

# Rohith Gopalakrishnan

## Data Analyst

Location: Houston, TX | Email id: Rohithgopalakrishnan01@gmail.com | Phone no: +1 469 579 0925 | [Linkedin](#)

### SUMMARY

- Data Analyst with 4+ years of experience supporting risk, finance, operations, and analytics teams across banking, higher education, and client-facing environments, with a strong focus on data accuracy, governance, and decision support.
- Proven ability to analyze, validate, and govern complex models and datasets, including enterprise risk, forecasting, and operational analytics, helping reduce errors, improve transparency, and strengthen audit readiness.
- Hands-on expertise in SQL, Python, Excel, Power BI, and Tableau, using automation and advanced analytics to streamline reporting, cut manual effort by up to 25–50%, and improve data reliability across multiple stakeholders.
- Strong background in model and data validation, including stress testing, back-testing, reconciliation, and quality checks, contributing to measurable outcomes such as 15% lower model error rates and 30% fewer data disputes.
- Experienced in dashboard design and executive reporting, translating complex data into clear insights that support leadership decisions around risk exposure, operational efficiency, and resource planning.
- Effective collaborator who works closely with risk teams, auditors, data scientists, operations leaders, and clients, ensuring analytics solutions align with business needs, governance standards, and real-world usage.
- Known for building well-documented, scalable analytics frameworks that improve team efficiency, support onboarding, and ensure continuity across reporting and validation processes.

### PROFESSIONAL EXPERIENCE

#### Cadence Bank

##### Risk Business Analyst

May 2024 - Present

- Led end-to-end lifecycle reviews for 27 enterprise risk and analytics models developed in R, SQL Server, and Excel, applying structured validation and governance controls that reduced model error rates by 15% and improved overall model integrity.
- Performed comprehensive stress testing, back-testing, sensitivity analysis, and override reviews across credit, HR, treasury, and mortgage models, enabling earlier risk identification and strengthening mitigation strategies.
- Audited and standardized controls for 100+ End User Computing (EUC) tools, reducing operational risk exposure and improving transparency through a consistent governance framework.
- Designed and implemented a centralized model inventory and documentation repository, consolidating assumptions, remediation plans, and contingency actions, which improved team efficiency by 25% and simplified audit readiness.
- Developed SQL and Python scripts to extract, reconcile, and validate model inputs and outputs, ensuring traceability of logic, accuracy of results, and compliance with enterprise risk management standards.
- Reviewed and validated AI/ML-driven risk models, assessing feature selection, training logic, performance metrics, and stability to reduce bias and ensure consistent predictive behaviour.
- Partnered with data science teams to monitor model drift and performance degradation, supporting timely recalibration of machine learning models used in risk and decisioning processes.
- Supported governance and explain ability for AI/ML models by documenting assumptions, limitations, and control measures, aligning advanced analytics with regulatory and internal model risk expectations.
- Introduced automation and AI-assisted validation techniques for recurring testing and reconciliation activities, reducing manual effort while improving consistency and repeatability of reviews.
- Collaborated with internal audit, IT, and model owners to map model lifecycle workflows, define validation checkpoints, and document processes in Visio, ensuring alignment with enterprise risk frameworks.
- Delivered executive-ready reporting summarizing validation outcomes, key risk exposures, and remediation priorities, enabling leadership to focus on high-impact models and areas of concern.

#### Byte wave Technovations (Internship)

##### Data Analyst

Mar 2024 – April 2024

- Worked with cross-functional teams to understand client reporting challenges and built interactive Tableau dashboards that replaced static Excel reports. This change alone cut manual processing time by about 20% and gave clients clearer, faster access to key performance data.
- Automated data collection and transformation processes using Python and SQL, making daily data refreshes faster and more reliable. The automation reduced loading time by nearly half and helped maintain a consistent 20% boost in accuracy across multiple client accounts.
- Designed Excel and Power BI solutions that turned raw client data into quick insights. The automation features saved the analytics team over 10 hours every week, freeing them up to focus on deeper analysis instead of repetitive report preparation.
- Collaborated directly with project managers and client stakeholders to define what metrics actually mattered for each engagement—whether that was operational efficiency, turnaround time, or financial KPIs—and customized the dashboards accordingly.
- Troubleshoot recurring data quality issues by auditing SQL queries and cleansing messy source files before they hit the reporting layer. These quality checks improved trust in the numbers and reduced back-and-forth clarification emails from clients.
- Documented every reporting flow—from raw data extraction to final dashboards—in Confluence and SharePoint, so that both the internal team and new hires could easily understand and maintain the systems.
- Took ownership of presenting data findings during weekly client syncs, walking teams through the dashboards and showing how small process tweaks could yield measurable gains in performance and reporting efficiency.

