Professional Summary

- Results-driven Data Analyst with 3+ years of IT experience transforming complex datasets into actionable business insights through advanced analytics, statistical modeling, and data visualization
- Proven expertise in SQL, Python, R, Tableau, and Power BI with demonstrated ability to design scalable data pipelines, build predictive models, and develop interactive dashboards that drive strategic decision-making
- Strong technical foundation in ETL processes, data modeling, machine learning, and Big Data technologies (AWS, Azure) with hands-on experience managing end-to-end analytics projects from data collection to insights delivery
- Skilled collaborator adept at partnering with cross-functional teams including engineering, finance, operations, and executive leadership to translate business requirements into data-driven solutions
- Demonstrated success in optimizing operational efficiency, reducing costs by 20+%, and improving performance through process automation, statistical analysis, and predictive analytics

Technical Skills

- **Programming Languages:** Python, SQL, R, Java
- **Data Analysis & Visualization:** Tableau, Power BI, Matplotlib, Seaborn, Advanced Excel (Pivot Tables, VLOOKUP, Macros, Power Query)
- **Database Management:** MySQL, SQL Server, PostgreSQL, Query Optimization, Database Design
- **Big Data & Cloud Platforms:** AWS (S3, Redshift), Azure, Google Cloud Platform, Hadoop, Spark
- **Machine Learning & AI:** Scikit-learn, TensorFlow, Keras, Pandas, NumPy, Predictive Modeling, Deep Learning
- **Data Engineering:** ETL Processes, Data Pipelines, Data Integration, Data Warehousing, Data Migration
- **Business Intelligence:** Dashboard Development, KPI Tracking, Business Analytics, Reporting Automation
- **Tools & Platforms:** Jupyter Notebook, Git, SAS, ERP Systems, JIRA, Confluence, Agile/Scrum
- **Core Competencies:** Statistical Analysis, Data Modeling, Forecasting, A/B Testing, Data Quality Management, Process Optimization, Stakeholder Communication, Requirements Gathering

Professional Experience

Data Analyst

Gordon Food Services, Kentwood, MI

May 2024 – Present

- Design and implement interactive dashboards in Tableau and Power BI, delivering real-time insights into inventory management, supply chain performance, sales trends, and financial KPIs that enable data-driven executive decision-making
- Develop automated data pipelines using Python and SQL to extract, transform, and load (ETL) data from multiple ERP systems and databases, processing over 2 million transactions monthly with 99% accuracy

- Build predictive models using machine learning algorithms (regression, classification, clustering) to forecast demand patterns and optimize inventory levels, reducing stockouts by 18% and overstock costs by 22%
- Conduct advanced customer segmentation analysis using clustering algorithms and statistical methods, improving targeted marketing strategies and increasing customer retention by 12%
- Create anomaly detection and monitoring scripts using machine learning techniques to identify operational risks in supply chain workflows, reducing risk exposure and preventing costly disruptions
- Integrate sales, distribution, and financial data with ERP systems to enable comprehensive performance reporting and analytics across multiple business units and geographical regions
- Collaborate with cross-functional teams including procurement, logistics, finance, and operations to define KPIs, establish analytics frameworks, and drive continuous improvement initiatives
- Perform root cause analysis on operational bottlenecks using statistical methods and data mining techniques, leading to a 15% improvement in delivery efficiency and enhanced customer satisfaction
- Automate recurring analytical reports and dashboards, saving over 20 hours of manual effort monthly while improving data accuracy and enabling real-time business insights
- Support executive leadership with ad-hoc data analysis requests, strategic business reviews, and data storytelling presentations that facilitate informed decision-making and strategic planning
- Leverage AWS cloud services (S3, Redshift) for scalable data storage and processing, ensuring efficient handling of large-scale datasets and complex analytical workloads

Environment: Python, SQL, Tableau, Power BI, AWS, Machine Learning, Jupyter Notebook, Git, ERP Systems

Data Analyst

Infinite Computer Solutions, Hyderabad, India

June 2021 – July 2023

- Developed comprehensive data models and interactive dashboards to analyze client operational metrics, enhancing visibility into key business processes and enabling data-driven performance improvements
- Executed complex SQL queries to extract, transform, and analyze large datasets exceeding 5TB, identifying trends, patterns, and generating actionable insights for business stakeholders and executive teams
- Supported AI-driven project modules focused on predictive maintenance and operational optimization, helping reduce unplanned downtime by 20% and improving overall equipment effectiveness
- Conducted extensive data cleaning, preprocessing, and quality assurance using Python (Pandas, NumPy) and R, improving model accuracy by 15% and establishing data governance best practices
- Designed compelling visual reports and dashboards using Tableau and Power BI, translating complex data findings into clear, actionable insights for non-technical stakeholders and business users
- Collaborated with data engineering teams to automate data ingestion and integration processes from various sources including databases, APIs, flat files, and third-party systems
- Performed statistical analysis including hypothesis testing, correlation analysis, and trend analysis to identify performance improvement opportunities and support business optimization initiatives
- Implemented regression, classification, and time-series forecasting models to support demand planning, customer behavior analysis, and predictive analytics use cases with 88% accuracy
- Participated in Agile/Scrum ceremonies including sprint planning, daily standups, and retrospectives to align project deliverables with business objectives and client requirements

- Documented analytical methodologies, created technical documentation, and maintained knowledge repositories to improve reusability, standardization, and team collaboration across projects
- Conducted A/B testing and experimental design to evaluate business initiatives, measure impact, and provide data-backed recommendations for process improvements
- Presented findings and recommendations to senior stakeholders through data storytelling, visualizations, and executive summaries that facilitated strategic decision-making

Environment: Python, SQL, Tableau, Power BI, Excel, R, Jupyter Notebook, Pandas, NumPy, Statistical Analysis

Education

Master of Science in Computer Science

University at Albany, State University of New York, NY, USA

August 2023 – May 2025

- Relevant Coursework: Advanced Data Analytics, Machine Learning, Statistical Analysis, Database Systems, Big Data Technologies

Bachelor of Technology in Computer Science

Vignan Foundation for Science Technology and Research (VFSTR University), India

2019 – 2023

- Strong foundation in Computer Science, Data Structures, Algorithms, and Quantitative Analysis

Certifications

- Oracle MySQL Implementation Associate (1Z0-922) – Oracle
- AWS Certified Cloud Practitioner (In Progress)
