Work Authorization – H4-EAD (Valid till – 03/26/2029)

EDUCATION

SDM Post Graduate Centre, Ujire

Nov 2021 – Sep 2023

M.Sc - Statistics - CGPA - 8.03

Ujire, Karnataka

SDM Degree College, Ujire

Jun 2018 – Oct 2021

B.Sc - Statistics, Mathematics, Computer Science - Percentage - 82%

Ujire, Karnataka

SKILLS

Functional Areas: Data Analysis, Statistical Analysis, Data Visualization, Machine Learning, Regression, Statistics Modelling, Digital Marketing, Marketing Analytics

Languages: Python, SQL, MS Excel, Power BI

Soft Skill: Analytical Thinking, Communication, Problem Solving, Critical Thinking

WORK EXPERIENCE

Ipsos Group - Analyst, Bengaluru(*Onsite*)

July 2024 – Dec 2024

- Analyzed the impact of digital marketing channels, including paid search, social media, Meta, TikTok, OLV and programmatic advertising, and transformed into actionable, clear insight.
- Conducted detailed statistical analysis to support clients in evaluating key performance indicators, including campaign effectiveness, brand performance and customer journey insights. This approach allowed the client to gain a holistic view of the impact of the brand across media channels.
- Derived result at both high level and detailed granular level using regression modelling(Multiple linear regression and ridge regression).
- Used Advanced Excel(Function like: loopups,sumifs,pivot table index match etc) and SQL for data analysis

PROJECTS

Website Optimization Through Traffic And Conversion Analysis [↗](#) |

SQL, PowerBI

AUG 2025-OCT 2025

- Analyzed website session data to identify top traffic sources and observed a 2.8% **conversion rate**, which was below the 4% target; conducted an in-depth analysis before optimizing bids on non-brand gsearch. .
- Analyzed website performance to identify high **bounce rates** and introduced a new custom landing page; conducted **A/B testing** to compare results, which showed a lower bounce rate on the custom page.
- Created and analyzed a **conversion funnel** to track customer activity at each stage, helping reduce bounce rates and improve overall conversion rates.

Life Expectancy Using Linear Regression [↗](#) | Linear Regression Analysis

2024

- Directed data cleaning and **feature selection using Backward Elimination** to identify important features for the linear regression model.
- Verified the assumptions of the linear regression model and applied function transformation for normality. Utilized **ridge regression** to overcome problems of high multicollinearity among variables, resulting in a 2% increase in model performance.

Credit Score Classification: Unveiling patterns through machine learning. [↗](#) |

Python, Machine Learning, Statistical Analysis

2023

- Analyzed extensive datasets using advanced statistical techniques, identifying critical correlations between key features and response variables.
- Utilized various statistical tests and graphical techniques using Seaborn and Matplotlib to gain insights into the dataset, which helped in selecting important features and increased the model's performance by 8%.
- Classified credit scores based on transactional activities to inform decisions on offering mortgages, credit cards, or other services using a **machine learning model**

CERTIFICATIONS

- Website traffic Analysis of E-commerce using SQL
- The Data analytics using python by Coursera.
- Hacker Rank SQL (Advanced) Test certified
- Power BI for Beginners by Simplilearn