#### UT Dallas Dine-In Services (Internship)

##### Data Analyst

July 2022 – Dec 2023

- Worked closely with the dining operations and procurement teams to make sense of messy sales and inventory data. Using SQL and R, built a forecasting model that helped predict meal demand more accurately and cut down inventory mismatch by 18%.
- Designed automated Excel and Python scripts that handled daily reporting and data refreshes, freeing up more than 10 hours each week for strategic analysis and reducing stock overages by roughly 15%.
- Built Power BI dashboards that turned raw numbers from the dining halls into clear visuals—tracking food waste, supply usage, and student demand in real time. The new insights helped management make faster, data-backed adjustments to ordering cycles.
- Took the lead on mapping how data moved between POS systems, campus cards, and supplier files. Documented these workflows in Visio to pinpoint inefficiencies and collaborated with IT to plug the gaps.
- Wrote validation queries in SQL and lightweight scripts in Python to cross-check reports from multiple sources. This step alone improved data reliability and reduced end-of-month reconciliation errors across all dining locations.
- Helped standardize data reporting templates across departments using Excel Power Query, ensuring everyone—from kitchen leads to finance—was working with the same set of clean, updated data.
- Pulled everything together into executive summaries and visual decks that highlighted key findings—forecast accuracy, inventory waste reduction, and purchasing efficiency—giving leadership clear visibility into the impact of the new analytics framework.

Faithful Auto (Internship)

Data Analyst

May 2020 – Nov 2021

- Partnered with service, diagnostics, and parts departments to gather business requirements for reporting and analytics, then translated them into functional specifications and user stories via Confluence and Jira.
- Standardized data formats across sales, service, and inventory units using Excel Power Query and Python scripts, cutting monthly report-generation time by 30% while improving data consistency and transparency.
- Automated the extraction, transformation, and loading of vehicle service and parts data using Python (Pandas, NumPy) and SQL, reducing data-loading time by 50% and improving downstream data accuracy by 20%.
- Built interactive dashboards in Power BI and Tableau that visualized key service-centre metrics—such as repair turnaround time, parts inventory levels, and customer service trends—enhancing insight visibility for leadership by 25%.
- Conducted root-cause analytics on service-level issues and recurring repairs by querying and reconciling diagnostics and billing data, which led to a 15% reduction in repeat repair rate and improved customer satisfaction.
- Collaborated with service-technician leadership to map current-state workflows in Visio and Lucidchart, then proposed redesigns that cut process bottlenecks for diagnostics and part replacements by approximately 12%.
- Designed and executed validation scripts and audit checks using SQL and Python to ensure that digital inspection and billing data aligned with physical work performed—driving audit readiness and reducing billing disputes by 30%.
- Maintained reporting infrastructure and documentation (data dictionaries, ETL logic, dashboard definitions) in SharePoint to ensure version control and accessibility for both technical and non-technical stakeholders.
- Engaged cross-functionally with parts, service, and customer-care teams to identify predictive analytics opportunities (e.g., anticipating part failures or service demand), enabling better staffing and parts ordering strategies.
- Monitored key performance indicators daily and generated executive-ready summaries that informed strategic decisions on service offerings, parts procurement, and pricing adjustments—supporting more agile decision-making across the workshop network.

TECHNICAL SKILLS

|                                       |                                                                                                                      |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Data Analysis & Reporting             | SQL, Python, R, Advanced Excel, Statistical Modeling, Forecasting, Data Cleaning & Transformation                    |
| Business Intelligence & Visualization | Power BI, Tableau, RStudio, BIRT, Prism Analytics, Excel Dashboards, DAX, KPI Development, Data Storytelling         |
| Database & Data Management            | Data Validation, ETL Processes, Data Reconciliation, Query Optimization, Data Governance, Model Risk Management      |
| Tools & Platforms                     | Jira, Confluence, SharePoint, Visio, Lucidchart, SSMS, RStudio, Workday Prism, Excel VBA, GitHub                     |
| Programming & Automation              | Python (Automation, Scripting), SQL Stored Procedures, Excel VBA Automation, Data Extraction APIs                    |
| Process Modeling & Documentation      | BRDs, FRDs, User Stories, BPMN, Process Flow Diagrams, Data Dictionaries, Model Documentation Frameworks             |
| Cloud & Integration                   | Azure, AWS (Data Storage & Reporting), Workday Studio, Core Connectors, EIB Integrations                             |
| Testing & Validation                  | UAT, Regression Testing, Test Case Design, Model Validation, Data Audit & Risk Controls                              |
| Compliance & Risk Management          | Model Validation (Credit Risk, Treasury, Mortgage), SOX, HIPAA, Data Privacy, Audit Readiness, Governance Frameworks |

EDUCATION

University of Texas, Richardson, TX  
Master in Business Analytics & Data Science

Jan 2023 - Dec 2024

PROJECTS

Sales Data Analysis and Dashboard Development

- Analyzed retail sales data to identify trends and developed Tableau dashboards to visualize KPIs, enabling data-driven decision-making for stakeholders.
- Collected, cleaned, and analyzed sales datasets using Excel and SQL for data validation and transformation.
- Created Tableau dashboards to present actionable insights to stakeholders, improving data-driven decision-making.

- Prepared business requirement documents outlining analytical goals, KPIs, and visualization specifications.
