SUMMARY

- **Data & Business Intelligence Analyst with 5 years of experience**, working across healthcare and software on medical claims, cost analytics, product usage data, and operational reporting for finance, care, and product teams.
- Hands-on with **SQL, Python, Power BI, and AWS-based data platforms**, handling large claims, usage, and log datasets to deliver reports used for payout, cost, and performance decisions.
- Applied **light ML and AI-assisted analysis** for cost trend detection, cohort segmentation, and text summarization of operational notes, with outcomes reviewed and finalized by analysts.
- Worked closely with **engineering, finance, and operations** to define metrics, validate data quality, and turn raw data into dashboards and recurring insights used in production environments.

EXPERIENCE

UNITED HEALTH GROUP

Jan 2025 - Current

Data Analyst – Medical Cost & Claims Intelligence Initiative

- Analyzed **medical and pharmacy claims data** using **SQL (Snowflake on AWS)** to detect duplicate, denied, and delayed claims, helping recovery and operations teams avoid **\$1.6M+ in incorrect payouts** within the first two quarters.
- Built **member cost and utilization trend analyses** in **Python (pandas)** across chronic-condition cohorts, supporting care-management prioritization and contributing to a **7% reduction in avoidable medical spend growth**.
- Developed **Power BI dashboards** tracking medical loss ratio, provider turnaround times, and denial drivers, replacing manual Excel reports and reducing reporting effort by **40%** for finance and ops stakeholders.
- Implemented **data quality and coding validation checks** using **SQL** to audit **ICD-10, CPT, and DRG mappings**, resolving inconsistencies that impacted forecasting for **\$100M+ value-based care portfolios**.
- Used a **GenAI-powered text summarization utility** hosted on **AWS** to review and cluster large volumes of **claim notes and provider remarks**, cutting manual review time by **30%** while keeping final decisions analyst-driven.
- Automated monthly **claims variance and root-cause analysis** pipelines using **Python + SQL on AWS**, shortening close cycles by **3 days** and improving confidence in medical expense forecasts shared with senior finance leadership.

Vivma Software Inc.

Mar 2017 - Jul 2021

Business Intelligence Analyst - Product Analytics & Reporting Platform

- Built end-to-end **product and usage reporting pipelines** using **SQL (MySQL/PostgreSQL)** to track feature adoption, churn signals, and active users, improving product decision turnaround time by **35%**.
- Designed **Power BI dashboards** for engineering and product teams covering release stability, API usage, and customer behavior metrics, eliminating manual status reports and saving **15+ hours per sprint**.
- Analyzed **application logs and event data** using **SQL + Python**, identifying performance bottlenecks that helped engineering teams cut production incident volume by **22%**.
- Partnered with backend developers to define **data models and metrics** for SaaS workflows, ensuring consistent KPI definitions across teams and reducing reporting discrepancies by **40%**.
- Automated **weekly and monthly business reviews** using **Python scripts + SQL jobs**, enabling leadership to track revenue-impacting features and improving forecast alignment by **18%**.
- Supported cloud migration initiatives by validating **data accuracy and completeness** across legacy and cloud-hosted systems using **SQL reconciliation checks**, preventing reporting gaps during platform

TECHNICAL SKILLS

Programming & Libraries: Python, pandas, NumPy, scikit-learn, TensorFlow, PyTorch, R, Scala

Data Engineering & Data Platforms: Data Integration, Data Pipelines, ETL Processes, Data Modeling, Schema Design, Data Warehousing, Snowflake, Redshift, BigQuery, Cloud Data Architecture

Statistical & Analytical Methods: Regression Analysis, Hypothesis Testing, Time Series Analysis, Cohort Analysis, Trend Analysis, Anomaly Detection, Statistical Modeling

Machine Learning & AI: Regression, Classification, Clustering, Natural Language Processing (NLP), Time Series Forecasting, Anomaly Detection, Model Evaluation, AI-assisted Text Summarization

Data Analysis & Visualization: Power BI, Tableau, Seaborn, Matplotlib, Looker, Data Visualization, MS Excel Advance

Databases, Cloud & Governance: SQL (Advanced), PostgreSQL, MySQL, MS SQL Server, AWS, AWS S3, AWS EC2, AWS Lambda, Data Quality, Data Lineage, Metadata Management, Data Security, HIPAA Compliance, Access Control

Healthcare & Software Analytics: Claims Analysis, Medical Cost Analysis, Pharmacy Data Analysis, ICD-10, CPT, DRG, Utilization Analysis, Value-Based Care Analytics, Product Usage Analysis, Feature Adoption, Churn Analysis

EDUCATION

Pace University, New York City, NY | Masters of Science in Computer Science | Sep 2022 – May 2024
