Computer science graduate with experience in application development, backend system management, and enterprise infrastructure support. While at IBM, adeptly resolved complex Linux system issues and independently developed Python applications, SQL databases, and networked systems. Proficient in problem analysis, code debugging, and deploying reliable solutions. Seeking an entry-level analyst or developer role to make immediate contributions and further develop technical expertise.

TECHNICAL SKILLS

Programming

Python, SQL, MySQL, C/C++, Java, JavaScript, Bash, Assembly, Git, GDB, REST APIs, Data Structures & Algorithms

Methodologies

Agile, Scrum

Systems & Networking

nux, TCP/IP, UDP, HTTP/HTTPS, Firewalls (UFW, iptables), Wireshark

Cloud & DevOps

WS (EC2, S3), CI/CD (GitHub Actions, Jenkins), Docker, Kubernetes

PROFESSIONAL EXPERIENCE

IBM, Systems Analyst

05/2023 – 07/2025 | Ashburn, VA

- Resolved hardware and software issues across enterprise servers
- Monitored production systems and verified performance metrics
- Troubleshoot and recovered Linux systems using rescue environments and boot configs
- Documented incidents and resolutions in PeopleSoft (IMS) and JIRA
- Assisted with upgrades and hardware replacements to improve reliability

Freelance Software Developer

05/2022 – Present | Remote

- Built Python applications and backend systems for academic and small business projects
- Designed and optimized SQL databases and workflows for efficiency
- Developed client-server applications with Python sockets and REST APIs
- Containerized applications with Docker for consistent deployment
- Configured Linux environments and basic cloud infrastructure for hosting

EDUCATION

University of Maryland (UMBC),

Bachelor of Science, Computer Science

05/2025 | Baltimore, MD

Frederick Community College,

Associate of Science, Computer Science

05/2022 | Frederick, MD

PROJECTS

Security & Systems Projects

- Stack Smash Pwn Lab: Demonstrated buffer overflow exploits using GDB
- Clickjacking Security Lab: Implemented UI redressing attacks and CSP defenses with Docker
- DDoS Mitigation Simulation: Simulated UDP and Slowloris attacks and applied firewall rules

Networking Projects

- Socket Protocol Engine: Built a concurrent client-server protocol in Python
- IPv6-over-IPv Tunnel: Configured dual-stack tunnels and validated traffic with Wireshark
- Docker Network Routing Lab: Created containerized networks with custom IP routing

Database Systems Projects

- Hospital DB Management System: Designed multi-user ER-modeled database with concurrency control
- Advanced Library DB: Developed triggers, stored procedures, and transactional workflows
- Library DB Foundations: Implemented relational schemas and optimized complex queries
