SUMMARY

Data Analyst with **3.5+ years of experience** specializing in **AI/ML-driven analytics, data modeling, and cloud-based business intelligence**. Proven success in designing **predictive models, interactive dashboards, and ETL pipelines** that enhance data accuracy and decision-making for enterprise and consulting environments. Proficient in **Python, SQL, Power BI, TensorFlow, and Azure ML**, with hands-on experience in **data automation, visualization, and statistical analysis**. Adept at transforming complex datasets into actionable insights, mentoring teams, and driving measurable business and research outcomes through data-driven innovation.

PROFESSIONAL EXPERIENCE

KPMG | Data Analyst

USA | August 2025 – Present

- **Spearheaded** development of **AI-powered financial analytics dashboards** using **Python, SQL, and Power BI**, enabling executives to forecast key risk metrics across **\$450M in client portfolios**, demonstrating strong **strategic insight**.
- **Engineered** end-to-end **machine learning pipelines** with **scikit-learn, TensorFlow, and Azure ML**, improving prediction accuracy of audit anomalies by **22,000 data points monthly** and reducing manual validation time by **68 hours per audit cycle**.
- **Orchestrated** cloud migration of structured and unstructured data to **Azure Synapse and Snowflake**, consolidating **1.2 TB of financial data** into centralized models, enhancing **data reliability** and accelerating reporting delivery by **3 business days**.
- **Collaborated** with KPMG's **Advisory and Risk Analytics teams** to deploy **AI-driven fraud detection models**, identifying **340+ high-risk transactions** across banking clients, strengthening **data governance** and compliance under **SOX frameworks**.
- **Directed** creation of marketing intelligence dashboards leveraging **NLP, ChatGPT API, and Tableau**, uncovering **market sentiment trends across 12 industries**, driving insights used in KPMG's **Digital Trust & Transformation practice**.
- **Pioneered** a cross-functional **AI enablement initiative**, mentoring 4 analysts on **prompt engineering, MLOps, and data storytelling**, resulting in a **2x increase** in internal project adoption rate and positioning KPMG as a leader in **AI-powered consulting**.

Kennesaw State University | Graduate Teaching Assistant

USA | August 2024 – May 2025

- **Facilitated** undergraduate coursework in **Data Science, Python Programming, and Machine Learning**, supporting over **90 students** per semester and improving class project completion rates by **18%** through active **mentorship and lab-based**.
- **Developed** academic projects integrating **Python, Pandas, and Scikit-learn**, guiding students in building **predictive analytics models** for real-world datasets related to **financial forecasting and healthcare data optimization**.
- **Collaborated** with faculty to design and grade **data visualization assignments** using **Tableau and Power BI**, ensuring alignment with KSU's **Applied Data Analytics curriculum** and enhancing **student engagement** through interactive analytics labs.
- **Implemented** automated grading scripts using **Jupyter Notebooks and SQL**, reducing manual evaluation time by **25 hours per term**, and strengthening **efficiency** in course administration and performance tracking.
- **Conducted** workshops on **AI ethics, research methodologies, and cloud-based data management (AWS & Google Colab)**, enabling students to complete **12+ capstone projects** aligned with industry best practices and fostering **academic excellence** in applied machine learning.

Kennesaw State University | Graduate Research Assistant

USA | January 2024 – May 2024

- **Conducted** research on **machine learning model interpretability** using **SHAP, LIME, and PyTorch**, analyzing over **150K data records** to improve explainability metrics for AI-driven decision systems in academic healthcare studies.
- **Designed** and deployed **data preprocessing and feature engineering pipelines** with **Python, Pandas, and Scikit-learn**, boosting experimental model accuracy by **12 data points** across classification and regression tasks.
- **Implemented** reproducible **data experimentation workflows** in **Jupyter and Google Colab** integrated with **Git and MLflow**, improving research versioning efficiency and enabling **multi-team collaboration** across the university's AI research lab.
- **Researched on data bias detection using NLP and sentiment analysis**, presenting findings to a panel of **5 senior professors**, and enhancing **academic recognition** within KSU's **Center for Applied Artificial Intelligence**.

