## EDUCATION

### University at Buffalo – SUNY

Aug 2024 - Dec 2025

*Master of Science, Computer Science and Engineering*

• GPA: 3.3/4.0

### Kalinga Institute of Industrial Technology

Sep 2020 - May 2024

*Bachelor of Engineering, Computer Science and System Engineering*

• GPA: 3.4/4.0

## PROJECTS

### Scalable Microservices-Based Order Processing System

- Built a microservices architecture using Java and Spring Boot, separating order, payment, and inventory services with RESTful APIs, supporting 50K+ daily transactions.
- Dockerized services and implemented CI/CD pipelines with GitHub Actions, reducing deployment time by 60% and enabling zero-downtime releases.
- Optimized database queries and inter-service communication, improving throughput by 30% and reducing API latency by 25%; deployed on AWS EC2 with 99.9% uptime.

### Distributed Log Aggregation and Monitoring System

- Developed a centralized logging system using Python, Flask, and Elasticsearch to collect logs from 20+ distributed services, processing 1M+ log events/day.
- Containerized log producers and consumers with Docker and built Kibana dashboards to visualize system health in real time.
- Reduced debugging time (MTTR) by 40% and improved incident detection speed by 35%.

### High-Performance API Gateway with Authentication & Rate Limiting

- Designed a production-grade API Gateway using Node.js and Express.js, routing traffic across 10+ backend services.
- Implemented JWT-based authentication and Redis-backed rate limiting, preventing 99% of unauthorized or abusive requests.
- Load-tested the system to handle 10,000+ concurrent requests, achieving sub-100ms response times under peak load.

## EXPERIENCE

### SplashBI

Jul 2023 - Oct 2023

*Business Analyst*

- Analyzed business requirements using SQL and Excel, applying computer science concepts and software development lifecycle principles to translate them into data models and functional specs, reducing reporting inconsistencies by 18%.
- Developed automated dashboards and KPI reports in Tableau and Power BI, integrating data via cloud services, improving decision-making efficiency by 22%.
- Collaborated with cross-functional teams throughout the software development lifecycle on data validation, UAT, and root-cause analysis, increasing process efficiency by 20%.

## SKILLS

- **Programming Languages:** Java, Python, C++, C, JavaScript, SQL
- **Technologies:** Spring Boot, Node.js, Express.js, Flask, REST APIs, Microservices Architecture, MySQL, MongoDB, Redis, Back-End Web Development
- **DevOps & Tools:** Git, GitHub, GitHub Actions (CI/CD), Docker, AWS, Linux, Bash, Cloud Services
- **Core:** Data Structures & Algorithms, Object-Oriented Design, Design Patterns, Database Systems, Operating Systems, SDLC, Agile/Scrum, Computer Science Concepts

## CERTIFICATIONS & ACTIVITIES

- Amazon Web Services Academy – Sem 1, 2 (2023)
- Amazon Web Services – Data Analytics (2023)
