

Anju Gopalakrishnan | Sr. Data Analyst

Alpharetta, Georgia | Anjugopalakrishnan25@gmail.com | 404 382 7708 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

Experienced Data Analyst with 10 years of designing and delivering end-to-end analytics solutions in modern, cloud-native environments. Expertise in building scalable ETL/ELT pipelines with Python, SQL, Airflow, and dbt, and integrating data across AWS (S3, Redshift, Lambda), Azure (Data Factory, Synapse), and GCP (BigQuery, GCS). Proficient in transforming raw, complex datasets into actionable insights through interactive BI dashboards (Power BI, Tableau), advanced analytics, and predictive modeling (ARIMA, LSTM, Random Forest, NLP). Skilled in cloud data engineering, real-time processing, and ML-powered forecasting pipelines that reduce latency and enhance enterprise decision-making. Proven track record in modernizing legacy systems, optimizing workflows, and enabling data-driven cultures to drive measurable business impact.

TECHNICAL SKILLS:

- **Programming & Scripting:** Python, R, Java, SQL, PL/SQL, Teradata SQL, C/C++, Bash
- **ETL/ Data Warehousing:** Informatica PowerCenter, Ab Initio, SSIS, DataStage, Informatica Repository/Designer/Workflow tools
- **Data Visualization:** Power BI, Tableau (Desktop, Server, Online, Public, Reader), MATLAB
- **Databases:** Oracle (10g/9i), Teradata, DB2/UDB, SQL Server, MySQL, PostgreSQL, MS Access, MongoDB, Hive, Presto, AWS RDS, AWS Redshift, AWS Redis, BigQuery
- **Cloud Platforms:** Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP)
- **Big Data & Analytics Tools:** Apache Spark, Apache Hive, Apache Kafka, Hadoop, Airflow, Flask, Jupyter Notebook
- **Data Modeling:** Erwin, ER/Studio
- **DevOps & Automation:** GitHub Actions, Terraform, RESTful APIs, CI/CD pipelines, Docker, Kubernetes
- **Scheduling Tools:** Control-M, Autosys
- **Collaboration Tools:** Salesforce, Mixpanel, Amplitude, Box, SharePoint, SAP S/4 HANA, Jira, Excel
- **Operating Systems:** Windows, UNIX, Linux, NCR MP-RAS UNIX

PROFESSIONAL SUMMARY:

Client: Regions Bank, Atlanta GA (June 2024 – Present)

Role: Sr. Data Analyst

Responsibilities:

- Delivered business strategy recommendations by applying advanced analytics and process automation across financial domains.
- Automated reports and developed interactive dashboards in Power BI, Tableau, and Excel, improving operational efficiency by 30%.
- Extracted, transformed, and cleansed data from Oracle, flat files, mainframes, and SAP sources using PL/SQL, SQL, SSIS, Azure Data Factory, and Python, ensuring high-quality datasets.
- Authored complex stored procedures, optimized SQL queries, and migrated SAS scripts to Snowflake and Teradata, enabling faster cross-platform analytics.
- Analyzed large financial datasets (ACH transactions, loan performance, balance sheets) with SQL, Python, and SAS for KPI generation and compliance reporting.
- Conducted requirements workshops and gap analysis sessions with cross-functional teams to standardize KPIs and improve reporting consistency.
- Designed and published Power BI dashboards with DAX measures, Power Query, dynamic filters, role-based security, and automated refresh schedules.
- Automated financial workflows and anomaly detection with Python, ARIMA, LSTM, and AI techniques, reducing manual reconciliation by 35% and improving forecasting accuracy.
- Partnered with data science teams to implement NLP-based classification models, streamlining document tagging and workflows.
- Automated ETL workflows using Python, Airflow, AWS Glue, and containerized solutions on AWS ECS, reducing report generation time by 40%.
- Designed and maintained enterprise data models with Erwin, reverse-engineered from ODS systems, and published in Model Mart for reuse.
- Utilized Azure Databricks for building scalable ETL pipelines that accelerated financial data processing and improved accuracy of compliance reporting.
- Implemented real-time fraud detection models on Databricks, leveraging Spark's machine learning capabilities to proactively identify suspicious transactions.
- Migrated dashboards and applications to Azure, executing data validation, UAT, deployment, and production support.
- Extracted and transformed SAP S/4HANA data into analytics-ready datasets, ensuring reconciliation across OLTP/OLAP systems and enabling real-time financial reporting.
- Integrated SAP S/4HANA in-memory capabilities with BI tools to improve KPI visibility and operational decision-making.
- Developed KPIs, Tableau TDE extracts, and ad-hoc visualizations for legal, billing, and strategic planning use cases.

