

Divyansh Singh Raikwar

theraikwar7@gmail.com — +91-7068980207 — LinkedIn — GitHub — LeetCode

Summary

Software Engineering undergraduate experienced in building **scalable backend and full-stack systems**. Strong in **Python, Java, React, FastAPI, REST APIs, DSA, and system design**, with hands-on experience deploying production-ready applications and applying machine learning to real-world problems.

Education

University Institute of Engineering and Technology, Kurukshetra	2022 – 2026
B.Tech in Computer Science and Engineering	CGPA: 8.0
Kurukshetra, Haryana	

Experience

Initiator — etaiyari 	July 2024 – jan 2026
<i>Full Stack Developer</i>	

- Built and scaled an exam-preparation platform supporting **9 major Indian exams**, serving **400+ users** with **7K+ interactions**.
- Designed secure teacher and student authentication with role-based access control.
- Integrated **Razorpay** payment gateway and implemented content watermarking for content protection.
- Developed a purchase dashboard with PDF preview, order workflow, and transaction tracking.
- Deployed and maintained the platform on a Linux VPS ensuring reliability and scalability.
- **Tech:** Flask, MySQL, JavaScript, Jinja2, Razorpay API, Linux

Projects

SmartMail AI — AI Email Management Platform 	2026
---	------

- Built an AI-powered email system for smart categorization, tracking, and automated follow-ups.
- Integrated **Gmail OAuth 2.0** and LLM-based classification (Job, Interview, Offer, Rejection).
- Implemented automated workflows using **Celery + Redis**.
- Designed scalable REST APIs using FastAPI with async background workers.
- **Tech:** FastAPI, React, MySQL, Redis, Celery, LLM APIs, AWS

Allergen Detector 	2025
--	------

- Built an OCR-based system to detect allergens from packaged food ingredient images.
- Implemented ingredient-allergen mapping to classify food as **Safe** or **Warning**.
- Integrated MongoDB Atlas for authentication and session handling.
- Added a crowdsourced data module to improve ingredient coverage.
- **Tech:** Python, Flask, MongoDB, Pytesseract, PIL, JavaScript

Doct-i — AI Healthcare Platform 	2025
--	------

- Trained ML models (Gradient Boosting, Random Forest) for disease prediction with probability ranking.
- Built a TensorFlow-based skin disease classifier and exposed it via Flask APIs.
- Designed a weighted doctor recommendation engine based on symptoms and specialization.
- Developed an NLP-based symptom chatbot using Dialogflow.
- **Tech:** Python, Scikit-learn, TensorFlow, Flask, Pandas, Dialogflow

Technical Skills

Languages: Python, Java, JavaScript

Frontend: React, HTML, CSS

Backend: Flask, FastAPI, Node.js, REST APIs

Databases & Tools: MySQL, MongoDB, Git, Docker, CI/CD, AWS, Linux

ML / AI: Scikit-learn, TensorFlow, NLP, OCR

CS Fundamentals: Data Structures, Algorithms, OOP, System Design, DBMS

Certifications and Achievements

- Solved **400+ LeetCode problems**; strong DSA and problem-solving foundation.
- Winner — **TechVision Hackathon**; finalist in **6+ ML/AI hackathons**; **330+ github commits**.
- Completed ML Training (Internshala) and AWS Cloud Practitioner Training (GeeksforGeeks).
