

DARIEM CARLOS MACIAS MORA

Miami, FL | 786-717-8625 | softevolutionsl@gmail.com | [LinkedIn](#) | [GitHub](#) | [Who am](#)

Summary

Technically proficient and meticulous Software Engineer with expertise in the .NET Core framework and C#. Over 10 years of experience in writing efficient code, testing and deploying applications, and optimizing software performance. Proficient in troubleshooting and debugging, gathering and analyzing user feedback, and developing thorough technical documentation.

Portfolio & Proof of Concept

- [GitHub Portfolio](#) – Showcases proof-of-concept projects in secure API design, event-driven microservices, ETL pipeline optimization, cloud modernization, and AI-powered SaaS solutions and more.
- [Project Showcase](#) (Azure Static Web App).

Education

University of Computer Sciences, Havana, Cuba

Bachelor of Science (BS), Computer Science (GPA: 3.15/4.00)

Technical Skills

- **Programming Languages:** C#, T-SQL query language, HTML, CSS, JavaScript, TypeScript, SOLID Principles, OOP Fundamentals
- **Frameworks/Libraries:** .NET Core, Entity Framework Core, LINQ, Base knowledge of Blazor, VUE.js
- **Tools/IDE:** Visual Studio, Visual Studio Code, Git, TFCV, Azure DevOps Docker, POSTMAN, BMC Control-M Workload Automation, Swagger
- **Database Systems:** MS SQL Server, MySQL, SSIS, SSRS, Microsoft Report Builder Tool, MS Power BI
- **AI & Cognitive Services:** Azure OpenAI (ChatGPT, Embedding), Azure Cognitive Services (Text Analytics, sentiment analysis)
- **Cloud Platforms:** Microsoft Azure, Docker, CI/CD Pipelines
- **Web Services:** Restful APIs Architectural Style, Controller-based APIs, Minimal APIs
- **Software Architecture and Design Patterns:** Vertical Slice, Modular Monolith plus Clean and Onion soft. architectures base knowledge, Strategy, Mediator, Observer, Decorator, Singleton Design Patterns
- **Soft skills:** Solution-oriented mindset, self-discipline, creative, hard-working, collaborative approach to solve problems and achieve goals, good at conflicts resolution, driving change and innovation, skilled in organizing time and prioritizing responsibilities

Work Experience

MDCPS | Miami Dade County Public Schools | *Software Engineer/Application Support.*

Apr 2021 - Present

- Migration of a .Net Web-Form legacy application to a modern web-based system using ASP.NET Core, C#, Entity Framework Core, and MSSQL databases, Bootstrap Framework.
- Optimized system architecture using key design patterns to significantly boost performance, scalability, and maintainability.
- Developed RESTful APIs to facilitate communication between different components of the software system applying principles like Idempotency, Versioning, Filtering, Pagination, Sorting, and Security.
- Enhanced API documentation with Swagger, significantly boosting team collaboration and cutting developer onboarding time by over 75%.
- Implemented unit and integration tests using XUnit and Moq for code quality and reliability reducing margin of bugs by 90%.
- Designed and developed cloud-based applications using microservice architecture and event-driven communication for asynchronous processing, leveraging Azure services such as Event Grid, Azure Functions, and Blob Storage for scalable and efficient system integration.
- Enhanced interactive web applications with Blazor's component-based architecture, significantly boosting user engagement and reducing load times.
- Designed and deployed AI-driven web applications using Azure OpenAI and Cognitive Services, automating sentiment analysis and review classification workflows—reducing manual processing by 60% and enhancing user engagement through conversational interfaces.
- Integrated Azure Cognitive Services (Text Analytics, Sentiment Analysis) to enrich application features with intelligent data extraction and accessibility enhancements, improving data usability and customer experience metrics by 45%
- Optimized database operations with Caching, Global Exceptions Handling, Logging, and Health Check mechanisms improving applications performance by 24%.
- Redesigned SSIS ETL pipeline for SAP Maintenance Master Data by implementing lookup-based deduplication and delta processing, reducing job runtimes by 70% and eliminating redundant full-table loads while ensuring auditability and data integrity.
- Optimized deployment workflows by implementing CI/CD pipelines using Azure DevOps and GitHub Actions, accelerating release cycles by 40% and enhancing team productivity through Agile collaboration.
- Developed complex queries and reports using SSRS for effective resource allocation and data-driven decision-making.
- Enhanced database query efficiency and boosted system performance by 20% through strategic optimization initiatives.

- Mentored junior engineers by providing guidance on coding techniques, design patterns, debugging strategies, etc.
- Significantly enhanced system stability and reduced defects by overseeing rigorous code reviews that ensured strict adherence to Entity Framework Core standards.

