SUMMARY

Supply Chain and Logistics Professional with 3+ years of experience successfully leading logistics operations, distribution optimization, and inventory management across large-scale retail networks. Skilled in SAP S/4HANA, Oracle SCM Cloud, Blue Yonder, and JD Edwards for demand planning, warehouse management, and transportation optimization. Experienced in using Power BI, Tableau, SQL, Python (pandas), and Alteryx to develop analytics dashboards, perform root-cause analysis, and improve forecast accuracy, which resulted in \$3.1M in annual cost savings. Skilled in route optimization, network modeling, and KPI tracking (Lead Time, OTIF, Fill Rate) supporting data-driven decisions across \$75M+ weekly distribution flows. Collaborated with cross-functional teams to streamline workflows, reduce truck dwell times by 30%, and align supply operations with sustainability initiatives under #ZeroHungerZeroWaste.

WORK EXPERIENCE

Kroger, USA| Supply Chain Analyst

Sep 2024– Present

- Optimized inventory movements across 44 distribution centers and 2,800 stores, ensuring product availability for 10M+ daily customers by leveraging SAP S/4HANA and Oracle SCM Cloud.
- Eliminated 500+ manual purchase entries weekly by integrating shipment and order data via Dell Boomi and Blue Yonder, automating regional store replenishment workflows.
- Enhanced executive visibility into \$75M of weekly distribution flow by building Power BI dashboards consolidating SQL and SAP HANA warehouse, freight, and vendor metrics.
- Reduced stock imbalances across 35 states and 20K+ SKUs by aligning sales and supply forecasts through JD Edwards and Tableau collaboration with demand planners.
- Saved \$3.1M in missed-service costs annually by conducting root-cause analysis on delayed replenishments using Alteryx and Python (pandas) to pinpoint vendor and carrier inefficiencies.
- Improved dock turnover rate by 31% (5.5 hrs → 3.8 hrs) through applying Six Sigma (DMAIC) methods to streamline pallet routing and inbound dock scheduling across regional DCs.
- Supported corporate ESG goals (#ZeroHungerZeroWaste) by collaborating with logistics and procurement teams to implement eco-certified packaging and optimize sustainable warehouse layouts.

DHL,India| Logistic Analyst

Jun 2021– Aug 2023

- Achieved on-time delivery for 1,500+ weekly shipments by monitoring end-to-end freight operations in SAP TM and Oracle TMS and resolving route delays through coordination with regional hubs.
- Improved logistics performance visibility by building Tableau dashboards consolidating data from WMS, SAP TM, and GPS trackers, enabling management to track transit lead times and carrier reliability.
- Reduced average vehicle dwell time by 31% (4.5 → 3.1 hours per trip) by reconfiguring inbound/outbound warehouse scheduling and implementing automated gate pass and slot allocation systems.
- Increased shipment forecast accuracy by 12,000+ orders per quarter by developing Excel Power Query and Alteryx workflows to automate demand prediction across three distribution centers.
- Ensured 100% trade compliance by validating export documentation with customs and compliance teams, aligning with HS codes, INCOTERMS, and regional regulations.
- Enhanced visibility for 10,000+ shipments by collaborating with 3PL vendors, planners, and warehouse teams and developing Oracle TMS–Power BI KPI dashboards for faster issue resolution.
- Enabled optimization by building Python and SQL models for lane forecasting, mode selection, and allocation.
- Resolved carrier lane inefficiencies affecting 1.8M+ shipment records by executing root cause analysis in Tableau and SQL, reducing delays and improving operational throughput.

PROJECTS

- Inventory Reorder Analysis** – Designed an Excel-based reorder simulation that synchronized planned vs. actual stock levels across 3 regional warehouses, reducing emergency purchase orders by 140 per quarter through automated low-stock triggers.
- Warehouse Stock Management Insights** – Developed Power BI dashboards with DAX calculations integrating WMS and ERP data, enabling warehouse leads to track SKU turnover and safety-stock levels across 5,000+ items in real time.
- Distribution Optimization Study** – Conducted reorder cycle and fulfillment pattern analysis using Excel and Power BI, improving supplier replenishment cadence and cutting average backorder volume by 1,800 units per month.

SKILLS

Supply Chain Methodologies & Process Improvement: Demand Planning, Logistics Coordination, Route Optimization, Inventory Management, Network Modeling, Lean Six Sigma, Just-in-Time (JIT), Continuous Process Improvement, Kaizen

Analytics & Reporting: Advanced Excel (Pivot Tables, Power Query, VBA/Macros), Power BI, Tableau, KPI Tracking (Lead Time, OTIF, Fill Rate), Forecast Accuracy, Inventory Optimization, Cost Modeling, Scenario & What-if Analysis

ERP & Supply Chain Systems: SAP S/4HANA (MM, EWM, TM), Oracle SCM Cloud, JD Edwards EnterpriseOne, Blue Yonder (JDA), Transportation Management Systems (TMS), Warehouse Management Systems (WMS)

Databases & Data Management: SQL (MS SQL Server, MySQL), Python (pandas), Alteryx, Data Warehousing, Master Data Management (MDM), Cloud Platforms (AWS), Data Integration & Validation

Collaboration & Stakeholder Management: Cross-functional Team Collaboration, 3PL Coordination, Vendor & Carrier Management, Supply Network Planning, Logistics Performance Monitoring, Audit Readiness, Change Management

EDUCATION

Master of Science in Business Analytics(Logistics and Supply)| University of Massachusetts, Boston

May 2025
