Summary Details

- Data Analyst with 4 years of experience in healthcare and research data management, specializing in cleaning, validating, and analyzing large structured and unstructured datasets. Skilled in SQL, Tableau, Python, and R for building analyzable databases, implementing data management plans, and ensuring compliance with quality control standards. Proven ability to deliver accurate clinical and financial reports, support research studies, and prepare statistical analyses for internal and external audiences. Adept at training staff on electronic recordkeeping systems, documenting technical processes, and collaborating with medical faculty, interns, and program teams to ensure timely, high-quality data for decision-making and publications.

Education Details

University of central missouri,Kansas,USA
Masters, Computer Science GPA: 3.7/4.0

Aug 2024 – Dec 2025

Technical Skills

Analytics & Data Science

SQL Analytics • Statistical Analysis • Hypothesis Testing • Regression Modeling • Data Profiling • Data Quality Assessment •

Research & Clinical Data Analysis

Data Engineering & Databases

Advanced SQL • Query Optimization • Performance Tuning • Indexing Strategies • CTEs & Window Functions • ETL Validation •

Data Pipeline QA • MS SQL Server

Business Intelligence

Tableau • Power BI • Dashboard Development • KPI Reporting • Executive Reporting • Data Modeling • Automated Reporting Programming

Python (Pandas, NumPy) • R (Statistical Analysis, Modeling) • Excel (PivotTables, Macros/VBA, Advanced Formulas)

Data Governance & Quality

Data Validation Frameworks • Data Integrity Controls • Reconciliation Reporting • Compliance & Audit Readiness • Exception Monitoring

Professional Stakeholder Collaboration • Cross-Functional Communication • Documentation • Process Improvement • Training & Knowledge Sharing

Work Experience

Client: western union,Remote | Role:Data Analyst

Aug 2025 – Dec 2025

Responsibilities:

- Designed and validated clinical datasets for cardiology and patient research, improving reporting accuracy by 30%
- Built Tableau dashboards and SQL-driven reports summarizing patient outcomes and financial metrics for leadership and medical staff
- Applied statistical analysis in Python and R to support research studies, including hypothesis testing and regression models
- Developed data management plans and compliance processes, ensuring quality control and audit readiness across reporting layers
- Automated reporting pipelines with Excel Macros and PivotTables, reducing manual preparation by 20+ hours per month
- Partnered with interns, residents, and faculty to generate statistical analyses and prepare materials for manuscripts and presentations
- Trained staff on recordkeeping systems and validated data integration from EHR exports, improving data quality by 40%

Environment: SQL,PowerBI, Tableau, Python, R, Excel, MS SQL Server, Clinical Datasets, Data Validation, Statistical Analysis

Client: Synchrony Financial| Capgemini,Hyderbad,India|Sr.Data Analyst|

Mar 2023-Aug 2024

Responsibilities:

- Developed ETL pipelines processing millions of financial records weekly for enterprise reporting and analytics
- Built Ab Initio graphs for large-scale data extraction, transformation, and loading
- Integrated data from relational databases and flat files into Oracle DWH, enabling timely data access for reporting teams
- Optimized ETL jobs and SQL logic, reducing batch runtimes by 20–25%
- Implemented data validation and reconciliation checks, reducing data discrepancies by 30%+

- Scheduled and monitored 50+ batch jobs using AutoSys to ensure on-time data delivery
- Troubleshot production failures and reduced recurring job failures by ~40%
- Maintained metadata and data lineage documentation to support audit and governance needs
- Enabled reliable datasets used by BI teams for financial reporting and business insights

Environment: Ab Initio, Oracle SQL, PL/SQL, UNIX, AutoSys, Data Warehousing

Client: Citi Bank|Capgemini,Hyderbad,India |Data Analyst

Nov 2021 – Feb2023

Responsibilities:

- Optimized SQL pipelines supporting 10+ BI dashboards used for operational and management reporting
- Refactored SQL queries using joins, CTEs, and indexing, improving query performance by 20–30%
- Implemented automated data quality checks improving reporting reliability
- Developed source-to-target reconciliation reports across multiple datasets
- Created exception reports reducing reporting errors by 25%+
- Collaborated with ETL and BI teams to resolve pipeline issues and discrepancies
- Documented validation and governance standards to support compliance and audits
- Delivered reliable datasets enabling data-driven decision-making

Environment: MS SQL Server, Advanced SQL, ETL Pipelines, Data Quality, Power BI, Tableau

Certifications:

-
- HackerRank SQL (Advanced) Certification - Issued by Hacker Rank
 - Microsoft Certified: Power BI Data Analyst Associate
