SUMMARY:

- Automated BI & Data Analyst with 6+ years of experience in healthcare and supply chain analytics, reporting, and process automation.
- Proficient in SQL, Power BI, Tableau, and Python for building dashboards and turning raw data into business insights.
- Designed and deployed ETL pipelines using Azure Data Factory, SSIS, and Databricks, enabling high-volume, cloud-native data processing.
- Automated data validation and cleansing processes, improving data quality and reducing manual errors by 95%.
- Built KPI dashboards and executive scorecards in Power BI to enable real-time performance and risk monitoring.
- Skilled in Snowflake, Azure SQL, and AWS for scalable data management and cross-platform integration.
- Effective communicator with experience in requirement gathering, cross-functional collaboration, and user training.
- Experienced in the Software Development Life Cycle (SDLC) for BI solutions—from development to deployment and support.
- Agile team player with a strong focus on data governance, continuous improvement, and aligning analytics with business goals.
- Worked on the Power BI reports & dashboards with data sources like SQL Server, Access DB, Excel, Txt/CSV etc.
- Used Table, Matrix, Bar, Card, Gauge, Slicer's visualizations
- Worked on Custom Visualizations like multi slicer, Sync Slicer and Hierarchy slicer.
- Worked on DAX expressions like filters, Aggregate, Mathematical Functions etc.
- Created New Calculated Column and Measure using DAX Expression.
- Worked with filters, calculated columns, measures, relationships and transformations of Edit Query section.
- Published .pbix file to Cloud services [Azure] and shared reports to internal team members and end users.
- Worked on On-Premises Gateway to refresh the data sources to keep the dashboards and reports up to date.
- Implemented Role Based Security as part of security in Power BI.
- Generated the IBM Cognos report views using Device Statistics and Green Office IBM solutions.
- Basic knowledge in creating the reports and dashboards in Tableau.

SKILLS:

Data Analysis & Visualization: Power BI, Tableau, SSRS, SQL Profiler, QuickSight

Database: SQL Server (2019/2017/2016), Snowflake, Azure SQL, Oracle

ETL & Data Warehousing: SSIS, Azure Data Factory, AWS Redshift, Snowflake

Programming: SQL, Python, T-SQL, DAX

Cloud Technologies: Azure Data Lake, AWS S3, EC2, Microsoft Azure

Business Intelligence & Power BI, QlikView, SSAS, Power Query

Reporting:

Methodologies: Agile, Waterfall, SDLC, Data Governance

Data Modelling: Star & Snowflake Schema, ER Diagrams, Normalization

Data Governance: Data Lineage, Metadata Management, Data Catalogs, MDM, Azure Purview

EDUCATION:

- Bachelor's- Anurag Group of Institutions, Computer Science (2014-2018)
- Master's – Western Illinois University, Computer Science (2022-2024)

EXPERIENCE:

Client: Emerson, St. Louis, MO

Mar 2023 – Present

Role: Data Analyst

- Conduct root cause analysis on inventory issues and order delays, leading to a 15% improvement in cycle time.
- Automate data validation and cleansing workflows using Python, increasing data accuracy and reducing inconsistencies.
- Extract and transform supply chain data from SQL Server, Azure SQL, and AWS S3 for daily analytics reporting. Build Power BI and Tableau dashboards to track KPIs for logistics, vendor performance, and forecast accuracy.
- Develop advanced DAX calculations to track forecast accuracy, delivery trends, and inventory turnover in real time.
- Optimize SQL queries, stored procedures, and triggers to improve report generation speed and database efficiency.
- Manage ETL pipelines using SSIS, Azure Data Factory, and PySpark to deliver clean, reliable data to business units.
- Design custom visuals in Power BI (Bullet Charts, KPI indicators, Advanced Maps) to improve executive reporting.
- Integrate SharePoint using Power Automate flows to streamline approval processes and trigger real-time alerts.
- Implement indexing strategies on large datasets to boost query performance for logistics reporting.
- Collaborate with supply chain, IT, and finance teams to gather reporting needs and deliver tailored solutions.
- Apply data governance best practices to ensure accuracy, security, and compliance in data handling and reporting.
- Conducted data profiling, validation, and cleansing to eliminate inconsistencies and ensure data quality across systems.
- Integrated Power BI and Tableau dashboards with multiple data sources to centralize reporting across teams.
- Built automated alerts and embedded KRI thresholds into reports to flag performance and compliance risks.
- Hosted and maintained Azure-hosted SQL Server instances, ensuring high availability and secure cloud-based data access.
- Wrote and optimized T-SQL queries, views, and stored procedures to extract insights from MySQL, PostgreSQL, and Oracle databases, improving query performance by 30%.
- Contributed to Agile sprints, helping reduce project turnaround time by 30% through improved team coordination. Designed SSRS reports and dashboard views to deliver operational and risk analytics for leadership.

Client: Xchain Technologies Hyderabad, India

June 2018 – Jul 2022

Role: BI | Data Analyst

- Investigated trends in insurance claim denials by analyzing patient records, billing data, and coding errors, leading to a 30% drop in rejected claims.
- Designed and implemented cloud-based ETL workflows using Azure Data Factory, SSIS, and Databricks, streamlining data integration from EHR and payer systems.
- Developed automated T-SQL validation layers to identify incomplete, duplicated, or mismatched fields in claims, improving approval accuracy and billing compliance.
- Applied Python (Pandas, NumPy) to clean and transform semi-structured clinical data, reducing manual review time and enhancing audit readiness.

- Created dashboards in Power BI and Tableau to track denial rates, aging claims, and reimbursement trends across payers.
- Built advanced DAX calculations to measure claim cycle efficiency, escalation patterns, and revenue recovery KPIs.
- Delivered SSRS reports to compliance and finance teams to support audits, HIPAA reporting, and revenue analysis.
- Modeled healthcare datasets using Star and Snowflake schemas, enabling high-performance OLAP reporting for leadership.
- Designed and maintained a centralized data warehouse integrating claims, billing, and clinical data to support scalable analytics and unified reporting across departments.
- Optimized Snowflake SQL queries to accelerate data loads and enable near real-time insights for claims and patient ops.
- Collaborated closely with clinical SMEs, billing teams, and IT to improve CRM-linked data quality and reporting workflows.
- Applied data governance and quality rules to maintain consistency and ensure compliance in reporting workflows.
- Participated in Agile sprints, delivering data solutions iteratively and reducing dashboard turnaround times by 25%.
- Collaborated with business users to gather reporting needs and translate them into scalable data models and report designs.
- Developed and automated ETL workflows using SQL Server Integration Services (SSIS) to support timely data extraction, transformation, and loading.
- Performed regular database backups, maintenance plans, and disaster recovery testing to support business continuity.
- Applied performance tuning on long-running SQL jobs and complex procedures, significantly improving load times.
- Participated in Agile sprints, contributing to backlog grooming, sprint planning, and report development cycles.
- Defined KPI metrics in collaboration with business stakeholders and delivered custom reports aligned to business goals.
- Reduced anomalies by 95% through proactive validation logic and deep-dive root cause analysis, improving reporting reliability.
