Ph No: (518)-577-0293

EDUCATION

Masters in Data Science (August 2023 – May 2025)

University at Albany, State University of New York, Albany **GPA: 3.87**

Bachelor of Technology in Electronics & Communication Engineering (August 2016 – September 2020)

CMR College of Engineering & Technology, Hyderabad, India

SUMMARY

- Business Intelligence Analyst with 5+ years of experience leveraging **advanced Excel**, SQL, Python, and Power BI to **analyze data at granular levels** and deliver actionable insights. Proven ability to work with **cross-functional teams** under tight deadlines, demonstrating a strong **sense of urgency** while managing **multiple priorities in fast-paced environments**.
- Experienced in **planning and forecasting**, KPI development, and performance analysis, with hands-on exposure to **retail and operational metrics** such as **customer margin, stock-in-trade, and week-of-supply-style capacity analysis**. Strong communicator with a track record of translating complex data into clear, executive-ready presentations.
- Experience using **Databricks** as a data source for Power BI reporting, validating migrated datasets, ensuring adherence to business rules, and resolving data inconsistencies through SQL-driven analysis.
- Industry exposure includes **Healthcare and Consumer-focused analytics**, with transferable experience applicable to **Beauty / Consumer Goods environments**.
- Strong background supporting enterprise BI and data warehouse teams, designing analytical models, documenting requirements, and building scalable reporting solutions.
- Expert in **DAX calculations, SSRS, data warehouse design, dimensional modeling, ETL pipelines, and performance optimization**. Strong track record supporting enterprise reporting strategies, building scalable dashboards, and improving decision-making across healthcare and public-sector environments.
- Highly experienced in **public sector data analytics** with New York State agencies, driving multi-team collaboration, inter-agency reporting, data governance, and secure analytics using Row-Level Security (RLS).
- Experienced working with Oracle Analytics, Azure, ETL pipelines, and enterprise data governance.
- Highly experienced Data Analyst working in the field. Leveraged business and technical acumen to develop strategies to automate and streamline processes, improving team data quality and accuracy by 90%. Trained colleagues on automation tools, Power BI and Tableau.
- Experienced in migrating Tableau to Power BI, building optimized data models, and developing Power Apps solutions that streamline workflows and enhance data-driven decision-making.
- Skilled in cross-functional collaboration, stakeholder engagement, and aligning analytics initiatives with organizational goals. Proficient in Power BI, Python, SQL, Power Apps and Power Automate, with a strong experience in healthcare-related reporting systems.
- Certified in **Microsoft Certified Power BI Data Analyst Associate, Azure Fundamentals, Azure Data Fundamentals** and **EMC Academic associate in data science and Big Data Analytics**.

- Collaborated with cross-functional teams to understand and fulfill data needs, resulting in a 95% customer satisfaction rate for data-related requests.
- Skilled in stakeholder collaboration, translating business needs into analytical solutions, and presenting complex findings to non-technical audiences.
- Worked as **Global Power BI Tech Lead** in a team and responsible for gathering the requirements from the clients and assigning to the team and ensured that all deliverables are met on time.
- Ability to handle multiple tasks and work independently as well as in a team.
- Adaptive to any type of work and zeal to learn new Technologies.

PROFESSIONAL EXPERIENCE

NYS Office of Mental Health
BI Analyst, Reporting, SQL Developer

May 2024 – Present
Albany, New York

The Office of Mental Health (OMH) operates psychiatric centers across the State. OMH also regulates, certifies, and oversees more than 4,500 programs, operated by local governments and nonprofit agencies.

Responsibilities:

