

Professional Summary:

- 5 years of delivering measurable results as a Data Analyst, transforming data into insights that fuel business growth and strategic decisions.
- Skilled in building interactive dashboards, KPI tracking systems, and performance reports.
- Experienced in conducting Exploratory Data Analysis (**EDA**) and performing statistical analyses, including hypothesis testing, regression modeling, and clustering to derive actionable insights.
- Strong proficiency in data cleaning, wrangling, and preprocessing using Python libraries such as (**Pandas, NumPy, Matplotlib, Seaborn, Plotly**) R (**ggplot2, dplyr, tidyr**).
- Hands-on experience with **cloud platforms** such as **AWS (Redshift, Athena, Quick Sight)**, **GCP (Big Query, Looker)**, and **Azure (Synapse, Power BI Service)** for large-scale data analytics.
- Strong understanding of the principles of **Data warehousing, Fact tables, Dimension tables, star and Snowflake schema modeling**.
- Hands-on experience with Apache Spark (**PySpark, Spark SQL**), Hadoop (**HDFS, HiveQL, Pig**), Apache **Kafka**, and **Apache NiFi** for big data processing and analysis.
- Skilled in ETL and data pipeline orchestration using **Apache Airflow**, Talend, Informatica, Alteryx, and **Azure Data Factory (ADF)** to automate and streamline data workflows.
- Experience in data visualization and business intelligence tools like **Tableau, Power BI, Looker and Google Data Studio**, enabling real-time reporting and executive dashboards. Experience in creating **Power BI Dashboards (Power View, Power Query, Power Pivot, Power Maps)**.
- Proficient in SQL (**PostgreSQL, MySQL, Snowflake, SQL Server, Cosmos DB**) and **NoSQL databases (DynamoDB, Redis, MongoDB)** for advanced data modeling, querying, and performance optimization.
- Well-versed in data governance, compliance, and security with expertise in Colibra, **AWS IAM, AWS KMS** (encryption), and Google Analytics to ensure data integrity and compliance with industry standards.
- Hand-on experience performing statistical analysis, causal inference and statistical modeling in R and Python, interpreting and analyzing results of hypothesis tests, **A/B tests** and multivariate tests and providing recommendations based on data.
- Experience in developing Map Reduce Programs using **Apache Hadoop** for analyzing the big data as per the requirement.
- Generate weekly reports with visualization using tools such as **MS EXCEL** (Pivot tables and macros), and **Tableau** to enable business decisions making.
- Understanding version control like **Git** is becoming important for collaborating on data-related projects, especially in team settings.

Technical Skills:

Cloud Platforms & Services: AWS (S3, DynamoDB, Lambda, Data Pipeline, CloudTrail, CloudWatch, IAM, KMS, Redshift, Glue, EMR, Kinesis, EC2, RDS), Azure (Databricks, Machine Learning, Functions, Logic Apps, DevOps, Data Factory), Google Cloud (Dataflow, Bigtable, Big Query, Compute Engine, Cloud Storage, Google Analytics, Google Data Studio)

Big Data & Distributed Computing: Apache Spark (PySpark, Spark SQL), Hadoop (HDFS, HiveQL, Pig), Apache NiFi, Apache Kafka

Database & Data Storage: SQL (PostgreSQL, SQL Server, Snowflake, Cosmos DB), NoSQL (DynamoDB, Redis, MongoDB), Data Warehousing (Redshift, Snowflake)

ETL & Data Integration: Apache Airflow, AWS Glue, Informatica, ADF, Google Cloud Dataflow

Programming & Scripting: Python (Pandas, NumPy, SciPy, Scikit-learn, TensorFlow, Keras, PyTorch, OpenCV, spaCy), R (dplyr, tidyr, ggplot2), SQL (T-SQL, PL/SQL, HiveQL, Spark SQL), PowerShell

Data Visualization & Reporting: Tableau, Power BI, Google Data Studio, Excel (Pivot Tables, VLOOKUP, Macros)

CI/CD, Version Control & DevOps: Jenkins, GitHub, GitLab, Azure DevOps, Terraform

Containerization & Orchestration: Docker, Kubernetes

Project Management & Agile: Agile (Scrum, Kanban), Jira, Trello

Certifications

- Google Data Analytics Professional Certificate
- Microsoft Certified: Azure Data Engineer Associate

Professional Experience:

Client: CVS Health, Scottsdale, AZ

May 2023 - Present

Role: Data Analyst

Responsibilities:

