

Bindu Sri Kandula

Data Analyst

Location: Texas, USA | **Mail:** bindusrikandula01@gmail.com | **Ph.:** +1 (318) 575-0380 | [LinkedIn](#)

Professional Summary:

- Data Analyst with 5+ years of experience in both the financial services and healthcare sectors, specializing in transforming complex data into actionable insights.
- Proficient in a wide range of technologies and methodologies, including ETL pipeline development with Databricks (PySpark), Apache Airflow and Azure Data Factory, advanced SQL for complex query optimization and data modeling with Snowflake and dbt.
- Expert in building and deploying machine learning models using Python (Pandas, NumPy, Scikit-learn) for predictive analytics, fraud detection and risk analysis.
- Successfully integrated Generative AI (LLMs via Azure OpenAI) to accelerate BRD/FRD documentation cycles and compliance summary generation.
- Skilled in creating impactful visualizations with Tableau, Power BI and Excel Power Pivot to deliver real-time insights for executive decision-making and regulatory reporting (Basel III, SOX, SEC filings).
- Proven ability to partner with stakeholders, ensure data governance (HIPAA, IT Act, 2000, SOX) and significantly improve operational efficiency and reporting timelines.

Technical Skills:

Programming & Scripting:	SQL (T-SQL, PL/SQL, Spark SQL, Snowflake SQL), Python (Pandas, NumPy, SciPy, scikit-learn, Statsmodels, PySpark), VBA (Excel Macros)
Data Engineering & ETL:	Databricks (PySpark), Apache Airflow, Azure Data Factory (ADF), SSIS, dbt (data build tool), Data Warehousing (Snowflake, Oracle, SQL Server)
Data Analytics & Machine Learning:	Exploratory Data Analysis (EDA), Regression & Classification Models, Anomaly Detection, Time Series Forecasting, Predictive Modeling, Fraud Detection, Risk Analytics, Healthcare Predictive Analytics (Readmission Prediction)
Data Visualization & Reporting:	Tableau, Power BI, Excel (Power Pivot, Advanced Excel, VBA Dashboards), SSRS
Data Governance & Compliance:	SOX, SEC, Basel III, HIPAA, HL7, ICD, EHR/EMR Standards, Data Privacy & Security (Azure Key Vault, Data Encryption, PII/PHI Compliance), Metadata & Data Lineage Tracking
Documentation & Automation:	BRD/FRD Drafting Automation via Generative AI (LLMs, Azure OpenAI), Technical Documentation, Model Validation Reports
Cloud & Big Data Ecosystem:	Azure (ADF, Key Vault, Storage), AWS (S3, EC2 basics), Databricks (Delta Lake, PySpark), Hadoop Ecosystem (HDFS, Hive basics)
Statistical & Analytical Tools:	Advanced Excel, R (basic statistical modeling), SAS (data mining & statistical analysis), Hypothesis Testing, A/B Testing, KPI Analysis, Root Cause Analysis
Regulatory & Financial Reporting:	SEC Filings, SOX Compliance Reporting, Basel III Risk Reporting, Trade Lifecycle Analytics, NAV Reconciliation, Portfolio P&L Analysis
Project & Collaboration Tools:	Jira, Confluence, Git/GitHub, MS Visio, MS Project, Agile (Scrum), Waterfall, SRS, RTM, JAD Sessions

Professional Experience:

State Street – TX, USA | August 2024 – Present

Data Analyst

Project: NextGen Asset Servicing Analytics & Regulatory Compliance Platform

- Designed and optimized complex SQL queries (T-SQL, PL/SQL, Spark SQL, Snowflake SQL) to support trade lifecycle analytics, NAV calculations, portfolio reconciliation and regulatory compliance monitoring.
- Developed and automated ETL pipelines using Databricks (PySpark), Apache Airflow DAGs and Azure Data Factory, enabling seamless ingestion of trading, settlement and market data from vendors such as Bloomberg and LSEG.
- Built scalable Snowflake data models with dbt transformations, incorporating time-travel and versioning for accurate backdated NAV recalculations and audit-ready reporting.
- Implemented Python-based reconciliation frameworks (Pandas, NumPy) to automate trade break detection and reduce portfolio reconciliation errors by 35%.
- Applied advanced analytics and machine learning models (scikit-learn regression, classification, anomaly detection) for fraud detection, trade break prediction and investment risk analysis.
- Conducted query performance tuning and Spark SQL optimization, improving data processing speed by 42% and reducing report execution time from 20 minutes to under 5 minutes.

- Delivered regulatory reports (Basel III, SOX, SEC filings) by automating Snowflake reporting views and Excel VBA dashboards, cutting reporting timelines from 7 days to 3 days.
- Designed interactive Tableau dashboards and Excel Power Pivot models to provide executives and risk managers with real-time insights into portfolio P&L explains, derivatives exposure and risk-adjusted returns.
- Established data lineage and metadata tracking frameworks to ensure compliance with SOX audits and implemented Azure Key Vault–based encryption for secure handling of sensitive financial and PII data.
- Integrated Generative AI (LLMs via Azure OpenAI) to automatically generate contextual BRD/FRD drafts and regulatory summaries by parsing financial datasets, risk models and compliance logs, accelerating documentation cycles by 50% and enhancing alignment with SEC and Basel III mandates.

HCLTech – India | June 2020 – July 2023

Data Analyst

Project: Optimizing Hospital Readmission Rates through Predictive Analytics

- Collaborated with cross-functional teams (physicians, nurses, hospital administrators) to define the scope and objectives of the readmission prediction project, aligning it with organizational goals and Indian healthcare priorities.
- Gathered and meticulously documented detailed business requirements for the readmission prediction model, ensuring alignment with clinical workflows and regulatory mandates specific to Indian healthcare.
- Extracted relevant data from diverse sources, including Electronic Health Record (EHR) systems compliant with Indian data standards, claims databases adhering to local insurance regulations and patient surveys conducted in regional languages.
- Cleaned, preprocessed and transformed large healthcare datasets, addressing missing values, outliers and inconsistencies while adhering to data quality standards mandated by Indian regulatory bodies.
- Performed in-depth exploratory data analysis (EDA) to uncover patterns, correlations and key risk factors associated with hospital readmissions within the Indian patient population, considering socio-economic determinants of health.
- Developed and implemented robust machine learning models using Python libraries (Scikit-learn, Pandas) to predict patient readmission risk, incorporating features relevant to the Indian healthcare context.
- Evaluated the performance of predictive models using appropriate metrics (accuracy, precision, recall, F1-score) and fine-tuned model parameters to optimize predictive accuracy and minimize false positives, ensuring relevance to the Indian healthcare setting.
- Created interactive and user-friendly dashboards using Power BI to visualize readmission trends, risk factors and model performance, enabling data-driven decision-making for healthcare professionals in Indian hospitals.
- Developed and maintained comprehensive documentation for the readmission prediction model, including data dictionaries, technical specifications and model validation reports, ensuring compliance with Indian data governance policies and ethical guidelines.
- Ensured strict compliance with HIPAA regulations, data privacy policies & relevant Indian healthcare regulations (Information Technology Act, 2000) throughout the project lifecycle, safeguarding patient data & maintaining ethical standard

Education:

Master of Science in Business Analytics - California State University, East Bay, Hayward, California, USA

Bachelor of Electronics and Communication Engineering - Joginpally B.R Engineering College, Hyderabad, India

Certification:

Certified with Learning Excel Desktop - (Microsoft 365)

Certified with Google Data Analytics – Coursera

Certified with Guide to Generative AI for Data Analysis and Data Science – LinkedIn Learning
