incorp, USA	Feb 2025 - Present
- Developed new feature sets and service orchestration layers using Java, Spring Boot, and event-driven microservices, enabling faster case routing and improved workflow automation across state departments. - Implemented secure data-exchange pipelines using OAuth2, JWT, and API Gateway, enhancing authentication and access control for high-sensitivity case data. - Modernized legacy components by adopting containerized deployments (Docker, Kubernetes) and optimized cloud-native configurations across Azure DevOps environments. - Built system monitoring dashboards using Prometheus, Grafana, and ELK logging, improving observability, real-time alerting, and root-cause analysis efficiency. - Partnered with architects to refine system design patterns, optimizing concurrency, message queues, and service reliability for high-volume workloads.	
Software Engineer Bytes Soft Solution, India	Oct 2021 - Jul 2023
- Engineered end-to-end workflow automation features using Java, Spring MVC, Hibernate ORM, and SOAP/REST services, enabling seamless servicing of policyholders across multiple touchpoints. - Designed optimized database schemas, stored procedures, and indexing strategies in MySQL, reducing query time and enhancing policy data retrieval performance. - Built robust asynchronous processing modules using RabbitMQ, Redis, and multithreading concepts to support high-volume customer service transactions. - Coordinated with QA and product teams to define test scenarios, API validations, and sprint-level release criteria, ensuring smooth iterative delivery in an Agile setup. - Strengthened deployment reliability by implementing SonarQube code-quality gates, automated build validations, and environment-specific parameterization through Jenkins pipelines. - Conducted impact analysis, code reviews, and production support triaging, ensuring SLA compliance and proactive issue prevention through continuous monitoring tools. - Led the refactoring of outdated application layers to modularized components, improving maintainability, extensibility, and overall technical debt reduction.	
Software Developer Aplus Datalytics, India	Jan 2018 - Sep 2021
- Developed core application modules for the Unified Learning & Document Automation Platform using Java, Spring Framework, and RESTful APIs, supporting automated creation and distribution of education and financial-print documents. - Built dynamic workflow and template management features using JavaScript, React.js, and HTML/CSS, enabling editors and content creators to generate compliant learning material and print-ready documents. - Engineered backend services for document processing, PDF generation, and metadata tagging using Node.js, Apache PDFBox, and integrated OCR tools to streamline content digitization. - Designed optimized database schemas and data pipelines in PostgreSQL and MongoDB, improving structured and unstructured content retrieval for high-throughput publishing operations. - Implemented automated test suites using JUnit, Selenium, and Postman, enhancing platform stability and ensuring defect-free releases across education and financial-print workflows. - Supported CI/CD deployment pipelines via Git, Jenkins, Maven, and Docker, enabling frequent releases and environment consistency across dev, QA, and production stages.	

EDUCATION

Master of Science in Computer Science California State University San Bernardino, USA	May 2025
Bachelor of Technology in Information Technology Sreenidhi Institute of Science and Technology, India	May 2019

PROJECT

Connect Four Game	Mar 2024 - May 2024
- Developed a desktop-based Connect Four game using Java Swing, applying event-driven programming and intuitive user interface design. - Implemented core game logic using object-oriented principles including grid validation, win condition checks, and alternating turn mechanics; packaged the project as a cross-platform	
Cabs Management System	Oct 2017 - Dec 2017
- Created a dynamic web-based portal for online cab booking with real-time availability and scheduling features. - Built the front-end using HTML, CSS, and JavaScript, and developed server-side logic in PHP with MySQL integration for managing user data and bookings.
