Education

University of Colorado Boulder | GPA: 3.9/4.0

Boulder, CO

Masters of Science in Computer Science

Aug 2024 - May 2026

Coursework: *Design and Analysis of Algorithms, Computer Vision, Neural Networks and Deep Learning, Natural Language Processing, Big Data Architecture*

Vasavi College of Engineering | GPA: 3.9/4.0

Hyderabad, IN

Bachelor of Science in Computer Science

Aug 2019 - May 2023

Coursework: *Data Structures, Machine Learning, Operating Systems, Software Engineering, Object oriented programming, Database Management, Computer Networks, Artificial Intelligence, Computer Security and ethical hacking*

Technical Skills

Languages: Python, Java, C, C++, HTML, CSS, JavaScript, SQL

Libraries: OpenCV, Pillow, PyTesseract, TensorFlow, Keras, Pandas, Pytorch, Scikitlearn, Matplotlib, BeautifulSoup4

Frameworks/Tools: Flask, React, VS Code, Eclipse, Git, Postman

Others: CI/CD, Docker, Agile, Selenium, REST API, Devops, AWS Lambda, Bedrock, Transformers, LLMs, OpenAI, BERT, RAG, Prompt Engineering, Copilot, Claude, TCP, UDP, Networking protocols, PostgreSQL, S3, SAML 2.0, OpenID Connect

Work Experience

Software Intern | Office of Information Technology (OIT), CU Boulder

June 2025 - Present

- Built an LLM-powered, serverless license compliance platform on AWS, enabling automated risk analysis of software license agreements with human in the loop validation.
- Developed AWS S3 hosted python web app, implementing Cognito authentication (SAML 2.0 / OpenID Connect) and secure document ingestion using pre-signed URLs
- Designed a serverless orchestration pipeline (API Gateway → Lambda → SQS) to process documents and invoke LLM agents on AWS Bedrock (Claude Sonnet & Haiku) using prompt engineering.
- Implemented RAG pipeline, comparing incoming clauses against documents in S3 vector DB using similarity scoring to reuse validated responses. Automated email draft generation using EventBridge scheduling, with approved responses stored in S3

Technology Spring Analyst Intern | Morgan Stanley

Jan 2023 - Jul 2023

- Developed a Python-Selenium framework for UI visual bug detection, utilizing OpenCV, Pillow, and PyTesseract, achieving 95% automation testing performance and benefitting for 10+ Wealth Management teams; patent filed.
- Automated 99% of manual testing by utilizing PyTesseract for text extraction, and comparing different widgets, layouts, and scrolling states with OpenCV and image similarity algorithms, ensuring UI consistency across various components.
- Spearheaded an OpenAI PoC for quality validation by implementing semantic search with Torch on documents retrieved from multiple endpoints, leveraging NLP and Hugging Face transformers (BERT), achieving 90% accuracy in bot response validation.

Research Intern | Vasavi College of Engineering

Aug 2022 - Dec 2022

- Designed a CNN model using Tensorflow, keras on APTOS dataset to predict the likelihood of Diabetic Retinopathy within the range of 0-5 indicating the severity of the blindness. Attained a 94% performance rate across 3,662 eye images.
- Optimized model performance through hyperparameter tuning, data augmentation (rotation, flipping), and image preprocessing using OpenCV, improving feature extraction by 30% and classification accuracy by 15%.

Projects

AutSA - Autism Social Aid | Python, Flask, API, DeepFace, MoviePy, SpeechRecognition, OpenCV, NLP, Javascript

- * Developed an AI-driven web application to assist autistic individuals by analyzing 100+ video and audio samples, integrating DeepFace for facial emotion recognition (92% accuracy) and SpeechRecognition for speech-to-text conversion. Leveraged OpenAI API for 99% precise response generation, embedded text-to-speech for accessibility, and optimized video processing efficiency by 30% using OpenCV and MoviePy. Built a Flask backend with a responsive frontend.

Hacker News Clone | Flask, Python, MySQL, BeautifulSoup4, HTML, Bootstrap, CSS, Apache Server

- * Created a Hacker News clone with web scraping to extract articles and store them in a structured database (articles, users, relations). Designed authentication (login, registration) and CRUD operations (mark as read, delete), improving user engagement by 60% through separate workflows for logged-in and logged-out users. Optimized SQL queries for efficient article display, deployed the application on an Apache server, and managed the database with phpMyAdmin.

Certifications and Achievements

Certifications: Programming through C++, Python Programming, Data Structures, and Algorithms

Awards: Honored to have a patent filed for the internship project showcased in the Monthly Innovation Series (June 2023) of Morgan Stanley's Wealth Management. Received the Merit Award for outstanding academic performance, ranking 2nd in the Computer Science department (2020).

Hackathons: Runner up in "AI in Health Care - 2024" Hackathon hosted by T9hacks.

Leadership / Extracurricular

- * **Volunteer - Stree Cause:** Guided career development sessions on goal setting and career aspirations, influencing 100+ girls at Chevella Kasturba School, promoting women empowerment, and impacting 80% of participants.