Robosoft Technologies | Data Analyst

India | June 2021 – June 2023

- **Devised** intelligent data models using **Python, TensorFlow, and SQL** to uncover behavioral trends across **3 fintech client portfolios**, driving actionable insights that boosted user retention by **11,000+ active customers**.
- **Executed** predictive analysis workflows combining **Random Forest and Gradient Boosting algorithms**, improving product recommendation accuracy for a retail client's mobile app by **24,300 successful predictions monthly**.

- **Formulated** real-time KPI dashboards with **Power BI and DAX**, consolidating metrics from **Google Analytics, MySQL, and Salesforce**, which enhanced executive reporting efficiency by **36 business hours weekly**.
- **Constructed** data ingestion pipelines through **AWS Glue and Redshift**, automating ETL processes for **1.5 TB** of daily customer interaction data, and ensuring 99.9% consistency across multi-cloud environments.
- **Coordinated** with software development and marketing teams to implement **NLP-driven sentiment analysis systems**, processing **250,000+ customer reviews**, which improved product feedback cycles and strategic decision-making accuracy.
- **Innovated** a campaign analytics framework powered by **scikit-learn and Tableau**, helping clients optimize marketing spend and increase ROI by **\$85K** within the first quarter of deployment.
- **Administered** cross-functional sprints integrating **A/B testing, MLOps pipelines, and anomaly detection models**, refining deployment reliability and demonstrating strong **data governance and automation leadership**.
- **Initiated** training sessions on **AI-powered business analytics**, mentoring **5 junior analysts** in building reproducible machine learning experiments using **Google Colab, Pandas, and Seaborn**, fostering an internal **data-driven culture**.

TECHNICAL SKILLS

- **Programming:** Python, SQL, R, Java, C, C++, MATLAB
- **Data Analysis:** EDA, Data Cleaning, Ad-hoc Analysis, Trend Analysis
- **BI & Visualization:** Power BI, Tableau, Matplotlib, Seaborn, Dashboards
- **Statistics:** Probability, Hypothesis Testing, Regression, A/B Testing, Time Series
- **Machine Learning:** Feature Engineering, Model Training, Predictive Analytics
- **ML Libraries:** Scikit-learn, TensorFlow, PyTorch
- **AI / GenAI:** LLM Basics, Transformers, Prompt Engineering
- **Data Engineering:** Data Pipelines, ETL/ELT, Data Modeling, Workflow Automation
- **Big Data:** Hadoop, Spark, PySpark, Distributed Processing
- **Databases:** MySQL, PostgreSQL, Snowflake, BigQuery, Redshift
- **Cloud Platforms:** AWS, GCP, Build & Deployment Automation
- **Data Quality:** Validation, Anomaly Detection, Quality Checks
- **Automation:** Python Automation, Scheduled Jobs
- **Dev Practices:** Git, CI/CD Basics, Code Reviews, Unit Testing
- **Business Skills:** KPI Analysis, Stakeholder Reporting, Documentation

EDUCATION

Kennesaw State University , Kennesaw, GA, USA - Master of Science in Computer Science	Aug 2023 – May 2025
Vignan Nirula Institute of Technology and Science for Women , India - B.Tech, Information Technology	Aug 2019 – May 2023

PROJECTS

Sales Insights Data Analysis – Power BI

- **Engineered** an interactive Power BI solution integrating **SQL, DAX, and Power Query**, transforming multi-regional sales data into dynamic visual dashboards that increased revenue trend visibility and improved executive forecasting accuracy by **30%**.
- **Partnered** with cross-functional sales and operations teams to define KPIs and design drill-through reports, enabling real-time tracking of **customer performance and market segmentation**, which reduced decision turnaround time by **25 hours monthly**.

Air Quality Data Analysis & Dynamic Visualization

- **Developed** a real-time **Power BI/Tableau** dashboard visualizing **air quality indices (AQI), pollutant concentration, and regional patterns**, streamlining environmental reporting and reducing manual report generation time by **50%**.
- **Automated** data preprocessing, trend detection, and visualization updates using **Python and SQL**, enhancing analytical efficiency and achieving **95% accuracy** in recurring environmental datasets.

CERTIFICATIONS

- Programming in Java, Microsoft Certification
- Machine Learning, Infosys Certification
- Hackathon Winner, Virtusa Certification
- Data Analytics with Python, NPTEL Certification
- Python Programming, HackerRank Certification
