Full Stack Engineer

[Portfolio](#) • [Linkedin](#) • [Github](#) • [Stackoverflow](#) • [dev.to](#)

Summary

- Cool shark full stack engineer with 12+ years of experiences, specialized in integrating advanced AI solutions into full stack systems.
- Skilled in designing and managing distributed microservices with Python, JavaScript/TypeScript and Node.js . Proficient in messaging systems like Kafka and RabbitMQ to ensure reliable service communication.
- Expert in Cloud Platforms (AWS, Azure, GCP, Heroku), especially AWS (EC2, S3, Lambda, SQS, ALB, DynamoDB, SageMaker)
- Sculptor in micro-frontend architecture using JavaScript/TypeScript, React.js, Next.js and Angular, delivering pixel-perfect designs, performance optimization and accessibility.
- Fast-paced startup specialist driving innovation, scaling systems and delivering critical features under tight deadlines
- Collaborative team contributor with experience in Agile, Scrum, and TDD, mentoring peers, conducting code reviews, and delivering clean, reusable, and well-documented solutions.

Skills

- **Architecture:** Monorepo, Microservice, Event-Driven Architecture
- **Languages & Frameworks:** Python, FastAPI, Flask, Java, TypeScript/Javascript(ES6+), React.js, Next.js (Page & App Router), Angular, Node.js, Express.js, Nest.js
- **Frontend Development:** UI Performance Optimization, Rendering & Reconciliation, Webpack, Vite, Babel, Gulp, Seven-One-Structure, Redux/React Query, Zustand, TailwindCSS, MUI
- **Backend & Database:** PostgreSQL, MySQL, MongoDB, Snowflake, Supabase, Firebase, DynamoDB, Redis, WebSocket, Neo4j, BigQuery, RabbitMQ, Kafka, Pub/Sub, Elasticsearch, GraphQL, REST API
- **AI/ ML:** LLM, RAG, LangChain, LangGraph, Yolo, PySpark, Claude, OpenAI, PyTorch, TensorFlow, Hugging Face
- **Cloud & Devops:** AWS(EC2, S3, Lambda, Cognito, Kinesis, DynamoDB, SageMaker), Azure(CosmosDB, SignalR, Blob Storage), Google Cloud Platform (GCP, BigQuery), Terraform, Docker, Kubernetes, Jenkins, CI/CD, Bash, Shell, Linux, Nginx, Datadog, Prometheus, Grafana, ELK Stackm, Ansible
- **Third party & Vendors:** Amplitude, Zapier, Payment Gateway(Stripe), Docusign, Zoom, Calendly, D3.js, Three.js, Chart.js, Mapbox GL JS, Google Maps JavaScript API
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **Testing Tools:** PyTest, JUnit, Jest, Mockito, Postman, Selenium, JMeter
- **Project Management & Methodologies:** Agile, Scrum, TDD, DDD, SDLC, CI/CD Pipelines
- **Security & Compliance:** OAuth2, JWT, Spring Security, Role-Based Access Control, Secure Coding Practices
- **Collaboration & Leadership:** Agile Methodologies, Startup Environment, Cross-Functional Collaboration, Technical Leadership, Mentorship, Consultant

Experience

[Ellipsis Health](#)

