

SHUBHAM GOSAVI | Data Analyst

Location: MA | Phone: +1 (774) 423 8226 | Email:shubhgosavi07@outlook.com | [LinkedIn](#)

SUMMARY

Data Analyst with 4+ years of experience across healthcare, retail, and supply chain domains, specializing in SQL, Python, Power BI, Snowflake, and ETL pipelines to deliver accurate, decision-ready insights. Proven ability to collaborate with clinical, finance, operations, and supply chain teams to improve reporting accuracy, optimize inventory, and drive measurable business outcomes through data-driven solutions. Experienced in building executive dashboards, automating reporting, and ensuring data quality in regulated and fast-paced environments.

TECHNICAL SKILLS

Languages	SQL, Python, R
Frameworks & Libraries	Pandas, NumPy, Statistical Analysis, Forecasting Models
Database	Microsoft SQL Server, PostgreSQL, MySQL, Google BigQuery, MongoDB, Snowflake, CRM Systems, ERP Databases
Visualization Tools	Power BI, Tableau, Looker Studio, Microsoft Excel, Executive Dashboards, KPI Reporting
Tools	Alteryx, JIRA, Confluence, Jupiter Notebook, Visual Studio Code, Git, Jira, Confluence, Google Sheets, SharePoint
Data Governance & Documentation	HIPAA Compliance, Data Validation, Data Quality Checks, Reconciliation, Audit & Regulatory Reporting
Data Analysis & Business Skills	Data Modeling, Trend Analysis, Root Cause Analysis, Stakeholder Reporting, Process Improvement, Cross-Functional Collaboration

EXPERIENCE

Data Analyst Fresenius, MA	Jun 2025 – Present
- Analyze IV drug, clinical nutrition, and biopharma usage using SQL and Python to identify demand trends affecting treatment for critically ill patients. - Build HIPAA-compliant data models in Snowflake by integrating pharmacy, therapy, and manufacturing data, improving reporting accuracy by 32%. - Design executive dashboards in Power BI to track drug availability, patient therapy outcomes, and hospital utilization across 40+ facilities. - Clean and validate multi-source healthcare data with Python (Pandas) and Alteryx, reducing reporting errors by 28%. - Apply statistical analysis in Python to detect shortages, therapy delays, and cost deviations, preventing over 20% of potential stock-out risks. - Automate hospital and regulatory reporting through SQL pipelines and Power BI scheduled refresh, cutting manual effort by 45%. - Partner with clinicians, quality, and supply chain teams using JIRA and Confluence to translate analytics into actions that improve patient safety and therapy efficiency.	
Data Analyst The Blu Canton, India	Sep 2021- Jun 2023
- Gathered and interpreted sales, pricing, and operations data from CRM, ERP, and finance systems using SQL to define accurate performance metrics. - Used Python (Pandas, NumPy) and Excel to clean, normalize, and structure raw datasets for analysis and forecasting. - Developed Power BI dashboards and statistical models to identify product trends, pricing gaps, and customer demand patterns, contributing to a 12% increase in ROI. - Compared forecasted vs actual revenue, contract compliance, and cost drivers to detect inefficiencies and financial leakage. - Built automated SQL-based ETL pipelines to integrate data from multiple business systems into centralized reporting models. - Implemented data validation and reconciliation checks that improved reporting accuracy and reduced manual corrections across business teams. - Presented insights to sales, finance, and operations leaders, enabling data-driven decisions for pricing strategy, resource allocation, and operational planning.	
Supply Chain Data Analyst SS Bakers, India	Oct 2018 – Mar 2020
- Analyzed 50+ SKUs using SQL and Excel to improve demand forecasting accuracy, reducing excess inventory by 18% and increasing product availability by 10%. - Built inventory and sales tracking reports in MySQL and Advanced Excel (Pivot Tables, VLOOKUP, Power Query) to monitor stock levels, reorder points, and supplier lead times. - Used Power BI to create dashboards that visualized sales trends, inventory turnover, and seasonal demand, supporting pricing and replenishment decisions. - Evaluated warehouse stock, supplier schedules, and store requirements using Excel-based models to prevent overstocking and stock-out situations. - Delivered pricing and revenue insights during peak seasons using SQL queries and Power BI, contributing to a 9% increase in monthly revenue. - Collaborated with procurement and logistics teams using ERP-generated data to align material planning with demand forecasts and operational targets. - Produced standardized performance and KPI reports for leadership on inventory aging, supplier reliability, and order fulfillment.	

EDUCATION

Master's in Business Analytics , Clark University, MA	May 2025
Master's of Business Administration , Vivekanand Education Society, India	May 2022
Bachelors in Information Technology , K.M Agrawal College, India	May 2018

PROJECTS

Airbnb Price Prediction

- Built predictive pricing models using Python (TensorFlow, NumPy) and EDA techniques to estimate optimal listing prices based on location, amenities, and demand patterns.
- Developed a PostgreSQL-based ETL pipeline to merge, clean, and validate multiple structured datasets for reliable model input.
- Simulated revenue scenarios to evaluate how optimized pricing strategies could improve host earnings and occupancy.

Pediatric Behavioral Health Analysis – Applied Business Analytics

- Analyzed pediatric behavioral health data across six Massachusetts regions (2012–2021) using Excel, Tableau, and Power BI to identify screening and care access trends.
- Created geographic and comparative models for ADHD, Autism, and bullying prevalence, highlighting high-impact regions and risk patterns.
- Delivered data-driven insights and recommendations to support improved healthcare access, school inclusion, and workplace neurodiversity initiatives.

Qatar Airways Review Analysis

- Performed customer sentiment and travel pattern analysis using Python and SQL on airline review and booking data.
- Built Tableau dashboards to visualize satisfaction by aircraft type, traveler segment, and route.
- Generated insights for marketing and customer experience teams to improve engagement and increase NPS-driven loyalty metrics.