- Centralized structured/unstructured data into AWS S3 and Snowflake; applied SQL validation scripts for scalable analytics and governance.
- Implemented anomaly detection with Python to flag discrepancies, reducing manual checks by 30% and improving data quality.
- Partnered with DevOps and offshore teams to containerize, version, and deploy ETL workflows; supported UAT, business validation, and system modifications.
- Collaborated with 50+ stakeholders across 15+ teams, delivering Tableau/Power BI dashboards that improved decision-making accuracy by 25% and achieved 95% on-time delivery.
- Migrated legacy SQL systems to AWS RDS, ensuring 100% data accuracy and eliminating \$2M in annual maintenance costs.
- Consolidated 20+ raw data formats into a single schema with Python and Athena; automated retrieval from 100+ sources, saving 200+ analyst hours monthly and reducing infrastructure load by 25%.
- Implemented anomaly detection (Isolation Forest, Autoencoder) to identify irregular transaction patterns, reducing financial risk.
- Built post-migration KPI dashboards in Power BI, providing visibility into performance, security, and remote access—supporting \$10M+ in projected savings.
- Standardized pipelines with ops and analytics teams, ensuring governance compliance and producing reusable documentation to support scaling.

Client: Black Rock, Atlanta GA (Jan 2023 - May 2024)

Role: Sr. Data Analyst

Responsibilities

- Collaborated with Agile teams (PMs, BAs, DBAs, Scrum Masters, architects, and engineers) to gather requirements, create Jira user stories, and deliver dashboards aligned with business goals.
- Performed advanced data analysis with SQL, Python, and SAS to generate KPIs, financial reporting, and operational insights for \$50M+ business units.
- Designed and deployed interactive dashboards in Power BI, Tableau, and SAS Enterprise Guide using DAX, LOD expressions, advanced calculations, role-based security, and automated refreshes.
- Integrated and transformed heterogeneous data sources (Oracle, SQL Server, Excel, flat files, SAP S/4HANA ERP, APIs) into analytics pipelines via SSIS, AWS Glue, Azure Data Factory, Apache Airflow, and Snowflake.
- Developed scalable ETL pipelines, star/snowflake schema models, and SQL DDL scripts with ERWIN; leveraged AWS S3 to improve performance and reduce data latency.
- Built ARIMA-based forecasting models in Python and integrated them into Power BI for predictive insights.
- Maintained version control and documentation for ETL scripts, dashboards, and Airflow DAGs using GitLab, enabling CI/CD in collaboration with DevOps teams.
- Executed data profiling, cleansing, validation, and migration across OLTP, ODS, and cloud databases (BigQuery, CloudSQL), ensuring accuracy and consistency.
- Optimized SQL queries and schema designs in Snowflake, BigQuery, and CloudSQL, achieving faster query performance and scalable analytics solutions.
- Integrated SAP ERP and external API data securely using authentication tokens and cloud-native services to power KPI dashboards on Azure and AWS.
- Developed data integration workflows on Azure Databricks to consolidate diverse financial data sources, enabling comprehensive portfolio analysis.
- Automated predictive analytics using Databricks notebooks and ML libraries to enhance trading cost forecasts and risk management.
- Delivered source-to-target mappings, automated financial reporting, and predictive analytics to modernize legacy systems and align with evolving strategies.
- Built and deployed time-series forecasting and ML models in Jupyter Notebooks and Airflow, enabling proactive financial planning and real-time monitoring.
- Mentored junior analysts, data governance and CMS compliance, and promoted a data-driven culture across distributed teams.
- Developed an LLM-powered text detection pipeline (Python, SQL, Snowflake, DBT) that prevented misclassification in CTI reports and reduced review efforts by 40%.
- Automated ingestion and cleaning of 1M+ CTI reports, saving 40+ hours per week and accelerating threat intelligence cycles.
- Streamlined detection workflows and prioritized expert-authored content, extending patch cycles from 6 to 12 months and saving \$2M+ annually.

