

Foram Nilesb Bhanushali

(949) 678-2074 | fbhanush@uci.edu | LinkedIn/foram-bhanushali21 | Github/Fo-rum | Portfolio/fo-rum.github.io

Education

University of California, Irvine, CA

Sep 2023 - Dec 2024

Master of Computer Science

GPA: 3.98/4.0

Relevant Courses: Data Structures & Algorithms, Distributed Systems, Operating Systems, Machine Learning

KJ Somaiya College of Engineering, India

Aug 2017 - Jul 2021

Bachelor of Technology in Computer Engineering

GPA: 3.7/4.0

Technical Skills

Languages: Python, JavaScript, Typescript, SQL | **Databases:** PostgreSQL, MongoDB, Redis, Snowflake, MySQL

Frameworks & Libraries: React.js, Next.js, Django, Flask, Express.js, Node.js, FastAPI, Redux

Frontend: HTML5, CSS3, Responsive & Accessible UI (Flexbox, Grid), Tooling (Vite, ESLint)

Infrastructure & DevOps: AWS (Lambda, S3, EC2, EKS, Glue, CDK), Docker, Kubernetes, GitHub Actions, CI/CD

Messaging: GraphQL, BullMQ, Kafka | **Machine Learning & AI:** LangChain, OpenAI(GPT-4), PyTorch

Professional Experience

Software Development Engineer

Feb 2025 - Present

Donald Bren School of Information and Computer Sciences

Irvine, CA

- Automate retrieval of **10K+ research papers** via Semantic Scholar and arXiv APIs, reducing manual searching
- Boost topic relevance using **TF-IDF** and **cosine similarity** algorithm, based on citations, author influence, and recency
- Implement **Redis caching** to serve frequent academic queries from memory, reducing latency and API load
- Build a **Django** and **FastAPI** dashboard with crawlers to fetch research papers from academic APIs based on user queries

Software Development Engineer Intern

Jan 2024 - Sep 2024

University of California, Irvine

Irvine, CA

- Designed a smart course recommender for UCI students with Flask, MongoDB, and GPT to personalize academic plans
- Tripled engagement by turning **Figma** designs into a **React.js** and **Redux** dashboard with responsive, accessible design
- Increased course recommendation accuracy by 20% via few-shot OpenAI prompts and iterative GPT tuning with **LangChain**
- Reduced API payloads by 40% with a **GraphQL** layer over **MongoDB**, optimizing nested course and rating queries
- Accelerated transcript parsing by 50% by integrating Tesseract OCR with **Kafka** for concurrent processing of user uploads
- Containerized services and deployed to **Kubernetes** via **Helm** on **AWS EKS**, enabling modular scalability
- Engineered distributed microservices with **Flask** and **React**, leading a 4-member agile team and conducting code reviews

Software Development Engineer

Sep 2021 - Jun 2023

Max Developer

Mumbai, India

- Delivered a SaaS e-commerce platform using MERN, enabling a seamless shopping experience and streamlining operations
- Lowered API response times by 25% with **Redis** caching and optimized MongoDB queries to accelerate product search
- Elevated user engagement 15% by optimizing React component rendering and ensuring responsive, cross-browser design
- Implemented secure authentication with **OAuth 2.0** and **JWT**-based role access control, enabling protected user workflows
- Streamlined checkout with Stripe's hosted flow and webhook confirmations for verified payments and smooth user experience
- Reduced manual workload by **8 hours/week** by building a custom admin dashboard for inventory management
- Maintained 99.99% uptime with AWS EC2 deployments, CI/CD via GitHub Actions, and enforced code quality by **ESLint**

Projects

ResuMatch | LangChain, GPT-4, FastAPI, OpenAI API, Streamlit, AWS Lambda, AWS CDK, API Gateway, S3

- Built an **AI-powered** assistant using **GPT-4** and LangChain to analyze resumes against job descriptions, generating semantic match scores (0-100) and actionable feedback
- Architected a serverless backend with FastAPI, **AWS Lambda**, and S3 using **CDK** for scalability and fault tolerance
- Implemented caching in **DynamoDB** to reduce overhead and maintain low-latency performance during spiky workloads
- Created a **customer-facing** Streamlit frontend to visualize GPT-based resume insights and improve job targeting

LocateCareers | Next.js, Django, PostgreSQL, AWS S3, AWS Glue, Snowflake, GraphQL

- Developed a full-stack job portal with geolocation search using MapQuest API, resume uploads with AWS S3, and RBAC
- Improved performance by increasing **load speed by 40%** with **Next.js server-side rendering**, reducing payload size by 30% with GraphQL, and implementing efficient filtering and data management with Django and **PostgreSQL**
- Automated job metadata ETL using **AWS Glue** and loaded into **Snowflake** to power analytics and trend insights

CodeTogether | React.js, Node.js, Express.js, Socket.io, CodeMirror, Docker

- Created a collaborative code editor in React with CodeMirror, supporting syntax highlighting and multi-language editing
- Designed a modular **Node.js** and **Express** backend for room creation, session rejoin, and multi-user state management
- Containerized the setup using **Docker Compose** for supporting consistent local development and reproducible environments

CollabBoard | React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, Redis, BullMQ, Jest

- Engineered a task coordination platform to streamline coordination among remote teams with shared boards
- Devised asynchronous queuing infrastructure with Redis and **BullMQ** to manage delayed emails with retry logic
- Validated critical workflows by writing integration tests using **Jest** and **Supertest**, covering edge cases and auth flows
