

Roshan Patel

Full Stack Developer | Email: romi551797@gmail.com | Ph #: 224-236-2283

PROFESSIONAL SUMMARY:

- ❖ **6+ years** of experience as a **full-stack Java developer**, specialize in analyzing, designing, developing, and implementing enterprise applications using **Java/J2EE technologies**.
- ❖ Experience with **Spring Framework** modules such as **Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Dashboard, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Spring Ribbon, and Spring Netflix**.
- ❖ Good experience in client scripting languages like **HTML5 and CSS3**, **JavaScript** with **ECMA6** features, **TypeScript, jQuery, AJAX, JSON, Bootstrap, Angular 2/4/7/8/9/10/11/12/13/14/15** and **Node JS**.
- ❖ Expertise in building scalable, maintainable, and performant web applications using **React.js** and modern **React Hooks** for state and lifecycle management.
- ❖ Strong understanding of **React component architecture**, including hooks-based state management, side effects handling, and component optimization techniques.
- ❖ Excellent understanding of **Angular routing concepts, components, filters, MVC architecture, expressions, directives**.
- ❖ Expertise in **Angular Directives** and **jQuery** functions, as well as **object-oriented JavaScript code**.
- ❖ Deep understanding of the Angular frameworks and libraries but with experience using them such as **NgRX, RxJs, ngbootstrap, ngx-bootstrap, ui-bootstrap, ui-router, and Angular Material**.
- ❖ Extensive experience using **jQuery UI, Bootstrap Mobile** for **web page cross-browser compatibility and responsiveness**.
- ❖ In-depth knowledge of Java **collections, multithreading, serialization, Java Beans**, and **network** programming concepts.
- ❖ Great experience in developing dynamic server-side web contents using **SOAP Web Services (JAX-WS) and Restful Services (JAX-RS)**.
- ❖ Proficient in building modern APIs using **GraphQL**, including schema design, resolver implementation, and integration with Java backend services.
- ❖ Proficient in **Java 11**, including **object-oriented design, multithreading, and error handling**.
- ❖ Excellent working knowledge of **JPA and Hibernate** as implementations.
- ❖ Good ability to work with **REST APIs** that communicate **JSON** data, as well as experience writing REST APIs.
- ❖ Expert in **HTML and JSON web application** development and the integration of **highly transactional and scalable applications**.
- ❖ Strong familiarity with (JMS) MQs such as **Apache Kafka, Rabbit MQ, IBM MQ, and Active MQ** to name a few.
- ❖ Experience with **Hibernate**, Java's popular **Object-Relational Mapping framework**.
- ❖ Expertise with **NOSQL** databases like **MongoDB**. Developed queries for **MongoDB backend**.
- ❖ Thorough understanding of the **WCAG 2.1** Guidelines is essential in order to ensure the web content is easily accessible to people with disabilities.
- ❖ Experience in integrating React applications with RESTful APIs and **GraphQL** for efficient data fetching and state synchronization.
- ❖ Profound knowledge of **Java/J2EE** development using IDE tools such as **Eclipse, STS, and NetBeans**.
- ❖ Strong knowledge of multiple server environments such as **IBM Web Sphere, IBM Web Sphere ESB (Enterprise Service Bus), WebLogic Server, Apache Tomcat, and JBoss**.
- ❖ Good understanding of programming tools like **Maven Build scripts** and **Log4j**.
- ❖ Strong hands-on experience in **containerizing Java applications using Docker** and deploying them in **Kubernetes** clusters (EKS/GKE/AKS).
- ❖ Skilled in **CI/CD automation**, microservices architecture, cloud-native development, and **agile methodologies**.
- ❖ Excellent Working knowledge of **version control systems** like **GIT** for integrating a variety of applications.
- ❖ Expert in writing **SQL** queries using **PL/SQL, triggers**, and stored procedures in **Oracle, MySQL, and DB2**.
- ❖ Solid understanding of how the **Software Development Life Cycle (SDLC)** works including Requirements Gathering, Analysis, Design, Development, Testing, Quality Review, and Product Support/Maintenance.
- ❖ Strong interpersonal and communication skills, especially when dealing with clients, teams, and management.

