

Nikhil Chowdary Annamareddy | Business Data Analyst

Illinois, USA | +1 (312) 934-7828 | nikhilchowdary1299@gmail.com | [LinkedIn](#)

SUMMARY

- Highly skilled Business Data Analyst with 4+ years of experience transforming complex data into actionable insights to support strategic decision-making and improve operational efficiency. Proficient in diverse programming languages, database systems, analytical frameworks, and visualization tools, delivering a comprehensive approach to data analysis and interpretation.
- Skilled in SQL, Python, Power BI, Tableau, Snowflake, PySpark, and AWS for designing KPI dashboards, analytical data models, and automated reporting workflows.
- Strong experience in credit-risk metrics, claims analytics, member utilization insights, forecasting models, ETL optimization, and multi-source data quality validation.
- Adept at translating business requirements into analytical solutions that improve decision accuracy, operational efficiency, regulatory reporting readiness, and audit compliance.
- Proven track record of improving reporting accuracy, reducing processing delays, enhancing data governance, and enabling data-driven decision-making across diverse business units.
- Experienced collaborating with cross-functional stakeholders, documenting business rules, and supporting Agile analytics initiatives across healthcare, financial, and insurance environments.

TECHNICAL SKILLS

Programming & Analytics	SQL (CTEs, Window Functions), Python (Pandas, NumPy, Scikit-learn), PySpark, StatsModels
BI & Visualization	Power BI, Tableau, KPI Dashboards, Data Storytelling, DAX, Data Visualization Best Practices
Data Warehousing	Snowflake, Redshift, SQL Server, PostgreSQL, MySQL
ETL & Data Engineering	AWS Glue, Airflow, Lambda, S3 Pipelines, Databricks, dbt (Basics), Data Pipelines, Data Modeling
Big Data & Processing	PySpark, Databricks, AWS EMR, Distributed Computing
Cloud Platforms	AWS (S3, Glue, Lambda, Redshift, IAM), Snowflake Cloud Ecosystem
Analytics & Modeling	Forecasting, Statistical Modeling, Segmentation, Trend Analysis, A/B Testing, Data Profiling
Business & Compliance Domains	Credit Risk, Lending KPIs, Claims Analytics, Loss Ratios, Healthcare Utilization, Provider Data Quality, Regulatory Reporting
Tools & DevOps	Git, GitHub, Docker, Jupyter, VS Code, Jira, Confluence
Methodologies	Agile Scrum, SDLC, Data Governance, Documentation Standards

EXPERIENCE

Citi group, USA

Senior business data analyst

Jun 2025 - Present

- Designed unified SQL models integrating multi-source credit datasets, improving daily risk reporting speed by 28% and enabling clearer visibility for decision-makers across lending operations while strengthening consistency of downstream analytical outputs.
- Automated Tableau reporting pipelines using Python scheduling routines, eliminating 12+ hours weekly manual preparation and raising dashboard data accuracy from 92% to 99.7% during regulatory reporting reviews across multiple business units.
- Constructed Snowflake validation scripts detecting inconsistent financial entries, reducing data discrepancies by 41% and improving timeliness of downstream analytics while helping compliance teams verify sensitive credit data more reliably.
- Built KPI frameworks for portfolio risk monitoring, supporting leadership with structured indicators that increased adoption of standardized reporting by 35% and improved alignment across credit, collections, and operational strategy teams.
- Partnered with stakeholders to capture analytics requirements and translate them into Databricks workflows, accelerating delivery timelines by 22% while ensuring alignment with evolving credit policies and risk-management expectations across departments.
- Refined audit documentation processes, lowering review-cycle delays by 18% through comprehensive tracking of transformations, lineage, and business logic definitions within Snowflake-based reporting systems supporting regulatory assessments.

