

NEERAJ SAI KONDAVEETI

Open to Relocate | +1 (447) 902-6552 | nsk9@illinois.edu | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Supply chain and procurement analytics professional with 5+ years of experience supporting new product development, supplier management, purchase order execution, and cross-functional team collaboration. Proven ability to manage multiple parts/projects simultaneously while maintaining on-time delivery performance, cost control, and quality standards. Strong track record of partnering with internal stakeholders and external vendors to achieve launch dates, minimize costs, and drive continuous improvement. Experienced in SAP and Microsoft Office with analytical rigor, attention to detail, and results-driven accountability across complex, fast-paced environments.

EDUCATION

University of Illinois Urbana–Champaign Aug 2024 – May 2026
M.S. Information Management

PROFESSIONAL EXPERIENCE

University of Illinois Veterinary Medicine College | Student Data Engineer | Champaign, IL Aug 2025 – Present

- **Built repeatable data validation workflows:** for quality and accuracy: implemented checks for completeness, duplicates, and mapping integrity using Excel and SQL; reduced recurring data issues by 20% and improved delivery consistency
- **Created stakeholder reporting dashboards:** to drive results: developed Power BI/Excel summaries for trends and exceptions; improved decision cadence and reduced manual effort by 35% through clear, timely communication of key metrics
- **Improved delivery consistency through documentation:** and process controls: created technical documentation and validation frameworks for system enhancements, strengthening handoffs and repeatability for production-style reporting environments
- **Supported data reconciliation and metric performance:** performed quality checks across releases (before/after comparisons, exception logs), improving trust in numbers used for operational decision-making and maintaining audit-ready standards
- **Standardized documentation to support continuous improvement:** created refresh steps and definitions to support consistent reporting; improved self-sufficiency and reduced follow-up requests by 25% through clear process notes

Business Intelligence Group (UIUC) | Technical Consultant | Champaign, IL Aug 2024 – Present

- **Managed multiple projects with prioritization:** to achieve deadlines: maintained action logs and status updates for pending items; improved closure discipline and reduced missed handoffs by 15% through structured task management
- **Built Excel reconciliation trackers:** for accuracy and cost control: created PivotTable-based views to validate totals and identify mismatches; improved data consistency by 18% and reduced rework by 10% supporting budget adherence
- **Prepared reporting packs and communication:** for stakeholders: assembled quarterly-style summaries in PowerPoint/Word; improved clarity and decision speed for cross-functional teams through timely, professional deliverables
- **Produced finance-style reporting responses:** with quick turnaround: collected, analyzed, and summarized data into Excel/PowerPoint deliverables; improved turnaround time by 20% with reusable templates supporting metric performance
- **Converted ambiguous asks into clear requirements:** and commitments: facilitated working sessions and documented success metrics; reduced rework by 25% and improved stakeholder alignment by holding self accountable and respectfully others

Capgemini | Senior Data Analyst (Procurement / Finance Analytics) | Hyderabad, India Jun 2022 – Aug 2024

- **Managed supplier performance and vendor coordination:** tracked delivery commitments, pricing accuracy, quality metrics, and MOQ compliance; improved closure time by 20% through structured follow-ups and issue resolution cadence with domestic and foreign suppliers
- **Executed purchase order management and cost control:** processed and maintained purchase orders for materials and tooling, ensured timely price/quantity/cost updates, and addressed invoice discrepancies; reduced reporting errors by 25% and improved cost accuracy through validation controls
- **Supported cross-functional team collaboration:** for project success: partnered with operations, finance, and procurement teams to align on goals, communicate part status, and resolve changes to plans; improved stakeholder satisfaction and reduced rework through proactive problem-solving
- **Delivered quarterly financial reporting and metric performance:** built Excel models to summarize procurement and finance metrics across cycles, tracked on-time delivery, costs, and PPAP submissions; improved quarterly reporting readiness by 30% through standardized trackers and audit-ready documentation
- **Drove continuous improvement and cost minimization:** automated repeatable reporting workflows using Python and SQL routines, reducing cycle time by 30%; maintained metric definitions and process controls that reduced rework by 25% and improved handoff quality
- **Achieved delivery performance goals through monitoring:** created exception logs and source-to-report checks for key datasets, managed purchase orders to minimize risk and support service levels; maintained 95%+ data consistency standards supporting operational decision-making
- **Partnered cross-functionally on approvals:** and business case support: gathered requirements, validated outputs, supported UAT-style confirmations, and contributed to NPD business case development; improved alignment and reduced rework through clear communication and documentation