TECHNICAL SKILLS:

Programming Languages	JAVA, J2EE, SQL, PL/SQL
Application Frameworks	Spring IOC, Spring JDBC, Spring Security, Spring Boot, MicroServices, Spring Batch, Hibernate ORM, Spring Data, Spring JDBC,
Web Technologies	HTML 5, CSS 3, JavaScript ES5/ES6, Typescript, Bootstrap, SASS, LESS, AJAX and XML.
Frameworks/Libraries	Angular 2/4/5/6/7/8/9/10/11/12/13/14/15, React JS, Redux, Angular JS, jQuery, Node JS, Awesome Fonts.
Application/Web Servers	IBM WebSphere, Oracle WebLogic, JBOSS, Apache Tomcat

Web Services	SOAP, REST
Methodologies	Agile, Waterfall, SCRUM
Cloud	AWS
Editors/IDEs	Eclipse, MyEclipse, NetBeans
Version Control	SVN, CVS, Git
Build/CI Tools	Maven, Log4j, Jenkins, Docker, Kubernetes
Bug tracking Tools	Jira
Databases	Oracle SQL, MySQL, DB2, MongoDB
Operating Systems	Windows, iOS, Android

PROFESSIONAL EXPERIENCE:

Sleep Number | Minneapolis, MN

Apr 2024 – Till Date

Full Stack Developer

- ❖ Worked with **Agile team members** on reviewing user stories and translating them into a system design.
- ❖ Improved legacy application by building components using **Angular 15, NPM, Node JS, and Angular Material**.
- ❖ **Implementation of authentication for Restful web services using the Spring Boot Security Starter.**
- ❖ Refactored legacy code to align with **Java 17** standards, leveraging features like sealed classes, pattern matching, and improved garbage collection.
- ❖ Improved **Java 17 code** with new features to ensure efficiency and scalability.
- ❖ Developed **Java applications** that exchange, parse, and generate **JSON data**.
- ❖ Implemented **Agile** and **Scrum** methodologies to develop a **Typescript** and **Angular 15** web application.
- ❖ Incorporated **front-end APIs** with back-end APIs and **posted/got data** from the back-end using **HTTP Client**.
- ❖ Handled component **lifecycle hooks, structural directives, Ng module configuration, cross-component notification services, routing, nested routes, guards, form processing, and validation**.
- ❖ Utilized **Spring Boot** for creating **REST APIs** and microservices in **Java J2EE**.
- ❖ Implemented lambda expressions and functional interfaces in a concise and expressive manner using **Java 11**.
- ❖ Customized **Kafka** producers and consumers to meet specific project requirements, ensuring seamless application communication.
- ❖ Developed **GraphQL APIs** to enable flexible and efficient data retrieval for frontend applications.
- ❖ Configured **Router module** with child routes and route guards to perform routing and navigation of application. ❖ Resolved browser compatibility issues by making the application run in different browsers including **IE11**.
- ❖ Designed schemas, transactions, indexes, sharding, replication, and worked with **MongoDB database concepts**.
- ❖ Developed hooks for **component life cycles, structural directives, Ng Module configuration, services, cross-component notification services, routing and nested routes, guards, and form processing and validation**.
- ❖ Connected with external systems and APIs that communicate using **JSON**.
- ❖ Monitored application performance and logs using tools like **Prometheus and Grafana**.
- ❖ Implemented the **Java Platform Enterprise** Edition by creating and integrating applications using **Apache Tomcat**.
- ❖ Incorporated **JIRA** into project management, issue **tracking, error monitoring, and error correction**.
- ❖ Improved scalability and **integration of applications** across platforms with **Jenkins**.
- ❖ Created **Kubernetes** manifests (Deployments, Services, Ingress, ConfigMaps) for microservice deployment.
- ❖ Used **GIT** to control the version, **Maven** to build the scripts, and configure **log4j** to log the log files.
- ❖ Containerized J2EE microservices using **Docker** to streamline development and deployment workflows.
- ❖ Used **JavaScript ES5** to create cutting-edge user interfaces and components.
- ❖ Collaborated with QA and DevOps teams to validate builds, run regression tests, and deploy updated services without downtime.

