

PROFESSIONAL SUMMARY:

Extensive 8 years of experience in designing and implementing new security systems, troubleshooting security installations, and ensuring adherence to performance and compliance standards. Expert in developing and scaling real-time data streaming pipelines using Apache Kafka, including managing Kafka clusters, configuring Kafka Streams, and optimizing Kafka producers/consumers. Strong command over Confluent Kafka, event-driven architectures, microservices, and RESTful APIs using C# and .NET Core on Azure Cloud. Skilled in monitoring Kafka components, reducing technical debt, and improving system efficiency and scalability. Proven ability to lead architecture decisions balancing software elegance with live customer needs, collaborate cross-functionally with engineering leadership and product managers, and support peer code reviews. Experienced in deploying services using Docker, Azure Message Services, and Kubernetes in Agile environments.

TECHNICAL SKILLS:

Programming Languages:	C#.Net, JavaScript, jQuery
Microsoft Technologies:	.net core, .Net 6, ASP.NET, ADO.NET, AJAX, LINQ, MVC, Entity Framework, Web Services, WCF, Web API, Azure Data Bricks, Azure Data Lake, Azure Data Factory, Azure Power Apps and Azure DevOps, PowerApps, PowerBI, Power AutomateFlow.
Web Technologies:	ASP .Net 8/4.5/ 4.0/3.5/3.0, JavaScript, Angular JS, Angular 6/8/10/13/14, Bootstrap, jQuery Font. React, HTML, DHTML, CSS, XSLT, XML.
Databases:	SQL Server
Development Tools:	Visual Studio 2022/2017/2015/2012/2010, SQL, Management Studio
Version Control:	GIT Hub, VSS, TFS2015/2010, Tortoise SVN
Cloud:	Azure Cloud Services
Web Servers:	IIS 4.0/5/0/6.0/7.0
Methodologies:	SDLC, UML, OOAD (Object-Oriented analysis and design), Agile, Waterfall
Testing Tools:	Jasmine, Fiddler, SoapUI, Post Man, Swagger, Jest
Platforms:	Windows 10/7,
Others:	MS Office, MS Visio, XML, XSLT, Dapper, Toad, SQL Profiler, SSRS, SSIS

WORK EXPERIENCE:

Senior Software Engineer
Microsoft. Redmond, WA

12/2024 – Present

- Built and maintained enterprise-grade web applications using .NET Core, React, and Dataverse
- Led the design and implementation of secure systems for Power Platform solutions, aligning with loss prevention and audit capabilities.
- Developed RESTful APIs and deployed .NET Core microservices for real-time communication between systems using Azure Message Services.
- Designed service-oriented architecture and implemented event-driven messaging workflows using Confluent Kafka.
- Built and maintained scalable distributed systems in Azure Cloud using Kubernetes, Docker, and DevOps pipelines.
- Collaborated with cross-functional teams and participated in peer code reviews and mentoring initiatives.
- Engineered secure, cloud-native apps on Azure with DevOps pipelines and real-time Power BI dashboards
- Automated infrastructure tasks and implemented intelligent workflows via Power Apps + Power Automate
- Led backend design for user story management tools integrated with Azure Boards.

Software Engineer
T-Mobile. Seattle, WA

04/2024 – 12/2024

- Implemented SSO solutions using OAuth and SAML protocols, integrating with enterprise systems to streamline user authentication.
- Implemented event-driven architecture using Kafka producers/consumers to process real-time streaming data.
- Conducted code reviews, unit testing, and deployed services to Kubernetes clusters with Azure cloud scalability.
- Actively contributed to SDLC Agile ceremonies including sprint planning, reviews, and retrospectives.
- Managed staging and development deployments for applications, ensuring seamless transitions between environments.
- Upgraded legacy .NET applications to .NET 8, optimizing performance and leveraging new features.
- Developed RESTful APIs and services using .NET Core, MongoDB, supporting scalable and reliable data access.
- Designed MongoDB schemas and performed migrations to support evolving application requirements.
- Collaborated with QA team to perform unit testing, integration testing, and regression testing to ensure high-quality deliverables.
- Participated in daily stand-ups, sprint planning, and retrospective meetings to drive continuous improvement in development processes.

