Summary

Data Analyst with 4+ years delivering business-ready insights across USA and India using SQL, Python, and R. Strong in data cleaning, data wrangling, and EDA to turn raw data into trusted metrics and KPI layers. Build executive dashboards and self-serve reporting with Power BI, Tableau, and Looker. Hands-on across AWS, Azure, and GCP, working with relational and NoSQL/MongoDB data sources. Support AI/ML and NLP initiatives (including TensorFlow workflows) with solid testing methods like A/B and ANOVA.

Skills

Analytics & BI: Power BI, Tableau, Looker, Excel (Pivot Tables, Power Query), KPI Design, Dashboarding, Reporting Automation, Data Storytelling

Programming & Querying: SQL, Python, R

Data Preparation: Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Data Profiling, Data Validation

Databases: Snowflake, BigQuery, PostgreSQL, MongoDB, NoSQL

Cloud Platforms: AWS (S3, Athena), Microsoft Azure, Google Cloud Platform (BigQuery, Cloud Functions)

Statistics & Experimentation: Hypothesis Testing, ANOVA, A/B Testing, Regression Analysis, Cohort Analysis

AI/ML & NLP: Machine Learning, AI Analytics, NLP (Text Classification/Topic Modeling), TensorFlow (model evaluation)

Workflow & Tools: dbt, Airflow, Git, JIRA, Agile/Scrum, Documentation, Stakeholder Management, Feature Engineering

Experience

Data Analyst | ACL Digital

Jul 2024 - Present

- Improved executive decision speed by standardizing KPI definitions and metric lineage using SQL, dbt, and Snowflake, reducing metric conflicts across product, operations, and finance reporting.
- Increased real-time visibility by optimizing ingestion and transformation flows using Python, Airflow, and BigQuery (GCP), enabling faster monitoring of weekly performance and SLA trends.
- Reduced reporting defects by implementing automated data validation and anomaly checks using data cleaning, data wrangling, and Cloud Functions, improving trust in daily dashboards.
- Strengthened behavioral insights through structured EDA, segmentation, and cohort tracking using R, Python, and Looker, helping teams prioritize high-impact customer journeys.
- Enabled ML-driven prioritization by supporting classification and forecasting analysis using machine learning, TensorFlow, and feature engineering, improving targeting for retention and operations use cases.
- Improved text-based insights by applying NLP, keyword/topic analysis, and SQL-based tagging on support/feedback data using MongoDB, NoSQL, and Python, highlighting drivers behind escalations.
- Accelerated stakeholder adoption by delivering clean, governed dashboards and automated refreshes using Power BI, Tableau, and AWS/Azure connectors, reducing manual reporting effort and improving self-serve analytics.

Data Analyst | CueTech Systems

Jan 2020 – Jul 2022

- Improved monthly reporting accuracy by redesigning core datasets and business rules using SQL, PostgreSQL, and data wrangling, reducing reconciliation churn and repeat corrections.
- Cut turnaround time for insights by automating recurring extracts and KPI packs using Python, R, and Excel, enabling faster weekly and monthly business reviews.
- Increased operational transparency by building interactive dashboards and drill-down reporting using Tableau, Power BI, and Looker-style KPI design, helping leaders track throughput and SLA performance.
- Reduced data preparation effort by establishing repeatable data cleaning routines and profiling checks using SQL, Python, and quality rule documentation for new sources.
- Strengthened experiment analysis by applying hypothesis testing, ANOVA, and regression in R/Python, enabling teams to compare process changes and quantify impact reliably.
- Expanded multi-source analytics by working with NoSQL/MongoDB, relational datasets, and log/event streams using SQL, Python, and EDA techniques to identify bottlenecks and anomalies.
- Supported cloud-ready reporting by integrating data workflows and storage patterns across AWS, Azure, and GCP exposure, improving portability and readiness for modern analytics stacks.

Education

Master's in Computer Science | Bradley University