Client: Denodo, India | (Jan 2019 - April 2021)

Role: Data Analyst

Responsibilities:

- Delivered executive-ready Power BI dashboards and scorecards for KPIs, and financial metrics using DAX, R scripts, and SQL.
- Performed exploratory data analysis (EDA) and preprocessing of financial datasets using Python (pandas, numpy, matplotlib); integrated R/Python scripts within Power BI for advanced trend analysis.
- Developed Python modules to calculate financial ratios, moving averages, and volatility metrics across equity and bond portfolios,

strengthening investment analytics.

- Partnered with data engineering teams to design Python-based streaming ingestion workflows with Azure Stream Analytics, enabling real-time reporting.
- Worked on Complex SQL queries, stored procedures, views, and PL/SQL triggers to support data modeling and BI initiatives.
- Collaborated with stakeholders, SMEs, and BAs to capture requirements and deliver BI solutions aligned with SDLC phases.
- Integrated and transformed OLTP system data via SSIS, Azure Data Factory, Azure Stream Analytics for real-time and batch analytics.
- Published and maintained Power BI reports with row-level security, automated refresh schedules, and role-based access to ensure secure delivery.
- Built and optimized data models in Snowflake and Redshift, designing schemas with ERwin for scalable business intelligence solutions.
- Built dynamic Power BI data models with calculated tables, computed columns, pivot/unpivot transformations, and Azure Blob Storage integration.
- Created streaming data processing pipelines with Databricks to deliver real-time analytics and support timely business intelligence reporting
- Technical design documents, unit test cases, and user guides; collaborated in Agile ceremonies to ensure timely sprint delivery.
- Conducted ETL optimization, real-time data streaming, and performance monitoring to improve reporting timeliness and reliability.
- Resolved data integrity and duplication issues through profiling, cleansing, and reconciliation; coordinated with cross-functional teams for alignment.
- Designed Tableau dashboards and managed Tableau Server users/permissions to centralize enterprise reporting.
- Automated approval processes by creating SharePoint-integrated workflows with internal systems, reducing manual interventions.
- Contributed to scalable SaaS deployment by optimizing 15+ services on GCP App Engine and Kubernetes (GKE); supported business case development and Agile delivery.
- Analyzed 5M+ transaction logs using SQL to identify recurring fraud patterns, enabling policy updates that reduced resolution time by 18% and saved \$700K annually.
- Built Tableau dashboards to track fraud types by channel, region, and risk level, accelerating case triage and improving risk-lead decisions.
- Consolidated siloed data from 6+ sources into a normalized SQL schema, reducing inconsistencies by 80% and providing a unified fraud analytics resource.
- Segmented users by risk behavior with historical data and business rules, improving fraud detection accuracy and reducing false positives by 21%.

Client: DHL, India | (Aug 2015 - Dec 2018)

Role: Data Analyst

Responsibilities:

- Managed client data on Salesforce, created tailored plans, and tracked mutual fund performance using Excel and Bloomberg analytics.
- Defined business transformation rules, data mappings, and source-to-target interfaces across ODS, OLTP, and OLAP environments.
- Designed and maintained Power BI dashboards with normalized/de-normalized data models, DAX, calculated columns, and row-level security for sensitive reporting.
- Optimized SharePoint sites to enable seamless collaboration, version control, and data-driven communication across business and IT teams.
- Gathered business requirements, authored BRDs, and conducted gap analysis, accelerating Power BI development cycles by 40% and supporting legacy system migration efforts.
- Created and tuned SQL and PL/SQL scripts for data extraction, transformation, and indexing; executed ETL workflows using Base SAS and custom scripts.
- Performed comprehensive data profiling, cleansing, and validation with Talend, Informatica, and SQL to ensure high-quality, reliable datasets.
- Integrated structured and unstructured data sources into AWS S3, enabling centralized data storage and scalable analytics across supply chain dashboards.
- Leveraged Amazon Redshift for high-volume data warehousing, enabling efficient query execution for supply chain risk analytics.
- Contributed to metadata management, governance frameworks, and data quality programs in compliance with internal audit and control standards.
- Built source-to-target mapping documents, transformation rules, and data dictionaries; modeled logical/physical schemas with Erwin and reverse-engineering techniques.
- Migrated large datasets from Oracle to Teradata, developed reconciliation reports, validated migration scripts, and supported batch job scheduling.
- Authored technical documents, PRDs, and safety workflows, aligning execution across global delivery teams and ensuring regulatory compliance.
- Delivered training, documentation, and UAT support, ensuring smooth deployment and business adoption of analytics solutions.
- Captured customer feedback and collaborated with product and engineering teams to drive iterative improvements.
- Presented high-visibility dashboards and product performance metrics to leadership, influencing business strategy and roadmaps.
- Resolved technical challenges with innovative solutions, resulting in a 25% increase in system reliability and reporting efficiency.