UnitedHealth Group, USA

Data analyst

Jun 2024 - May 2025

- Examined healthcare utilization datasets using Python and SQL, uncovering recurring claim-pattern shifts that helped managers refine authorization workflows, reducing unnecessary processing delays 17% and improving member service timelines across multiple regions.
- Developed Power BI dashboards integrating eligibility, claims, and provider data, delivering weekly insights increasing reporting visibility 34% and enabling leadership to identify operational bottlenecks earlier during quarterly review cycles.
- Coordinated data-quality assessments across Snowflake pipelines, detecting inconsistent provider identifiers and reducing downstream reconciliation efforts 28%, strengthening reliability of reporting submitted to compliance and network operations teams.

- Produced forecasting models estimating claim-volume fluctuations using Python time-series methods, supporting capacity-planning decisions that helped regional teams reduce staffing mismatches 15% during peak operational periods.
- Created KPI scorecards tracking cost-per-claim, denial ratios, and turnaround times, enabling executives to monitor performance trends and implement process adjustments improving operational efficiency 21% within three quarters.
- Documented business rules, data lineage, and reporting logic for eligibility transformation workflows, improving cross-team clarity and reducing analyst onboarding time 33% across distributed analytics and product departments.

Adons softech pvt ltd, India

Aug 2022 - Aug 2023

Data analyst

- Developed PySpark ETL pipelines processing insurance claims records, reducing daily runtime by 27% and ensuring timely availability of refreshed datasets used by Liberty Mutual analytics and operational reporting teams.
- Created Tableau dashboards visualizing claim-cycle durations, operational bottlenecks, and approval trends, helping managers reduce processing delays by 14% and enhancing overall visibility into daily claim-handling performance.
- Implemented SQL quality checks across policy datasets, decreasing invalid entries by 38% and improving reliability of automated reporting workflows relied upon by business stakeholders for weekly performance evaluation.
- Conducted forecasting analysis for DaVita treatment metrics, enabling earlier detection of patient-volume surges and supporting resource allocation decisions that improved operational responsiveness by 19% across clinical teams.
- Introduced automated Excel-based performance trackers consolidating KPIs into accessible formats reducing manual compilation time by 10 hours weekly for operational reporting activities.
- Coordinated with product and engineering groups to refine requirement documentation, improving downstream development clarity and reducing rework cycles by 21% across analytics and dashboard enhancement initiatives.

Sage softech pvt ltd, India

Jan 2021- Jul 2022

Business analyst

- Built AWS Glue ETL workflows transferring healthcare datasets into Snowflake, decreasing processing time by 32% and strengthening data readiness for reporting teams managing patient-care insights across regulated environments.
- Designed Power BI dashboards outlining claim activity and patient engagement, providing leadership clearer visibility that increased adoption of data-driven decisions by 29% across clinical and administrative groups.
- Developed fraud-risk indicators using Python statistical methods, identifying irregular claim patterns preventing projected annual losses exceeding \$450K for client operations handling sensitive healthcare processes.
- Standardized data-governance rules for healthcare sources, removing inconsistencies and supporting improved downstream reporting accuracy by 26% across multiple analysis and compliance workflows.
- Assisted SQL Server to Snowflake migration efforts, optimizing queries improving response times by 37% and enabling smoother reporting refresh cycles for operational and analytics teams.
- Produced variance analyses tracking operational inefficiencies, helping managers identify recurring gaps and implementing adjustments measurably improving turnaround times for critical reporting processes.

PROJECTS

Real-Time Credit Risk Monitoring

- Built ETL pipelines in Snowflake and Databricks; automated dashboards reduced credit-risk decision time by 30% and improved visibility for financial leaders.

Claims Fraud Detection Analytics

- Developed ML-based detection indicators; automated reporting improved audit readiness and supported annual savings exceeding \$500K.

Healthcare Operations KPI Suite

- Designed 50+ KPIs across treatment, claims, and operations; dashboards improved data accessibility and strengthened monthly review cycles.

EDUCATION & CERTIFICATIONS

Master's in Computer Science

Illinois Institute of Technology, USA

B.Tech, Computer Science & Engineering

BML Munjal University, India

- **AWS Certified Data Engineer – Associate**
- **AWS Solutions Architect – Associate**
- **SnowPro Core – Snowflake**
- **Generative AI – Databricks**