Senior Software Engineer

California, United States

03/2024 – Present

- Designed and delivered the scalable monorepo architecture using FastAPI, React, and AWS, accelerating development velocity by 30% and enabling reliable multi-environment deployments.
- Built and managed a secure API ecosystem on AWS, leveraging API Gateway, Lambda, and RDS (PostgreSQL) to ensure high availability, fault tolerance, and efficient serverless compute.
- Engineered distributed backend modules within a unified monorepo, enabling reliable communication via RabbitMQ, Kafka, and REST, and supporting 2M+ inter-module messages/day.
- Implemented comprehensive API documentation and testing via Swagger/OpenAPI, improving integration workflows and boosting developer productivity by 25%.
- Strengthened platform security with OAuth2, JWT auth, IAM roles/policies, ensuring compliant, secure access to sensitive healthcare data.
- Built real-time features using WebSockets and introduced Redis caching, reducing DB query load by 45%, improving dashboard responsiveness by 30%, and supporting 30K+ concurrent users.
- Enhanced clinician dashboards with lazy loading, code splitting, and memoization, significantly improving initial load performance and UI responsiveness.
- Built and maintained database schemas using SQLAlchemy ORM and Alembic, enabling safe, version-controlled migrations and consistent schema updates across the monorepo.
- Built automated ETL pipelines syncing PostgreSQL/DynamoDB with Elasticsearch, ensuring data consistency and powering analytics for 30K+ active users.
- Integrated Amplitude analytics and Feature Flags to enable controlled rollouts, A/B testing, and real-time user behavior insights across monorepo modules.
- Implemented Zapier automation workflows to streamline cross-system data sync, notifications, and operational tasks, reducing manual effort and improving workflow reliability.
- Created large-scale data transformation workflows using Pandas/Numpy, reducing preprocessing time by 60% and improving downstream AI model accuracy.
- Integrated Generative AI (OpenAI APIs) into clinician dashboards, enabling automated mental-health assessments and personalized patient insights.
- Accelerated engineering throughput by 35% using AI-assisted development tools (GitHub Copilot, Cursor AI, code-search automation) to reduce boilerplate and speed up prototyping.
- Designed and maintained robust CI/CD pipelines with GitHub Actions and Jenkins, automating build/test/deploy and reducing release cycles by 40%.
- Collaborated in Agile/Scrum teams, consistently exceeding sprint goals and improving team velocity by 25% through effective planning, communication, and delivery.
- Mentored junior engineers on architecture, debugging, and best practices, improving overall team output quality by 20%.

[Bittensor](#)

Toronto, Canada

Senior Software Engineer

10/2021– 02/2024

- Designed and implemented microservices architectures with Python (FastAPI) and Node.js, enabling modular, distributed systems for decentralized networks, achieving 98% API call efficiency under 200ms latency for millions of users in Decentralized AI platform.
- Designed and optimized RESTful and GraphQL APIs, enabling seamless data exchange between distributed services and front-end applications, reducing integration time by 40%.

- Developed asynchronous job processing systems with Python, handling large-scale data ingest, batch processing, and scheduled tasks to support analytics and reporting pipelines.
- Designed and maintained micro-front-end architectures with React and Next.js, supporting modular development and scalable deployments for decentralized platforms.
- Built reusable, optimized React components and implemented advanced state management using Redux and Context API, reducing UI response latency and improving Lighthouse performance scores by 30%.
- Implemented robust error handling, logging, and monitoring solutions using Prometheus, Grafana, and ELK stack, delivering actionable insights and rapid incident response.
- Developed blockchain-enabled user interfaces for crypto payment gateways, integrating real-time transaction tracking and wallet management using React, WebSockets, and RESTful APIs.
- Integrated transformer-based NLP models (GPT-4, BERT) and Retrieval-Augmented Generation (RAG) into React dashboards, providing real-time sentiment analysis, document search, and chatbot capabilities.
- Managed end-to-end CI/CD pipelines and infrastructure-as-code deployments using Docker, AWS (EC2, Lambda, Fargate, ECS, EKS, S3, DynamoDB), GCP, and Terraform, supporting OTA updates and scaling for over 50M users.

Net Solutions

California, United States

Full Stack Developer

06/2016 – 09/2021

- Played an integral part in shaping the web presence of over 10 elite brands including Automotive, Healthcare, Media, Publishing & Entertainment, Education and Training, Sports and Fitness, Retail & eCommerce and Food & Beverage.
- Utilized Next.js's SSG capabilities to pre-render product pages at build time, significantly reducing server load and improving user experience, allowing for faster navigation and a 30% decrease in bounce rates.
- Integrated and customized WordPress and Shopify platforms to enhance eCommerce experiences. Developed plugins and themes tailored to client needs, ensuring seamless user interactions and optimized site performance.
- Integrated Neo4j graph database to model complex relationships within marketing and CRM data, enabling advanced network analysis and improving data query efficiency by 30%.

Education

Bachelor's Degree in Computer Science, [Brooklyn College](#)

Brooklyn, NY, United States (03/2012–05/2016)