Environment: Java 11, Spring, Spring boot, Spring MVC, Angular 15, TypeScript, Node JS, Angular CLI, Angular Material, NPM, Node JS, HTML5, CSS3, Rest, Kafka, Graph QL, Maven, Spring-Data, AWS, Jenkins, MongoDB, Log4j, Prometheus, Grafana, Eclipse, Spring Security, Tomcat, Agile Methodology, SQL, GIT, Docker, Kubernetes, Jira, Windows.

Safeway Insurance Group | Westmont, IL

Sep 2022 – Mar 2024

Full Stack Developer

- ❖ Delivered new features and functionality aligned with business goals by developing scalable, maintainable applications using **React.js** with **Redux** for efficient state management and **Java** backend services.
- ❖ Analyzed, designed, and maintained requirements within Agile/Scrum environments, ensuring iterative delivery and continuous improvement.
- ❖ Developed and enhanced backend logic using **Java 11/17**, including lambda expressions, nested control methods, and utility functions to improve code readability and performance.

- ❖ Utilized **Spring Boot**, **Spring Transaction Management**, **Spring Data**, **Spring AOP**, and **Spring Security** to build robust, secure, and transactionally consistent microservices.
- ❖ Built modern Single Page Applications with **React.js**, leveraging hooks, Redux for global state, and **GraphQL** to efficiently query backend data.
- ❖ Optimized frontend performance and build processes using **Webpack**, Babel, and other modern bundling tools.
- ❖ Developed and consumed REST and **GraphQL** APIs using HTTP methods such as GET, POST, PUT, and DELETE for seamless client-server communication.
- ❖ Created reusable, responsive UI components styled with **Bootstrap** and **SASS**, ensuring cross-browser compatibility and mobile responsiveness.
- ❖ Implemented secure authentication and authorization flows using **OAuth 2.0** in backend APIs and integrated with React frontend.
- ❖ Developed and deployed serverless functions on **AWS Lambda** to support backend API processing and application workflows.
- ❖ Parsed and utilized JSON responses effectively from REST and GraphQL endpoints to drive frontend state and UI updates.
- ❖ Utilized **Docker Compose** for orchestrating multi-container environments locally and in testing stages, facilitating consistent development setups.
- ❖ Created and managed **MongoDB** data models and used Hibernate ORM for efficient database interaction through HQL and Criteria API.
- ❖ Diagnosed and troubleshoot Java applications deployed on **Apache Tomcat**, ensuring stability and performance.
- ❖ Managed build and dependency workflows using **Maven** and maintained continuous integration pipelines with **Jenkins**.
- ❖ Collaborated with the development team using **Git/GitHub** for version control, and tracked progress and issues with **JIRA**.
- ❖ Maintained adherence to Java coding standards and best practices through rigorous code reviews and testing.
- ❖ Assisted with system administration tasks such as user management, file permissions, and data backups to support smooth application operations.

Environment: Java 17, Spring Boot, Microservices, Spring Transaction Management, Spring Data, Spring AOP, Spring Security, React.js, Redux, GraphQL, OAuth 2.0, AWS Lambda, REST APIs, Docker, Docker Compose, Maven, Jenkins, MongoDB, Hibernate, Bootstrap, SASS, Webpack, Node.js, Git, GitHub, JIRA, Apache Tomcat, Agile, Windows, Unix