Client: eClerx, India | (Jan 2013 – Jul 2015)

Role: Jr. Data Analyst

Responsibilities:

- Analyzing various logs that are been generated and predicting/forecasting the future outcome with various python libraries. Created/modifying worksheets and data visualization dashboards in Tableau.
- Applied Python libraries for exploratory data analysis and predictive modeling on system-generated logs, delivering actionable forecasting insights; built and optimized Tableau worksheets and interactive dashboards for trend visualization.
- Designed and implemented robust data mapping, transformation, and cleansing rules within Master Data Management (MDM) frameworks, spanning OLTP, ODS, and OLAP systems.
- Conducted in-depth data profiling by identifying datasets, metadata definitions, and source formats, ensuring alignment with business data standards.
- Partnered with the ETL team to capture and document complex transformation logic, facilitating seamless migration of data from OLTP systems into the warehouse environment for reporting and analytics.
- Performed end-to-end validation, including ETL mappings, stored procedures, and XML message testing, ensuring high data integrity and accuracy across systems.
- Developed Power BI dashboards leveraging parameters, calculated columns, and dynamic table calculations.
- Produced detailed use cases, activity diagrams, and logical components to map business process flows using Rational Rose, UML, and Microsoft Visio.
- Contributed to the development and deployment of enterprise BI solutions using SSIS, SSRS, and SSAS, enabling consistent analytics
- Authored SQL and PL/SQL test cases for UAT, verifying system outputs against transformation and reporting requirements.
- Created and optimized T-SQL queries in support of evolving business requirements; implemented dimensional modeling techniques including role-playing dimensions, fact-less fact tables, snowflake, and star schemas.
- Drafted source-to-target mapping documentation for transformation rules while supporting continuous data analysis initiatives.
- Used SQL, T-SQL, and PL/SQL to develop stored procedures, triggers, functions, and reusable packages for reporting workflows.
- Automated and distributed periodic reporting (weekly, biweekly, monthly) using SQL and MS Excel, improving transparency of operational performance metrics.

EDUCATION QUALIFICATION:

MBA from Gannon University, Erie, PA | Dec 2022

Bachelors Degree from Sri Satya Sai University of Technology, India | 2011

CERTIFICATIONS:

Data Analysis Using Python (IBM)

SQL - Advanced for Data Professionals

Advanced SQL: MySQL Data Analysis & Business Intelligence

Power BI Data Analytics for All Levels 2.0

Data Science: Probability in R (Harvard),

Data Science (Orientation and Tools) (IBM)

KEY ACHIEVEMENTS

- Built and deployed modern data pipelines using Python, SQL, Airflow, and Snowflake across AWS, Azure, and GCP, improving data processing efficiency by 50%.
- Migrated legacy systems to cloud-based architectures (Snowflake, BigQuery, Redshift), reducing infrastructure costs by 30% and enabling real-time analytics.
- Delivered 40+ BI dashboards (Power BI, Tableau) with advanced DAX, predictive modeling, and cloud data sources, supporting \$200M+ business decisions.
- Automated anomaly detection pipelines using Python and deployed on cloud-native stacks (AWS ECS, Lambda), reducing data quality issues by 40%.