- Led design and delivery of predictive models and Power BI dashboards forecasting patient intake trends, increasing proactive resource allocation by 20%.
- Migrated enterprise **Tableau** reports (TB Reporting, Flu Reporting, Immunization Reporting) to **Power BI**, improving performance, usability, and automation of scheduled refreshes.
- Designed and developed advanced **Power BI dashboards** including Medicaid/Medicare Supplemental Reports, Services Oversight Report, and MHARS Staff Inactivity Report using **dynamic DAX calculations** and optimized data models.
- Performed **granular-level analysis** (daily, weekly, employee-level, program-level) to identify trends, anomalies, and capacity gaps supporting operational planning.
- Built **forecasting models** in Power BI, Excel, and Python to support **resource planning and demand prediction**, improving planning accuracy by 20%.
- Leveraged **advanced Excel** (Pivot Tables, Power Pivot, scenario analysis) to validate datasets, reconcile metrics, and support ad-hoc executive requests.
- Partnered cross-functionally with Operations, Finance, and Program teams to prioritize deliverables and meet **aggressive timelines in high-pressure environments**.
- Translated complex analytical findings into **clear, business-focused presentations** for leadership and non-technical stakeholders.
- Designed **efficient star-schema data models**, implemented advanced **DAX measures**, calculated columns, and KPI definitions to support scalable analytics and actionable insights.
- Developed and optimized **Power Query (M)** transformations and automated **ETL workflows**, improving refresh reliability and reducing manual processing time.
- Ensured end-to-end **data accuracy and report performance** through query folding, model optimization, incremental refresh, and scheduled refresh configuration via On-Prem Gateway/Power BI Service.
- Built scalable data models and performed complex **data transformations in Power Query**, incorporating multiple data sources while improving dataset performance.
- Demonstrated strong analytical skills to identify trends, patterns, outliers, and anomalies in large datasets to support strategic and operational decisions.
- Proficient in data cleaning techniques, including handling missing values, removing duplicates, standardizing formats, and ensuring data consistency.

- Collected, cleaned, and organized raw data from multiple internal and external sources to improve reporting accuracy and reliability.
- Utilized **SQL** and **Excel** to manipulate, query, validate, and analyze data for reporting and business insights.
- Extracted, transformed, and validated large datasets using **Oracle SQL**, optimizing queries to support fast, accurate reporting.
- Developed end-to-end **ETL pipelines** and implemented star-schema-based data models for analytical reporting.
- Created and optimized **T-SQL stored procedures, functions, and views** to support BI dashboards, ETL pipelines, and analytical workloads.
- Utilized **T-SQL for performance tuning**, indexing strategies, and query optimization to ensure fast refreshes and scalable data models in Power BI.
- Published and managed datasets, workspaces, and permissions in **Power BI Service**, including implementation of **Row-Level Security (RLS)** for sensitive OMH program data.
- Supported agency-wide data governance through accuracy checks, QA testing, and documentation of data flows and security configurations.
- Built and enhanced **Power Apps solutions**, including Workplan Automation (sprint-hour submission system) and PPE Inventory Management, improving operational efficiency and reporting accuracy.
- Assisted with **SharePoint site migration**, enabling centralized document management and improved visibility for facility stakeholders.
- Collaborated with program managers, clinicians, and technical teams to gather reporting requirements and translate them into actionable dashboards and KPIs.
- Designed predictive models in **Python** and **Power BI** integrating salesforce and **SQL data** to forecast patient intake trends and resource needs, supporting proactive intervention strategies.
- Developed automated workflows using Power Automate to reduce manual form processing time by 40%, integrating SharePoint with real-time notifications.
- Using **Power BI and Tableau** created reports related to health care like Covid Exposure Report and Intake Status Report that tracks status changes of projects, providing real-time updates on project progress, approvals, and bottlenecks using Power BI and Power Automate for automation and visualization.
- Applied statistical methods, logical reasoning, and business rules to interpret data, solve problems, and drive process improvements.
- Translated analytical findings into clear, actionable recommendations for stakeholders, improving decision-making and operational efficiency. Ensured data quality and integrity across datasets by applying systematic validation and verification processes
- **Provided end-user training, documentation, and ongoing support** on reporting processes, KPIs, and metrics to ensure successful adoption of Power BI and Tableau dashboards; delivered **ad-hoc analysis** to support urgent decision-making needs.
- Automated form submission process using Power Automate to update SharePoint lists and send real-time notifications to managers upon form response submission.
- Developed and migrated **SharePoint** sites for Mid-Hudson, Pilgrim, and Capital District Psychiatric Centers, transitioning their intranet sites to SharePoint and managing user permissions.
- Worked closely with business users to collect requirements, analyze data, and convert business needs into technical specifications for **Power BI** solutions for reports like Medicaid and Medicare reports.
- Applied best practices in data visualization and dashboard design to guarantee clear, user-friendly, and accessible information.
- Led daily stand-ups and bi-weekly sprint reviews, coordinating tasks and ensuring on-time delivery of analytical solutions across teams.
- We have carried out comprehensive testing and validation of **Power BI** solutions to ensure they are accurate, reliable, and meet business requirements.
- We have provided training and support to end-users for effectively using Power BI reports and dashboards.