Spring Bank | Brookfield, WI

Nov 2019 – Aug 2022

Full Stack Developer

- ❖ Implemented and tested the application during a variety of iterations using the **'Agile Development Methodology/SCRUM'**.
- ❖ Created cloud Microservices using **Spring Boot** framework, and developed **Spring-based** applications quickly and with a minimum of configuration.
- ❖ Developed client-side validation variables using **TypeScript**, **Bootstrap**, and **HTML5** to enable data to meet specific criteria.
- ❖ Implemented **Angular 8/10** and **HTTP Observables** to implement functions to acquire data from **REST Web Service**.
- ❖ Used **angular's component-based architecture** for consuming **REST APIs**.
- ❖ Implemented **HTTP Requests** using Observables and looped around results using their functions.
- ❖ Utilized **Java 8+'s** compact profiles to develop applications targeted at a variety of deployment environments with a reduced memory footprint.
- ❖ Used **Java 8** Stream API to run efficient and functional-style operations on streams and collections.
- ❖ Adapted the new Date and Time API introduced in **Java 8** to handle date and time (**java.time package**).
- ❖ Implemented **Spring Data JPA** as the persistence layer for the application.
- ❖ Migrated existing applications into **REST-based Microservices** powered by **Spring Boot** for all **CRUD operations**.
- ❖ Updated **Jira Tickets** on a regular basis on their status and completed on time.
- ❖ Added the Optional class to **Java 8** and higher to avoid **NullPointerExceptions** when handling potentially null values.
- ❖ Utilized **NgRx** library for the state management of the application, which can be found here.
- ❖ Implemented key functionalities using **custom, self-contained, reusable, and testable Angular modules, components, and services**.
- ❖ Deployed **Jenkins** to **AWS** using **Continuous Delivery / Continuous Integration (CD/CI)**.
- ❖ Implemented the **Spring AOP Programming** framework for logging.
- ❖ Integrated AWS client APIs with **AWS** Console configuration for **AWS EC2**.
- ❖ Developed the code and managed the servers using **AWS Lambda**.
- ❖ Utilized **Maven** to develop and deploy the application on an **embedded Tomcat server**.
- ❖ Implemented **Jenkins** as a **continuous integration/continuous deployment** tool to ensure an error-free application throughout the entire development process.
- ❖ Contributed to the maintenance of the **GIT** repository, ensuring that the source code was maintained.
- ❖ Managed and built dependencies using **Maven**.

Environment: Java 8, Spring, Spring Boot, Microservices, Spring JPA, REST, JAX RS, AWS, Jenkins, Oracle, WebLogic, Apache Tomcat, Angular 8/10, TypeScript, Angular CLI, NPM, Node JS, HTML5, CSS3, Rest API, Bootstrap, GIT, LOG4J, Agile, Windows.

J2EE Developer

- ❖ Actively participated in Agile ceremonies including sprint planning, design sessions, and estimations to support iterative development and ensure adherence to Test-Driven Development (TDD) practices.
- ❖ Developed dynamic user interfaces using **React.js**, leveraging component-based architecture and hooks to build reusable, maintainable UI components.
- ❖ Configured Apache CXF to run JAX-RS services, integrating with Spring Data and Spring JDBC templates through both XML and Java-based configurations.
- ❖ Enhanced Java 8 codebase by implementing lambda expressions to improve readability and simplify complex logic.
- ❖ Utilized **Optional** methods such as map, filter, and orElse to safely handle nullable values and avoid null pointer exceptions.
- ❖ Managed security concerns by configuring **Spring Security** within applications developed using Spring IOC, Spring MVC, Spring Batch, and Spring Boot.
- ❖ Improved application throughput by implementing multithreading to handle multiple concurrent requests efficiently.
- ❖ Analyzed and optimized relational database schemas using Hibernate ORM with annotations and XML configurations to improve data access performance.
- ❖ Extensively used Spring JDBC for developing DAO layers to interact with databases effectively.
- ❖ Established Hibernate database connections using XML configuration files for seamless ORM integration.
- ❖ Deployed applications on Apache Tomcat servers, managing builds and deployments via Maven.
- ❖ Installed and configured Apache Tomcat, developing and maintaining web components for scalable applications.
- ❖ Automated build and deployment pipelines using Jenkins for continuous integration, and managed source control with Git for version tracking and collaboration.

Environment: React.js, Java 8, Apache CXF, JAX-RS, Spring Data, Spring JDBC, Spring Security, Spring IOC, Spring MVC, Spring Batch, Spring Boot, Hibernate, Maven, Apache Tomcat, Jenkins, Git, TDD, Agile