HHS/HHSC of Texas with Kforce Inc | *Software Support Specialist.*

Jun 2020 - Nov 2020

- Provided first-level technical support and analysis to identify, investigate, and resolve root causes of software problems and coding issues in various applications.
- Contributed to the creation of comprehensive knowledge base articles to improve self-service support options.
- Managed critical incidents and performed root cause analysis to promptly identify and resolve application issues.
- Conducted root cause analysis of software issues and implemented corrective actions to prevent recurrence.
- Resolved software-related issues reported by customers via phone, email, or ticketing system to ensure timely resolution and customer satisfaction.
- Fixed software problems and tested solutions before implementation, obtaining and logging customer feedback for process improvement.
- Developed and maintained support documentation, including knowledge base articles and troubleshooting guides.
- Reviewed work logs and customer feedback periodically with supervisors and other analysts to identify and act on opportunities for improvement.
- Implemented Global Exception Handling mechanism in .NET Core apps with C# for enhanced error handling and application stability.

Freelance | *Software Developer and Client Support.*

Oct 2019 - May 2020

- Provided first-level technical support and analysis to identify, investigate, and resolve root causes of software problems and coding issues in various applications.
- Conducted testing and debugging software applications to identify and fix issues, ensuring software quality and reliability.
- Resolved time-sensitive software-related issues reported by customers via phone, email, or ticketing system to ensure timely resolution and customer satisfaction.
- Fixed software problems and tested solutions before implementation, obtaining and logging customer feedback for process improvement.
- Updated and redesigned company websites to align with product feature improvements and stay competitive.
- Reviewed work logs and customer feedback periodically with supervisors and other analysts to identify and act on opportunities for improvement.
- Conducted user training sessions to promote software adoption and enhance end-user proficiency.
- Collaborated with other freelancers' software engineers as well to optimize software performance and functionality.
- Utilized agile project management tools (e.g., Trello) for tracking progress and managing tasks within the development team.

Biolab S.A. | *Software Support Engineer.*

Mar 2016 - Aug 2019

- Developed and deployed software solutions with ASP.NET MVC, C#, and SQL Server, resulting in a 20% increase in system efficiency and boosting user satisfaction.
- Collaborated with clients to troubleshoot compiler, language, and programming issues, enhancing client satisfaction and reducing issue resolution time
- Developed interactive dashboards using Microsoft Power BI to visualize data insights, enabling better decision-making and data-driven strategies
- Utilized proficiency in .NET Core and C# technologies to streamline development processes, resulting in faster project completion and improved code quality
- Provided computer technology training to new employees, increasing their technical skills and reducing onboarding time
- Resolved software support tickets and provided technical assistance to users.
- Conducted software testing and debugging using SSRS and Restful APIs, ensuring optimal performance and reducing system errors
- Documented software issues and resolutions using SSIS for future reference, enhancing team efficiency and knowledge sharing
- Participated in team meetings to discuss project updates and strategies.

Freelancer | *Web Developer and Tech Support.*

Jan 2012 - Oct 2015

- Enhanced software applications with .NET Core and C#, improving performance and user satisfaction.
- Implemented code refactoring and database optimization techniques to improve application performance.
- Created responsive front-end designs using HTML, CSS, and JavaScript for desktop and mobile devices.
- Collaborated with team members to troubleshoot and resolve technical issues Utilized .NET Core and C# to develop scalable and efficient software solutions
- Performed thorough software testing that decreased bugs by 30% and improved software reliability.
- Assisted end-users by resolving software issues, boosting satisfaction and cutting downtime.
- Streamlined team efficiency and knowledge sharing by documenting and standardizing software development processes.
- Spearheaded code reviews, enforcing standards and cutting bugs by 30%.

- Quickly identified and resolved complex technical issues, boosting system reliability and user satisfaction.
- Gathered feedback from stakeholders, implemented changes, and improved product functionality by 30%.
- Streamlined workflows and boosted team collaboration using version control systems Git and SVN.

Desoft S.A. | Junior Software Engineer.

Sep 2007 - Sep 2011

- Boosted user engagement and satisfaction by developing efficient web applications using C# and ASP.NET.
- Participated in code reviews and collaborated with team members to implement new features and enhancements.
- Tested and debugged software applications to identify and fix issues, ensuring software quality and reliability.
- Provided technical support to end-users, troubleshooting issues and providing timely resolutions.
- Developed and optimized CRUD operations for product information management, enhancing data efficiency and boosting accuracy by 20%.
- Documented technical specifications, architecture, and UML diagrams for software projects.
- Collaborated with QA teams to define test plans and ensure software quality through rigorous testing.
- Enhanced software development with .NET Core, increasing application speed by 20% and boosting scalability.
- Engineered and optimized high-performance applications in C#, boosting system efficiency and enhancing user experience.

Certifications

- Microsoft Course Certified : [Create Serverless Application.](#)
- Microsoft Course Certified: [App Deployment with Azure App Service.](#)
- Microsoft Course Certified: [Manage Resources in Azure.](#)
- Coursera Project Network: [Azure DevOps Board.](#)
- Microsoft Course Certified: [Connect Your Services with Microsoft Azure Service Bus](#)