- Using Low code development, we have implemented the workflow solutions for application intake request, help desk intake request and work order request forms.
- Using **Python**, we have transformed the data and done the data validation for the clinical records in Excel.

ENVIRONMENT: Power BI, Tableau, Python, Power Automate, PowerApps SharePoint, Excel, SQL.

DXC Technology

August 2022 – June 2023

Client: AS&T

Hyderabad

Power BI Data Analyst, Power Automate Developer, Data Management, SQL

AS&T is Application Support and Testing team which is responsible for providing support for different applications based on customer satisfaction survey reports.

Responsibilities:

- Built an interactive NPS (Net Promoter Score) dashboard to analyze customer satisfaction and relationship metrics for AS&T clients, identifying trends across Functional Testing, Test Engineering, and other internal teams.
- Performed deep-dive analysis on Promoters, Detractors, and Passives, delivering monthly and quarterly trend insights that informed strategic improvement initiatives and enhanced overall NPS scores.
- Created Financial and resource management dashboards using **Power BI**.
- Utilized data visualization and trend analysis techniques to drive actionable insights and support customer experience enhancements across multiple service lines.
- Collaborated closely with business stakeholders to **gather requirements**, translate them into technical specifications, and deliver intuitive, insight-driven dashboards.
- Published, managed, and secured Power BI content using **Power BI Service**, including workspace management, **row-level security (RLS)**, permissions, and lifecycle governance.
- Performed detailed data validation using SQL and Excel to identify **data inconsistencies, defects**, and gaps between source and target datasets.
- Analyzed reporting logic and verified outputs against defined **business rules** to ensure alignment with stakeholder expectations.
- Investigated data issues to determine **root causes**, collaborating with data engineering and IT teams to drive timely resolution.
- Supported **planning and performance analysis** dashboards aligned with **retail-style metrics** such as utilization, throughput, and supply-demand balance, enabling leadership to monitor operational health.
- Conducted **performance tuning** using DAX Studio, Power BI Performance Analyzer, and SQL optimization techniques to eliminate bottlenecks and increase report responsiveness.
- Collected the Survey forms data from Microsoft forms responses and analyzed the data to design the dashboards which helps to take key decisions and to fix the applications thereby improving customer satisfaction.
- Managed the employees time tracking system, Attrition and Joiners data by using Power Automate.
- Automated the collection of data from Survey forms and updating it in the SharePoint using Power Automate flow. Deployed the dashboards to SharePoint and provided access to the clients.
- Prepare design documents and get it reviewed with the client.

ENVIRONMENT: Windows, Power BI, R, Power Automate, SharePoint, Microsoft Excel, Word, SQL.

DXC Technology

July 2020 – July 2022

Client: Zurich Insurance Group

Hyderabad

Power BI Data Analyst, RPA Developer, Tech Lead

Zurich Insurance is a global insurance group which provides different kinds of insurance to the customers. We will provide application-level support to the customers through Automation using RPA and we will help customers to take business decisions using **Power BI dashboards**.

Responsibilities:

- Lead the reporting team of Power BI developers on the projects.
- Understanding the business requirements and rules in the BI context and design data models to convert to meaningful insights.
- Creating Dashboards and visual interactive reports using **Power BI**.
- Extracted and manipulated complex datasets using advanced SQL queries (joins, CTEs, subqueries) to feed **Power BI** reports.
- Implemented **incremental refresh**, query folding, and model partitioning to significantly reduce refresh times and improve dataset scalability across production environments.
- Developed automated **Power BI Dataflows** and integrated them with SQL Server/Data Lake ingestion pipelines to centralize transformations and improve data governance.
- Created **custom M functions** in Power Query for reusable transformations, improving ETL efficiency and reducing maintenance across multiple reports.
- Built ETL pipelines for integrating Salesforce, SQL, and Excel data into enterprise data warehouses.
- Used **Databricks as a data source for Power BI** reports and dashboards, connecting via SQL endpoints to support enterprise reporting needs.
- Validated and analyzed Databricks-sourced datasets to ensure accuracy, completeness, and consistency before consumption in Power BI.
- Wrote and optimized **SQL queries against Databricks tables** to support reporting logic and ad hoc analysis.
- Verified report outputs against upstream Databricks data to ensure alignment with defined **business rules** and KPIs.
- Developed **Python** scripts for data cleansing, transformation, and automation tasks, reducing manual processing time by 30%.
- Designed and optimized **ETL pipelines** to extract, transform, and load data from multiple sources into data warehouses, ensuring high data quality and integrity for Power BI reporting.
- Utilized Python libraries (pandas, NumPy) for data validation, manipulation, and preparation prior to loading into analytical models and dashboards.
- Monitored and troubleshooted ETL job failures and data inconsistencies using Python scripting and SQL queries to ensure pipeline reliability.
- Created reusable **Python modules** for automating data extraction and preprocessing workflows as part of the ETL process.
- Developed **Python scripts** for data validation and automated preprocessing in alignment with SSDLC.
- Collecting the data from different data sources like web, **SQL databases and Excel Spreadsheets**.
- Analyzing data and presenting it through reports that can help in decision-making.
- Improvement of existing Dashboard design to ensure consistency and cohesiveness.
- Involved in the assessment of the requirement with SME and business analysts for feasibility study.
- Developed automated flows using Power Automate and Bot Scripts using RPA-UiPath.

