Professional Summary

Analytical and forward-thinking **Data & Business Systems Analyst** with 4+ years of experience in data analytics, process automation, and AI-driven solutions across healthcare and enterprise systems. Proven ability to bridge business and technical teams by designing scalable data pipelines, developing predictive models, and implementing Generative AI automation to optimize workflows and enhance decision-making. I am skilled in **Python, SQL, Snowflake, Databricks, AWS, Power BI, and TensorFlow**, with hands-on experience building end-to-end analytics solutions from data ingestion to visualization and insight delivery.

Technical Skills

Programming: Python (Pandas, NumPy, PySpark, Scikit-learn, TensorFlow), R, SQL (MySQL, PostgreSQL, Snowflake), Bash

Big Data & ETL: Apache Spark, Databricks, AWS Glue, Airflow, ETL Workflow Automation

Data Warehousing: Snowflake, Redshift, Schema Design, Data Modeling, Query Optimization

Machine Learning / AI: Regression, Classification, NLP, ARIMA, XGBoost, LangChain, OpenAI API, Hugging Face

Data Visualization: Power BI, Tableau, Matplotlib, Seaborn, DAX, Jupyter Notebook

Cloud Platforms: AWS (EC2, S3, Glue, Lambda), Azure OpenAI

DevOps & Tools: Git, Jenkins, Docker, Jira, Confluence, ServiceNow

Business Skills: Requirements Gathering, Data Governance, Stakeholder Management, Agile/Scrum

Professional Experience

Senior Data & Business Systems Analyst | Evernorth Health Services

Morris Plains, NJ | Aug 2024 – Present

Lead healthcare data analytics and digital transformation initiatives, combining business analysis, data engineering, and AI model development to optimize processes and improve decision-making.

Responsibilities:

- Designed and deployed **data pipelines using Python, SQL, AWS Glue, and Snowflake** for claims, pharmacy, and EHR data integration.
- Developed **predictive and Generative AI models** using TensorFlow, Scikit-learn, and OpenAI APIs for forecasting patient utilization, anomaly detection, and documentation automation.
- Built **interactive dashboards in Power BI and Tableau**, visualizing clinical KPIs and financial trends across departments.
- Partnered with stakeholders to translate requirements into automated data workflows and self-service analytics solutions.
- Conducted QA testing for data integrations and ML pipelines using **PyTest, SQL assertions, and Git version control**.
- Integrated **LLM-based assistants** using Lang Chain and Azure OpenAI to automate SQL generation, data summarization, and report generation.

Key Achievements:

- Reduced data load and processing time by **40%** through ETL optimization and catching strategies.
- Developed a **GenAI-based report summarizer**, saving 25+ manual hours per week for healthcare analysts.

- Built an ML-driven **patient risk prediction model**, improving early identification accuracy by **22%**.
- Created **enterprise KPI dashboards** covering 5+ departments, increasing operational transparency and performance tracking.
- Automated validation tests, reducing manual QA cycles by **35% per sprint**.

Project Highlights:

- **Healthcare Claims Optimization:** Built ML-based anomaly detection models in Databricks to flag duplicate or high-cost claims; reduced review cycle time by 30%.
- **Pharmacy Benefit Integration:** Automated ingestion of 2M+ records via AWS Glue; implemented LLM-assisted data quality checks with LangChain and GPT-4.
- **EHR Workflow Automation:** Deployed NLP pipelines using SpaCy and Hugging Face Transformers to extract structured data from physician notes, improving documentation efficiency by 45%.

Data Analyst | Cognizant

Bangalore, INDIA | Jun 2020 – Aug 2023

Executed complex analytics projects supporting data integration, modeling, and visualization for global clients in healthcare and finance.

- Designed and optimized **PL/SQL stored procedures, triggers, and materialized views** to improve report performance.
- Built and validated ETL data flows for operational analytics, ensuring integrity across multiple systems.
- Created **Tableau dashboards** and published them on Tableau Server for business users and leadership.
- Developed logistic regression and clustering models in **Python and R** to predict customer churn and behavior patterns.
- Automated data cleansing and transformation using **Pandas and NumPy**, reducing manual handling time by 60%.

Key Achievements:

- Implemented a churn prediction model with **85% accuracy**, improving retention strategy efficiency by 20%.
- Automated recurring reports, saving **40+ analyst hours per month**.
- Led migration to Snowflake data warehouse, reducing query time by 50%.

Education

Master of Science in Computer Science: Campbellsville University, Kentucky, USA 2024 Jan – 2025 Aug | CGPA: 3.89 / 4.0

Bachelor of Technology in Computer Science GITAM University, India 2018 – 2022 | CGPA: 6.75 / 10

Certifications

- **Databricks Certified Data Engineer Associate**
- **AWS Certified Data Analytics – Specialty**
- **Google Data Analytics Professional Certificate**
- **Generative AI with Lang Chain & OpenAI (Coursera)**
- **Power BI for Business Analytics – Coursera**
- **SQL for Data Analysis – Coursera**
- **Python for Everybody – Coursera**
- **Web Development – Coursera**

- ***Processing Data with Python – Coursera***

Core Competencies

Data Analytics | Machine Learning | Generative AI | ETL Development | Healthcare Analytics | Predictive Modeling | Cloud Data Engineering | Data Visualization | Automation Frameworks | Agile/SDLC