- Developed advanced data models using **Python, NumPy, and Pandas** to optimize data analysis workflows, enabling faster decision-making and improving overall operational efficiency.
- Spearheaded real-time data analytics initiatives using **AWS Kinesis** and **Spark Streaming**, providing immediate insights into business-critical data.
- Skilled in advanced data processing, statistical modeling, and predictive analytics, leveraging tools such as **SQL, Python, R, and Tableau** to enhance safety monitoring and proactive risk assessment.
- Expertise in **statistical analysis**, data modeling, and business intelligence to uncover trends and optimize performance metrics.
- Closely collaborated with sales and marketing teams for conducting **A/B testing** to improve and track sales from different channels, using tools like Google Analytics, Python, Tableau, and Big Query.
- Adept at working with **cloud data platforms** such as AWS, Azure, or Google Big Query for scalable data management and analytics.
- Utilized AWS EMR for scalable data processing, leveraging **Hadoop, MapReduce** to handle large-scale batch processing jobs effectively.
- Experienced in **data governance, quality assurance, and compliance** with **GDPR, HIPAA**, ensuring secure and reliable analytics.
- Conducted predictive analytics using machine learning models (**Scikit-learn, TensorFlow**),
- Collaborated with cross-functional teams using **Agile** and **Scrum** methodologies to prioritize and deliver analytics solutions that meet business requirements.
- Experience with ETL (Extract, Transform, Load) processes and tools like **Apache Airflow and Alteryx**.
- Dashboard visualization through Python, **Looker, Tableau BI** application.
- Implemented version control with **GitHub**, ensuring efficient team collaboration maintaining version integrity across data analysis scripts and code. Developed calculated columns and measures using DAX in **Power BI**.
- Identified and gathered the relevant and quality data sources required to fully answer and address the problem for the recommended strategy through testing or exploratory data analysis (**EDA**).
- Generate weekly reports with visualization using tools such as **MS EXCEL** (Pivot tables and macros), and **Tableau** to enable business decisions making.
- Conducted exploratory data analysis using **SQL and PySpark**, identifying correlations and patterns in waste management data to inform strategic initiatives.

Client: Birla soft, India

June 2021 – Nov 2022

Role: Data Analyst

Responsibilities:

- Responsible for technical data governance, enterprise-wide data modeling and database design and developed multidimensional data models to support BI solutions developed as well as other common industry data from external systems.
- Managed **data integration** from multiple sources into DOMO, ensuring data consistency and accuracy.
- Worked with business partners and team members, gathered and analyzed requirements translating them into solutions for database designs supporting transactional system data integration reports, spread sheets, & dashboards.
- Facilitated business meetings to work on the functional/non-functional requirements from BAs/Product Managers.
- Designed and automated interactive KPI dashboards with sentiment scores in **Tableau**.
- Created custom SQL queries on various databases such as Oracle, SQL server, Snowflake for data analysis and data validation.

- Utilized **AWS Glue** for data cataloging, ETL job scheduling, and schema evolution, streamlining the process of preparing data for analysis.
- Understanding services like Big Query, **Cloud Dataflow**, and cloud-based databases can enhance data analysis capabilities
- Performed data profiling and analysis on various datasets like customer profile data, branch hierarchy, contact history and email campaign data.
- Utilized Digital analytics data in extracting business insights and visualized the trends from the customer events tracked.
- Followed **Power BI** best practices to improve the performance and security of enterprise-grade implementations.
- Analyzed existing Business units, Business process, System/ Application and there Interfaces with their capability through open-ended discussions.
- Created scheduled and ad-hoc reports for internal and external departments efficiently using **Excel** and MS Access.
- Developed and maintained reports for both ad-hoc and ongoing business operating needs.
- Prepared dashboards with drill down functions such as date filters, parameters, actions using **Tableau** to reflect the data behavior over time.
- Developed machine learning pipelines using **Apache Beam and MLflow**, automating model training and deployment for waste management predictive analytics.
- Involved in ETL processes to handle data migration from multiple business units and sources including Oracle, Postgres, MSSQL, Access.

Client: Deccan Info Systems, India

Aug 2020 - May 2021

Role: Data Analyst

Responsibilities:

- Worked with data warehouse concepts for data cleaning, data integration, data transformation and also a periodic data of refreshing.
- Elicited and detailed functional system requirements and non-functional system requirements from cross-functional technical teams to identify needs of new analytical environment
- Wrote complex **SQL** queries involving joins, sub queries and creating temporary/volatile tables, using Toad and **SQL Developer**.
- Developed serverless ETL pipelines with **Apache Airflow & dbt**, improving data ingestion speed.
- Managed **JIRA** Dashboards for team project, Sprint reports, Daily burndown reports, Velocity charts and tracking, email communication to senior management on daily accomplishments and Epic completion status for release.
- Worked with QA in identifying test scenarios for data consumption, orders consumption, order schedules and performed data mapping, created Data Mapping in **excel**.
- Data mapping, logical data modeling, created class diagrams and ER diagrams and used SQL queries to filter data within the **Oracle database**.
- Utilized **Python, Pandas, NumPy, and Scikit-learn** to generate data-driven insights, enabling customer segmentation and demand forecasting.
- Developed cloud-based analytics solutions in **AWS (Redshift, Glue, Lambda)** to support real-time data processing.
- Prepared Scripts in **Python and Shell** for Automation of administration tasks.
- Experienced as working on **Power BI** Admin Portal to manage users, capacities, Audit logs and tenants.
- Performed Data Analysis to provide insight over data defects and future state issues that might arise over time during new data migration and
- Automated infrastructure provisioning with **Terraform**, leveraging the best practices of Infrastructure as Code (IaC).
- Responsible for testing the **Data flow**, navigation flow, system testing and functionality testing.
- Managed version control and CI/CD automation using GitLab, streamlining deployment processes and iterative improvements.

Education:

- Master of Science in Business Analytics | Lewis University, IL
- Bachelor of Science in Civil Engineering | Andhra University