ENVIRONMENT: Windows, Power BI, R, Python, RPA-UiPath, SharePoint, Microsoft Excel, Word, SQL, ETL.

Incline Inventions
Power BI Reporting, Excel, Word

Jun 2019 – Jun 2020
Hyderabad

Responsibilities:

- Supported the development of BI solutions by conducting complex data analysis, identifying trends, and generating actionable insights to inform product and business strategies.
- Integrated and cleaned data from multiple sources (usage logs, customer feedback, internal systems) to ensure data accuracy, consistency, and usability for reporting and forecasting.

- Created and maintained interactive dashboards and automated reports using **Power BI** and **Excel** to track KPIs, product performance, and operational metrics.
- Collaborated with cross-functional teams to define reporting specifications, translate business needs into technical requirements, and validate final deliverables.
- Contributed to data quality improvements by performing audits, documenting data definitions, and identifying opportunities for process automation and optimization.

ENVIRONMENT: Windows, Power BI, SharePoint, Microsoft Excel, Microsoft Word, SQL, Azure.

SKILLS

- Expertise in Data visualization tools **Power BI, Tableau, Zoho Analytics, QlikView, SSRS, SSIS.**
- Experience with data visualization libraries such as **Matplotlib, Seaborn, ggplot, NumPy, Pandas, Scikit learn.**
- **Advanced Excel** (Power Pivot, Pivot Tables, Lookups, Conditional Logic, Forecasting models).
- **Granular data analysis** (transaction-level, employee-level, time-series data).
- **Planning & Forecasting** (trend analysis, demand forecasting, capacity planning).
- Proficient in data analysis tools such as **Python, R, SQL, Apache Spark, Databricks.**
- Experienced in building end-to-end data pipelines using **Azure Data Factory, Azure Synapse Analytics, and Azure Data Lake** for scalable data integration and transformation.
- Experience in **Kimball Dimensional Modeling, ETL, Azure, Dataflows, Requirements Gathering, SDLC/SSDLC, Data Warehousing, Agile.**
- Skilled in developing Power BI dashboards connected to **Azure SQL Database, Azure Analysis Services, and Dataflows**, with secure access managed via **Azure Active Directory.**
- Familiarity with machine learning algorithms and **ETL Processes.**
- Excellent problem-solving and critical-thinking abilities.
- Ability to identify and track key performance indicators (KPI's).
- Used Predictive modelling techniques like Logistic regression, time-series forecasting, clustering (K-means), decision trees, random forests in Python for forecasting insights.
- Experience in classification and clustering techniques of Machine Learning.
- Experience working with patient records, clinical health data, and SharePoint-based health reporting systems.
- Knowledge of HIPAA guidelines and best practices in health data privacy and secure data sharing.
- Experience in creating dashboards using Power BI and handling security roles for users.
- Experience in continuous Build and Deployments of dashboards to multiple environments like Dev, QA, Performance and UAT.

Operating Systems	Windows, Linux
Version Control Tools	Git, GitHub
Monitoring Tools	Dynatrace
Databases	MS SQL, Oracle, MySQL, TSQL, Azure SQL Database
Programming Languages	C, Python, R
Scripting Language	Shell, PowerShell
Cloud Platforms	Azure, AWS
Technology/Functional Area	Power BI, Tableau, RPA-UiPath, Power Automate, Power Apps
Software Methodologies	Agile, Waterfall