Capgemini | Data Analyst Intern | Hyderabad, India Jan 2022 – Jun 2022

- **Managed material set-up and maintenance:** with attention to accuracy: owned ERP and supply chain workflows across Oracle EBS and SAP, supporting O2C/P2P processes to improve financial and operational efficiency in business-facing engagements
- **Built high-scale data pipelines:** for procurement operations: engineered and optimized SQL ETL pipelines supporting multi-million record datasets, improving reliability of downstream reporting and enabling on-time, accurate metric performance
- **Delivered automation to minimize cost:** and cycle time: led an automated reporting platform using Python and Oracle SQL with modular, OOP-based architecture, improving maintainability and repeatability for business-critical reporting cycles and reducing manual effort
- **Improved system performance to support delivery commitments:** built and tuned data integration APIs connecting Oracle EBS with third-party tools, improving end-to-end system performance by 40% via optimized data exchange patterns and query-level tuning
- **Enabled risk management visibility for operations:** collaborated with engineering teams on monitoring dashboards and scenario models for supply chain risk management, supporting leadership decision-making with measurable operational signals and proactive issue identification

- › **Strengthened forecasting accuracy and quality improvements:** performed statistical analysis and root-cause modeling that improved forecasting accuracy and reduced reporting error rates across operational planning workflows supporting NPD timelines
 - › **Led stakeholder working sessions for requirements clarity:** gathered requirements, translated them into technical specs (data mappings, validations, success metrics), and drove UAT signoff, reducing rework and improving business satisfaction across complex projects
- Noobtron | Research & Development Intern | Hyderabad, India** **Jan 2021 – Jan 2022**
- › **Improved operational efficiency and service delivery:** built an NLP chatbot to automate ERP/supply chain queries; reduced manual support load and improved workflow speed for enterprise-scale decision support
 - › **Integrated diverse sources for planning and analysis:** developed REST services for real-time visibility and applied ML signals; improved exception identification and planning insights for enterprise-scale decision support
 - › **Created documentation to support knowledge transfer:** documented repeatable steps so new analysts could execute reporting without heavy oversight, supporting continuous improvement and efficiency gains

TECHNICAL SKILLS

Supply Chain & Procurement: supplier performance management, vendor relationship management, purchase order execution and tracking, on-time delivery performance, material set-up and maintenance, parts management, cost control and MOQ adherence, E&O mitigation, PPAP coordination, supplier claims management, spend analysis, supplier rebate calculations, credit note tracking, procurement reconciliation

ERP & Business Systems: SAP, Oracle E-Business Suite (EBS: AR, AP, GL), Order-to-Cash (O2C), Procure-to-Pay (P2P), ERP implementation support, ERP data migration, material master data management

Analytics & Reporting: Excel (PivotTables, Power Query, XLOOKUP/VLOOKUP, SUMIFS/COUNTIFS, reconciliation models), Power BI, Tableau, variance analysis, exception logs, KPI reporting, quarterly financial reporting, audit trails, month/quarter close support, data validation, root-cause analysis

Database & Automation: Advanced SQL (Oracle), SQL ETL pipelines, Python (Pandas/NumPy), data modeling, API integration, Java (OOP, multi-threading), process automation

Project & Process Management: SDLC/Agile, JIRA, cross-functional team collaboration, stakeholder communication, business process mapping, documentation and knowledge transfer, continuous improvement, problem-solving, metric performance tracking

Communication & Collaboration: Microsoft Office (Word/PowerPoint/Outlook), vendor communication, internal and external stakeholder engagement, status updates, working sessions, international vendor coordination

PROJECTS

Quarterly Rebate & Credit Tracker: Built rebate calculation model with vendor-level calculations, claim status, credit note capture, and reconciliation checks; improved visibility and reduced follow-up gaps supporting cost control and supplier management

AP Reconciliation Exception Log: Improved reconciliation discipline through audit-trail log for mismatches, root causes, and resolution owners; reduced recurring discrepancies and improved closure speed supporting on-time delivery performance

RFQ Price Benchmark & Award Scenario Model (Excel, SQL): Built award scenario comparisons with supplier quote inputs, cost drivers, and terms into repeatable model; improved sourcing recommendation speed by 25% through standardized scoring supporting cost minimization

Supplier Savings & Opportunity Dashboard (Power BI, Excel): Enabled leadership reporting on savings by tracking supplier-proposed savings, status, and realization signals; improved visibility and governance cadence for senior stakeholders supporting business case development

Daily Demand Forecast Monitor & Replenishment Alerts (SQL, Python, Power BI, Regression ML): Automated daily forecast and KPI monitoring with jobs to refresh demand forecasts and compute forecast accuracy, stockout risk, and backorder rate; improved responsiveness by 30% with exception-based alerts. Reduced obsolescence risk via inventory health signals by building aging/slow-mover detection and obsolescence indicators; helped prioritize actions on high-risk SKUs and reduced excess exposure by 10–15% supporting E&O mitigation

Process Improvement Playbook – Rebates & Credits: Standardized workflow by documenting step-by-step processes, timelines, and control points; improved repeatability and reduced onboarding time supporting continuous improvement initiatives
