

ANUPOOJITHA PUSULURI

OH | +1 (234) -221-8809 | anupoojithapusuluri016@gmail.com | [LinkedIn](#)

SUMMARY

- Around 4 years of expertise in data analytics and database development, specializing in ETL design, data modeling, data visualization, and automated reporting.
- Proficient in AWS and Azure cloud platforms with hands-on experience in Python, SQL, Snowflake, PySpark, SQL Server, Databricks and DBT for scalable data processing, pipeline orchestration, and transformations.
- Hands-on experience building end-to-end ETL pipelines and data models with complex data transformations, scalability, and performance for large-scale analytics.
- Skilled in Spark Core, Azure Data Factory, Azure Data Lake Gen2, Snowflake, and Microsoft Fabric (Data Factory, Lakehouse, Notebooks, Pipelines, Power BI) to build and orchestrate end-to-end data workflows and cloud-based analytics solutions.
- Experienced in Python libraries (NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, Seaborn, TensorFlow) for analytics, machine learning, and statistical modeling.
- Expertise in DB Design, DB normalization and writing SQL queries & PL/SQL- Stored Procedures, Functions, Triggers, Sequences, Indexes and Views.
- 4+ years of experience in Power BI and Tableau, building interactive dashboards with advanced DAX and monitoring KRIs and KPIs with analytical capabilities.
- Experienced financial analytics within healthcare banking and pharmacy supply chain, including bank operations, loan underwriting model evaluation, capital and liquidity risk monitoring, FDIC regulatory compliance, fraud detection, reconciliation, and audit support.

TECHNICAL SKILLS

Programming & Data Processing: Python, PySpark, SQL, R
ETL Tools: Azure Databricks, Microsoft Fabric Notebooks, Azure Data Factory, AWS (EC2, Glue, Redshift)
Reporting Tools: Power BI, Tableau, SSRS, SSAS, DAX, PowerPoint, Advanced Excel
Database/Cloud Technology: Azure, Microsoft Fabric, MySQL, SQL Server, Oracle, Snowflake
AI & Other Tools: GitHub, Workiva, Jira, Confluence, Copilot Bot Automation, OpenAI, A/B Testing
Finance Domain Knowledge: Financial Statements, Banking Operations, Claims Analytics, Risk Management, Audit Processes, KRIs, KPIs, Regulatory Compliance (Basel, FASB, IFRS), Loan Underwriting & Evaluation, Fraud Detection, Financial Reporting, Reconciliation & Controls
Core Competencies & Soft Skills: Stakeholder Communication, Problem Solving, Critical Thinking, Data-Driven Decision Making, Operational Efficiency, Business Process Improvement.

PROFESSIONAL EXPERIENCE

- Optum | Data Analyst

August 2024 – Present

 - Collaborated with business, risk surveillance, Bank, Internal Audit, and regulatory teams to define KRIs/KPIs, set performance thresholds, and implement automated monitoring alerts, enhancing compliance visibility, operational efficiency, and decision-making effectiveness.
 - Built and optimized end-to-end ETL pipelines in Azure Fabric and Databricks using PySpark, SQL, and Python to integrate, cleanse, and transform large-scale healthcare and financial datasets, improving data reliability, processing efficiency, and downstream analytics accuracy.
 - Performed data cleaning, complex transformations, and test case analysis using Fabric Notebooks and Databricks with PySpark, SQL, and Python to ensure data accuracy, consistency, and reliability across analytics workflows.
 - Optimized Machine Learning Models for fraud detection and journal entry analysis using Isolation Forest, Autoencoders, and statistical techniques to identify anomalies and strengthen financial data integrity.
 - Designed and Managed automated hourly, daily, and monthly data refresh schedules in Microsoft Fabric Pipelines and Notebooks, utilizing Windows Task Scheduler in SQL Server to automate 9 plus departmental report execution and ensure timely data delivery.
 - Analyzed healthcare loan portfolios at Optum Bank to assess risk exposure, ensure underwriting compliance, and perform data validation and reconciliation.
 - Built Python scripts to extract data via REST APIs and process it in Databricks and Data Lake using Azure Data Factory, streamlining workflows and system integration.
 - Developed multiple Copilot bots such as KRI Automation and Process Automation bots to streamline compliance, regulatory, and audit functions by generating Python scripts, creating automation plans, and improving cross-department information flow saving up to one week per metric.
 - Collaborated with data architects and compliance teams to enforce governance standards, ensuring HIPAA-compliant data handling and reporting accuracy.
 - Built ETL and R scripts to automate the calculation and monitoring of 30+ KRIs using statistical rules, scheduling monthly runs, and integrating outputs into Power BI dashboards in Microsoft Fabric for ongoing risk analysis and reporting.
 - Used Power BI and Tableau to visualize complex financial data, develop KRIs/KPIs, and create ad-hoc reports and audit visuals, enabling deeper analysis, compliance tracking, and data-driven decision-making.
- Deloitte | Data Analyst

January 2021 – May 2023

 - Collaborated with cross-functional stakeholders to translate business requirements into analytical solutions, developing Power BI and Tableau dashboards using SQL and Python to automate reporting workflows and enhance decision-making accuracy.
 - Designed and optimized ETL workflows using Azure (Databricks, Data Factory, Blob Storage, Functions, SQL Database, and Data Lake Storage) to build scalable data pipelines and deliver accurate, analysis ready datasets for data-driven decision-making.
 - Extracted, processed, and integrated data from various sources (CSV, JSON, XML) using PySpark, SQL, Databricks, and Azure Data Factory, while developing and maintaining ETL workflows with complex transformations, aggregations, joins, and data cleansing to deliver accurate, analysis-ready datasets.
 - Built and deployed statistical anomaly detection models using Python and SQL to identify fraudulent activities, uncover suspicious patterns, and detect inefficiencies.
 - Performed data extraction and transformation using Snowflake SQL cleansing and consolidation to integrate multi-source data for accurate reporting and analytics.
 - Conducted in-depth Snowflake performance tuning, identifying, and optimizing SQL queries through warehouse sizing, materialized views, and partitioning.
 - Automated Power BI and Tableau dashboards tracking KPIs, KRIs, and compliance metrics by integrating data from multiple sources, reducing reporting time by 45% and improving real-time visibility for business and audit teams.
 - Proficient in advanced data analysis and profiling techniques using SQL, demonstrating a comprehensive understanding of database concepts including indexing, normalization, and query optimization, facilitating efficient data manipulation and extraction for insightful analytics and decision-making processes.
 - Managed and shared data analysis projects on GitHub, version-controlling Python and SQL scripts, documenting workflows, and collaboration on analytical solutions.
 - Leveraged advanced Excel (VBA, pivot tables, formulas like VLOOKUP, INDEX/MATCH, XLOOKUP, and IF/COUNT/SUM functions) to automate tasks, streamline processes, and improve efficiency.
 - Participating in weekly and monthly management calls to address weekly issues and process-related queries and creating presentations KPI for senior management.
 - Responded to client queries within SLA/TAT with full accuracy, ensuring timely resolution, while designing, updating, and maintaining Power BI dashboards to provide actionable insights and support data-driven decision-making.

EDUCATION

Master of Computer Science
Kent State University, USA

CERTIFICATIONS

- Microsoft Certified – Power BI Data Analyst Associate
- AWS Certified Cloud Practitioner – Badge issued by AWS
- SnowPro Core Certification – Badge issued by Snowflake
- Deloitte – Data Analytics Job Simulation (Forage)
- GitHub – Career Essentials in GitHub Professional Certificate
- LinkedIn Learning – Practical GitHub Copilot
- HackerRank – Python Professional Certificate
