

Sai Prashanth Reddy Marketing Data Analyst MA 508-233-8356 saiprashanth@itjobinbox.com	
SUMMARY	Marketing Data Analyst with 6+ years of experience building measurement frameworks, forecasting models, and automated analytics pipelines across finance, consulting, and tech. Expert in Python, R, SQL, MMM, multi-touch attribution, incrementality testing, channel optimization, and time-series forecasting. Strong track record of improving ROAS, reducing acquisition costs, and strengthening full-funnel visibility using tools like GA4, Adobe Analytics, Power BI, Tableau, Salesforce, and Snowflake. Adept at integrating multi-channel data, running geo-split and A/B tests, and delivering dashboards that influence budget decisions and campaign strategy. Known for cutting through messy data, challenging assumptions with hard numbers, and driving measurable marketing impact end-to-end.
SKILLS	Programming & Data Analysis: Python (Pandas, NumPy, scikit-learn, PyMC, cvxpy, Prophet, ARIMA, Plotly, Streamlit), R (R Studio, Markov Chains, Shapley), SQL, Excel (PivotTables, VLOOKUP) Marketing Analytics: Marketing Mix Modeling, Multi-touch Attribution, Forecasting & Time Series, Incrementality & Geo-split Testing, ROI Optimization, Customer Segmentation, Funnel Analysis Visualization & Reporting: Tableau, Power BI, Google Data Studio, Streamlit, Plotly, Automated Dashboards Digital Marketing Tools: Google Analytics (UA, GA4, Firebase), Adobe Analytics, Google Tag Manager, Microsoft Clarity, Shopify, Sprinklr, SEO/SEM, PPC, Social Media Analytics (Meta, LinkedIn), Mailchimp, A/B Testing CRM & Automation: Salesforce, HubSpot, Marketo Other Tools: Snowflake, Figma, Adobe Creative Suite, Canva, MS Office Suite Methodologies: Agile, SDLC, Waterfall
EXPERIENCE	JPMorgan Chase & Co., MA Jan 2024 – Current Marketing Data Analyst - Built end-to-end MMM models using Python (scikit-learn, PyMC) to quantify channel elasticity for credit-card acquisition, reducing media waste by 12% while increasing incremental approvals. - Designed multi-touch attribution pipelines using SQL + Python to integrate web, app, and CRM data from GA4, Adobe Analytics, and internal systems, cutting attribution lag from 14 days to 48 hours. - Automated weekly performance dashboards in Tableau and Power BI covering spend, ROAS, CPA, and funnel KPIs for leadership, eliminating 20+ hours/week of manual reporting. - Applied Prophet and ARIMA forecasting to predict application volume and funding trends across owned and paid channels, improving forecast accuracy by 30%. - Executed incrementality & geo-split tests for paid search and paid social, revealing true lift vs. cannibalization, directly informing budget reallocation across markets. - Partnered with compliance, risk, and product teams to operationalize data-quality checks, feature governance, and SDLC-based deployment, preventing downstream errors in marketing models. Quantum Integrators, MA July 2022 – Dec 2023 Marketing Analyst - Delivered full-funnel marketing analytics for client portfolios by merging CRM, web, ad-platform, and sales data using SQL + Python, creating a unified customer view adopted by 5+ clients. - Built marketing mix models and time-series forecasts to help clients allocate budgets across Google Ads, Meta, email, and affiliate channels, boosting overall ROI by 15–25% per engagement. - Developed automated dashboards in Tableau, Power BI, and Google Data Studio to track spend, CAC, LTV, churn, and attribution metrics, reducing reporting effort by 70%. - Implemented A/B and multivariate testing frameworks using GA4, GTM, and client CDPs, identifying high-impact creative and landing-page variants that improved conversion rates by up to 18%. - Conducted SEO/SEM audits and optimization projects using keyword analysis, funnel diagnostics, and competitive insights, improving search visibility and lowering CPL for multiple clients. - Led customer segmentation using clustering and propensity modeling (Python + scikit-learn), enabling targeted campaigns that increased email engagement by 30%. Infinite Infolab, India Jan 2019 – Aug 2021 Data Analyst - Built ETL pipelines in Python + SQL to clean, standardize, and integrate large client datasets (sales, digital, CRM), cutting data prep time by 40%. - Developed automated Excel & Tableau dashboards for KPIs such as revenue, retention, churn, and campaign performance, replacing manual reporting across multiple teams. - Conducted exploratory data analysis using Pandas, NumPy, and visualization libraries to uncover performance gaps, operational bottlenecks, and customer-behavior patterns for client projects. - Implemented predictive models (classification and regression) using scikit-learn to forecast demand and lead quality, improving client decision accuracy by 20–30%. - Designed SQL-based data quality checks to validate incoming datasets, reducing reporting errors and rework cycles for recurring analytics deliverables. - Created segmentation and cohort analyses for clients to evaluate user behavior, conversion trends, and retention drivers, directly informing targeted marketing strategies. - Collaborated with cross-functional teams (developers, QA, business analysts) to translate business requirements into analytic specs, dashboards, and data deliverables under Agile workflows.
EDUCATION	Master of Science in Data Analytics Engineering Northeastern University, Boston, MA May 2023 Bachelor of Technology in Computer Science Engineering GITAM University, Hyderabad, India Apr 2019
