

BINDU SRI YADAGIRI | DATA ANALYST

(502) 497-1154 • binduyadagiri6@gmail.com • [linkedin.com/in/bindu-sri-yadagiri](https://www.linkedin.com/in/bindu-sri-yadagiri) • Open to Relocate

PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience in data modeling, statistical analysis, and visualization using Tableau and Power BI. Skilled in Python, and SQL for data extraction, cleaning, and transformation. Experienced in predictive modeling and machine learning with Scikit-learn, TensorFlow, and Keras. Proficient in A/B testing, hypothesis testing, and time-series forecasting. Strong background in automating ETL workflows and managing cloud-based data systems on AWS and Azure.

SKILLS

Programming & IDEs: Python, R, SQL, NoSQL, Jupyter Notebook, Visual Studio Code
Data Processing & Cloud Tools: Pandas, NumPy, SSIS, AWS (S3, Lambda), Azure (Data Lake, Databricks), GCP, Snowflake
Machine Learning & AI: Scikit-learn, TensorFlow, Keras, NLP (Text Classification, Sentiment Analysis), Generative AI (LLMs, Prompt Engineering), Predictive Modeling, Recommendation Systems
Statistical & Analytical Methods: Regression Analysis, Decision Trees, Random Forests, Support Vector Machines, Statistical Modeling, Hypothesis Testing, A/B Testing, Cohort Analysis, Time-Series Forecasting
Visualization & BI Tools: Tableau, Power BI, Looker, QlikView, Advanced Excel (Pivot Tables, Power Query, VBA, Lookups)
Databases & Data Management: MySQL, SQL Server, MongoDB, SQL Server Management Studio
Version Control & Collaboration: Git, GitHub, JIRA, Confluence, Slack
Core Data Skills: Data Cleaning, Data Transformation, Data Integration, Data Warehousing, Data Governance

PROFESSIONAL EXPERIENCE

Hartford Financial Services Group, USA | Data Analyst

February 2025 - Present

- Analyzed large-scale insurance datasets (claims, policy, premium, loss history) using Python and Snowflake, performing advanced data cleaning and transformation to improve data accuracy by 30%, enabling reliable loss ratio and exposure analysis for underwriting teams.
- Developed time-series forecasting models to predict monthly claim volumes and severity trends, improving capacity planning and reserve estimation accuracy by 22%, directly supporting actuarial and risk management decisions.
- Built automated analytical pipelines leveraging AWS S3 and Snowflake to ingest and process structured and semi-structured data, reducing manual reporting effort by 40% and accelerating turnaround time for regulatory and executive reports.
- Implemented NLP-based text classification models on unstructured claims adjuster notes and customer descriptions using Python, increasing claim categorization accuracy by 28% and enabling faster fraud detection and claims triage.
- Designed Looker dashboards and queries using SQL Server Management Studio, tracking KPIs such as claim cycle time, policy retention, and loss ratios, and collaborated cross-functionally via JIRA to deliver data-driven insights that reduced claim processing delays by 18%.

Adons Softech, India | Data Analyst

September 2021 – July 2023

- Processed high-volume transactional and customer datasets using Pandas and NumPy, executing robust data cleansing and feature engineering workflows that improved model-ready data quality by 35% across analytics projects.
- Integrated structured data from multiple client systems into a centralized SQL Server-based data warehouse, enabling consistent reporting and reducing data reconciliation issues by 30% through standardized data integration pipelines.
- Constructed scalable analytics pipelines on Azure Data Lake and Azure Databricks, reducing data processing time by 45% and supporting batch and incremental data ingestion for downstream BI and machine learning use cases.
- Trained predictive models and recommendation systems using Scikit-learn, applying Random Forests and Support Vector Machines to forecast customer behavior and product affinity, improving prediction accuracy by 20%.
- Executed hypothesis testing and cohort analysis to evaluate customer retention and engagement trends, delivering statistically validated insights that influenced client marketing and product optimization strategies, increasing retention by 12%.
- Delivered executive-level insights through Power BI dashboards and technical documentation in Confluence, improving stakeholder decision-making speed by 25% and ensuring analytics deliverables met audit and knowledge-sharing standards.

7FinCorp Group, India | Junior Data Analyst

July 2020 – August 2021

- Performed end-to-end exploratory data analysis (EDA) on large financial and customer datasets using Python, Pandas, and NumPy, uncovering behavioral patterns that improved credit risk and customer segmentation accuracy by 25%.
- Built supervised classification models to predict customer default and lead conversion outcomes, leveraging engineered features from transaction and demographic data to increase model precision by 18%.
- Conducted sentiment analysis on customer feedback and support interactions using Python-based NLP techniques, enabling proactive issue identification and contributing to a 20% improvement in customer satisfaction metrics.
- Streamlined data wrangling workflows by consolidating structured and semi-structured data from MongoDB, applying transformation logic and validation checks that reduced data inconsistencies by 30%.
- Visualized key financial and operational KPIs using QlikView and Advanced Excel (Pivot Tables, Power Query, VBA, Lookups), delivering automated dashboards and reports that reduced manual analysis effort by 35%; version-controlled analytics assets via GitHub.

EDUCATION

Master of Science in Business Analytics | University of Louisville, Kentucky, USA
Bachelor of Technology in Computer Science Engineering | Jawaharlal Nehru Technological University, Hyderabad, India
