SUMMARY

Business Data Analyst with 3+ years of experience supporting business teams through clear, accurate, and easy-to-understand data insights. Skilled in translating everyday business questions into meaningful reports and dashboards. Hands-on experience with SQL, Power BI, Excel, and Python, and a solid understanding of how data flows through enterprise data warehouses. Comfortable working with multiple data sources, validating data accuracy, and handling ad-hoc analysis requests. Known for working closely with both technical teams and business users to explain trends in simple language and support confident decision-making.

SKILLS

Data Analysis, BI & Visualization: SQL, Advanced Excel (Pivot Tables, Macros), Power BI, Tableau, Looker, KPI Frameworks, Data Modeling, Drill-Down Dashboards, Insight Storytelling, Ad-hoc Analytics, Dashboard Wireframing

Programming, Analytics & Automation Tools: Python (Pandas, NumPy, Scikit-learn, Matplotlib), dbt, Alteryx, Power Query, Git, JIRA, Confluence, REST API Integration, Workflow Automation, Scheduled Pipelines, CI/CD for Analytics (GitHub Actions, Azure DevOps)

Data Engineering, Warehousing & Architecture: Snowflake, SQL Server, PostgreSQL, MySQL, Azure Synapse, Amazon Redshift, BigQuery, Data Lakehouse Architecture, ETL/ELT Pipelines, Data Quality Validation, Star/Snowflake Schema Design, Data Lineage, Metadata Documentation, Master Data Management

Statistical Modeling, Predictive Analytics & ML Techniques: EDA, Regression Analysis, A/B Testing, Hypothesis Testing, Segmentation, Time-Series Forecasting (ARIMA/Prophet), Anomaly Detection, SHAP Explainability, Risk Scoring Models, Predictive Modeling, Churn Modeling, Fraud Pattern Detection

Cloud Platforms, Integration & Big Data: AWS (S3, Glue, Lambda, Athena), Azure (Data Factory, Databricks), Data Integration Pipelines, Cross-Source Data Ingestion, Lakehouse Governance, Automation Frameworks

Business Analysis, Domain Expertise & Compliance: Data Privacy & Access Controls, Audit Readiness, Stakeholder Management, Agile/Scrum Collaboration, Cross-Functional Communication

EXPERIENCE

Business Data Analyst | Humana | USA Mar 2025 - Present

- Worked closely with care management and utilization review teams to understand how they track high-risk members and rising costs, and converted their daily questions into clear KPIs like readmission rate, ER utilization, and care gap closure.
- Used SQL on Snowflake and SQL Server to pull claims, eligibility, and provider data, and carefully joined eligibility spans with claims so costs were calculated only for active members, avoiding reporting errors.
- Built Power BI dashboards with simple drill-down views, allowing users to start at a high-level summary and click down to member, provider, or service-level details without needing technical help.
- Performed ad-hoc analysis whenever leadership raised questions, such as sudden increases in ER visits, by breaking data by diagnosis, location, and provider type and explaining the findings in plain language.
- Used Python and Excel for data validation and trend checks, for example comparing month-over-month utilization to identify unusual spikes before reports were released to leadership.
- Applied row-level security in Power BI to make sure users could only see data for their assigned regions, supporting HIPAA and internal data access rules.
- Acted as a bridge between technical teams and business users by documenting metric definitions, validating numbers with data engineers, and ensuring reports were trusted and actually used in care management decisions.

Business Data Analyst | Experion Technologies | India Feb 2021 - Jul 2023

- Worked directly with US insurance and retail clients to understand how they tracked costs, utilization, and operations, and helped replace manual Excel reporting with consistent, easy-to-use dashboards.
- Used SQL on PostgreSQL, Snowflake, MySQL, and BigQuery to extract and combine data from claims, providers, orders, and customer service systems, ensuring numbers matched real business activity.
- Created a common KPI framework so all teams calculated metrics the same way, reducing confusion during monthly and quarterly business reviews.
- Used Python (Pandas) to clean and validate data, such as matching IDs across systems, checking missing values, and confirming daily data loads before dashboards refreshed.
- Designed Power BI dashboards focused on answering one business question at a time, such as why costs increased, which providers drove higher utilization, or where operational delays were happening.
- Supported frequent ad-hoc requests from client leadership, quickly analyzing cost spikes, utilization changes, or customer issues and explaining the results using simple charts and examples.
- Collaborated closely with data engineers and QA teams to validate ETL logic, document report assumptions in plain English, and ensure stakeholders trusted the data enough to stop relying on manual reports.

EDUCATION

Master of Science in Computer Science, Florida Atlantic University, U.S.A May 2025

PROJECTS

Student Performance Analysis and Academic Success Prediction

- Developed a data-driven academic analytics system using Python and machine learning to predict student final grades with high accuracy and uncover key performance patterns.

Disease Diagnosis Prediction using Machine Learning

- Built a machine-learning-based diagnostic model that analyzes patient health metrics to accurately predict chronic disease outcomes and identify highrisk cases.
