

SUMMARY:

Data Analyst with 4+ years of experience delivering forecasting models, automated analytics pipelines, and executive dashboards across healthcare and IT consulting. Strong expertise in Python, SQL, AWS, Spark, and Databricks, with a proven track record of building scalable ETL workflows and ML-driven insights. Adept at translating complex, fragmented data into actionable business decisions through Power BI, Tableau, and advanced statistical analysis.

SKILLS:

- Methodologies: Scrum, Kanban, Risk Management, Stakeholder Management
- Languages: Python, R, SQL, SAS
- Packages: NumPy, Pandas, Matplotlib, SciPy, Seaborn, Ggplot2
- Visualization Tools: Tableau, Power BI, Microsoft Excel, QlikView, Google Analytics
- Machine Learning & AI: Generative AI (LLM, RAG), Machine Learning, Deep Learning (Neural Networks), MLOps (CI/CD), NLP Frameworks, TensorFlow, Recommender Systems, Fraud Detection Models
- Cloud Platforms: AWS, Google Cloud Platform (GCP), Azure
- Big Data Technologies: Hadoop, Hive, Apache Spark, Databricks
- ETL Tools: Informatica, Talend, Alteryx
- Reporting Tools: SAS BI, Cognos, Business Objects
- Database: MySQL, SQL Server, MongoDB, Snowflake
- Other Skills: Data Cleaning, Data Wrangling, Critical Thinking, Problem-Solving, Communication, Presentation
- Project Management: JIRA, Trello, MS Project, Budgeting, Timeline Management, Cross-functional Collaboration

EDUCATION:

Master of Science in Engineering Management, Specialization in Data Analytics	Aug 2024 - May 2026
California State University, Northridge	
Bachelor of Science in Computer Science	May 2015 - June 2019
Panjab University, India	

EXPERIENCE:

Cardinal Health, CA Data Analyst	Oct 2023 – Current
- Built automated demand-forecasting pipelines using Python, SQL, and AWS, improving medical product forecast accuracy by 18% and reducing stock-outs across 40+ distribution centers. - Designed and deployed interactive Power BI dashboards for supply chain, regulatory, and finance leaders, cutting reporting turnaround time from days to under 2 hours. - Conducted root-cause analysis on shipment delays and order discrepancies using Pandas and Spark, enabling logistics teams to reduce delays by 12%. - Led cross-functional initiatives to standardize data quality rules, eliminating 30k+ recurring data errors across product, vendor, and transaction datasets. - Developed predictive risk-scoring models (Random Forest, XGBoost) for high-value SKUs, supporting replenishment prioritization and avoiding multi-million-dollar shortages. - Implemented automated ETL workflows using Informatica and Talend for regulatory and compliance reporting, reducing manual effort by 40%	
Infinite Infolab, India Data Analyst	Jan 2020 - Feb 2023
- Delivered end-to-end analytics solutions including data modeling, ETL development, dashboarding, and ML insights for enterprise clients across operations, sales, and finance. - Built scalable ETL pipelines using Alteryx, Talend, and SQL databases, reducing data refresh times by 50–70% and stabilizing daily reporting. - Designed predictive churn, fraud detection, and recommendation models using Python, R, and TensorFlow, improving client KPIs by 10–30%. - Developed executive-ready Tableau and Power BI dashboards consolidating multi-source data into unified business views. - Led data cleaning and standardization initiatives using Pandas, SQL, and regex pipelines, significantly improving data reliability. - Collaborated with engineering teams to deploy ML workflows in MLOps environments, reducing model downtime and accelerating release cycles.	

ACADEMIC PROJECT

- Research Paper: - Descriptive Study to Evaluate Burnout among Healthcare Workers during the COVID-19 Pandemic.
 - The research aimed to understand the impact of pandemic-related stressors on the well-being of medical staff.
 - Designed and implemented survey instruments to collect quantitative and qualitative data on burnout.
 - Analyzed survey responses and conducted statistical analysis to identify patterns and correlations.
 - Presented findings to hospital management and provided recommendations for mitigating burnout.
 - Identified key stressors contributing to burnout, enabling the hospital to implement targeted interventions.
- Data Visualization Project (Tableau): -- Airport Performance Analytics
 - Implemented a comprehensive Tableau project to analyze and visualize airport performance metrics using excel data sheet. The primary objective was to provide actionable insights into flight cancellations and delays.

CERTIFICATION:

Six sigma green belt - March 2025