Lead Software Engineer

Lansing Board of Water and Light (LBWL) Lansing, MI

04/2023 – 03/2024

- Pioneered a DevOps-centric approach, automating API deployment pipelines on Azure DevOps and reducing release cycles by 40%.
- Developed .NET applications using C#, ASP.NET, HTML, and JavaScript.
- Utilized RxJS observables and operators to build responsive and reactive front-end applications in TypeScript.
- Integrated architectural design patterns such as Model-View-Controller (MVC) and Model-View-View-Model (MVVM) into application development.
- Strategically leveraged Azure Data Factory to orchestrate seamless data pipelines, enhancing efficiency and empowering data-driven decision-making across the organization
- Proficient in (TDD) testing frameworks, implementing the red-green-refactor cycle, and
- Led the development and optimization of critical applications, including Mapcon And BCP applications, resulting in a 50% reduction in manual intervention, improved reliability, and enhanced end-to-end functionality. Notably, streamlined data processing through the design and optimization of stored procedures, achieving a 55% reduction in query execution times.
- Integrated various data sources including REST APIs, SQL Databases, Azure BLOB storage, flat files, Excel.
- Developed and adapted ETL pipelines using SQL Server Integration Services (SSIS)
- Enhanced application performance by introducing Azure Key Vault, a pivotal code change that significantly improved security measures and streamlined access to sensitive information.
- Showcased mastery managing Microsoft Power Pages, creating a dynamic stage for Dataverse information.
- Managed and maintained SSIS packages for seamless data extraction, transformation, and loading

Full-Stack Developer

AmerisourceBergen Dallas, Texas

03/2022 - 03/2023

- Utilized industry-standard CI/CD tools such as Jenkins, DevOps CI/CD, and Travis CI to automate build, test, and deployment processes
- Developed and deployed microservices-based architectures using .NET Core and C#.
- Designed real-time data integrations with Azure services and Confluent Kafka, ensuring scalability and compliance.
- Demonstrated cross-functional collaboration, rapid adaptation to new requirements, and adherence to cloud compliance standards.
- Revolutionized data workflows using Azure Data Factory, enhancing efficiency and boosting system performance
- Developed the UI applications using Angular 10 (along with Angular UI components, Bootstrap etc) which uses the core application data.
- Led the design and development of ASP.NET application (PME), seamlessly integrating the Data Access Layer and User Interface.
- Renowned for championing Test-Driven Development (TDD) excellence, I elevate code quality through meticulous unit testing and automation
- Implemented a Patient Matching and Testing Recommendation component for oncologists, providing a sophisticated solution for efficient patient data management. This component streamlined testing recommendations, contributing to enhanced decision-making processes for oncologist.

- Implemented RESTful APIs for seamless integration with third-party services, enhancing overall system functionality and interoperability
- Extensively used Team Foundation server for shelving the code changes, check in the code and tracking defects and requirements
- The SDLC methodology 'Agile' is widely followed in the project, with regular scrum meetings and triage meetings to discuss about the project updates.
- Code review within the team is preformed using code flow

Software Developer

Navient Indianapolis, IN

06/2020 - 02/2022

- Developed and maintained desktop applications using Windows Forms and WPF, with version control and issue tracking handled through TFS.
- Contributed to microservices-based enhancements using .NET Core and Azure for distributed desktop applications.
- Practiced SDLC and Agile methodologies, with deep involvement in automated pipelines and peer code reviews.
- Collaborated closely with clients to assess project requirements, provide technical recommendations, and deliver customized software solutions while tracking changes and tasks within TFS
- Actively participated in debugging, testing, and resolving software defects, resulting in
- Designed and implemented a TFS-based continuous integration (CI) pipeline, reducing
- build times by 30% and ensuring code quality through automated testing and validation
- Maintained and expanded unit tests to uphold software quality standards and minimize post-release issues, with test cases managed in TFS.
- Promoted a culture of knowledge sharing and continuous improvement through active involvement in code reviews, team collaboration, and agile practices using TFS/Azure DevOps
- Setting up Connection Strings and connecting SQL Server Databases from locally Installed SQL Server Management Studio (SSMS).

.Net Developer

CDC Health & Human Services Atlanta, GA

04/2016 - 06/2020

- Spearheaded the design and development of robust ASP.NET applications, seamlessly weaving together the Data Access Layer and User Interface to deliver unparalleled end- to-end solutions
- Created login-based member's area that displays ASP.NET MVC web pages based on
- access levels and assigned Roles.
- Orchestrated seamless migration of on-premises APIs to Azure Cloud, ensuring scalability and optimal performance.
- Crafted captivating user experiences with rich, user-friendly features using jQuery, JavaScript, and Angular JS
- Orchestrate the seamless integration of .NET solutions with existing healthcare frameworks, databases, and third-party applications, ensuring a harmonious and uninterrupted flow of critical healthcare data.
- Successfully orchestrated the migration of on-premises legacy applications to Azure, showcasing prowess in cloud transformation.
- Leveraged Entity Framework and LINQ queries to perform agile and efficient database operations.
- Innovated with service calls using WCF and introduced advanced messaging functionality with MAPI for client programs
- Championed Agile SDLC methodology, orchestrating regular scrum and triage meetings that fueled an atmosphere of continuous improvement.

EDUCATION:

- Bachelor of Commerce, MS University of Baroda., Gujarat
- Masters in Professional Accounting, Holmes College, Sydney, Australia

CERTIFICATION:

- Certified Scrum Product Owner 2023
- Certified reactive developer - Out System
- Certificate in Microsoft AZ900 - 2018
