

PROFESSIONAL SUMMARY

- **9+ years of experience** in data analysis, data modeling, and data engineering across Finance, Healthcare, and P&C Insurance, improving reporting accuracy and data reliability by **30–40%**.
- Designed **20+ enterprise data models**, **50+ STTMs**, and large-scale **Kimball-based** star schemas, increasing data consistency and query performance by **up to 45%**.
- Built **100+ automated data pipelines** using **Python, SQL, Alteryx, PySpark, Hive, Informatica, and Snowflake**, reducing manual effort and batch processing time by **20–60%**.
- Strong background in **data profiling, SCD/CDC, MDM, metadata, lineage, and regulatory datasets (HIPAA, HEDIS, CMS)**, ensuring audit-ready and compliant data flows.
- Proven ability to partner with actuaries, clinicians, underwriters, and data science teams to translate business needs into scalable analytical and engineering solutions.
- Leveraged **Generative AI tools (GPT, Copilot)** to automate documentation, quality checks, and mapping logic, accelerating delivery by **25%**.

TECHNICAL SKILLS:

Operating Systems	Linux, Unix, Windows 2010/2008/NT/XP.
Business Intelligence Tools	Power BI, Tableau, Qlik View, SSRS.
Data Modelling Tools	Erwin, MS Visio, E/R Studio.
Languages	MS SQL, PL/SQL, UNIX, Shell scripts Alteryx (Advanced), GCP (BigQuery, Cloud Storage, Composer).
Microsoft Tools	Excel, Access, PowerPoint, Word, Outlook, And Visual Studio.
Databases	Oracle 11g/10g/9i/8i, MS SQL Server 2008/2005, Azure SQL Server, Netezza, Snowflake, Sybase, Teradata and DB2

PROFESSIONAL EXPERIENCE**Webster Bank, Stamford, CT****Jun 2024 – Present****Senior Data Analyst****Responsibilities:**

- Led end-to-end **data warehouse lifecycle activities** including analysis, design, ETL/ELT development, data quality validation, and testing using Informatica, Snowflake, Oracle, and GCP.
- Designed **conceptual, logical, and physical data models** using ERwin/MarkLogic; applied **3NF + Kimball** methods to build star schemas, conformed dimensions, atomic fact tables, and reusable enterprise-wide data structures.
- Created **source-to-target mappings**, metadata, and data lineage documentation for insurance entities (Package ID, Business Risk Unit, Coverage, Vehicle, Policy, Named Insured), ensuring consistency across EDH and downstream systems.
- Developed automated **Python- and SQL-based** data validation, profiling, reconciliation, and OOB balancing controls (Infogix + custom logic), improving audit compliance and reducing manual effort by **50–65%**.
- Built and orchestrated **data pipelines** using Alteryx, Airflow, DBT, Stitch, BigQuery, and Snowflake; integrated APIs (Salesforce, Wrike) and migrated structured/unstructured data from legacy and cloud systems.

- Delivered **executive-ready dashboards** in Tableau and Power BI using advanced DAX/time-intelligence, improving operational reporting and accelerating data-driven decision-making by **25%**.
- Supported business-critical initiatives including system migrations, policy conversions, risk modeling, surveillance & default forecasting (Reuters, Bloomberg), and GCP-based product performance analytics.
- Acted as the primary liaison for stakeholders, contributing to **Agile ceremonies**, defining user stories, resolving escalations, and ensuring alignment across business, data architects, and engineering teams.

Environment: Erwin, PL/SQL, RDMS, SDLC, Alteryx, Tableau, Enterprise data warehouse, Jira, data mapping,

US Renal Care, Plano, TX

Apr 2021 – Dec 2023

Senior Data Analyst

Responsibilities

- Analyzed **clinical, claims, provider, and Medicare datasets** to support population health, risk adjustment, reimbursement validation, and care management initiatives while ensuring **CMS, NCQA, and HIPAA** compliance.
- Designed and maintained **healthcare data models** (3NF + dimensional) for patient, provider, encounters, claims, risk scores, and care gaps; created **STTM, lineage, and metadata** documentation to improve reporting accuracy by **30%**.
- Built and optimized **ETL/ELT pipelines** using BigQuery, Snowflake, DB2, Netezza, Informatica, Databricks, DBT/Data form, KNIME, Airflow, and Alteryx; improved ingestion performance and query efficiency by **35–50%**.
- Automated **data profiling, reconciliation, and cleansing** using Python (pandas, regex), SQL, and KNIME, significantly improving data quality for clinical analytics and research.
- Partnered with physicians, clinical quality, ETL teams, and data governance groups to define business rules, validate KPIs (HEDIS, care gaps, risk scores), and harmonize healthcare code/decode structures across EDH/MDM frameworks.
- Created and maintained **materialized views**, curated datasets, and governed transformations for datasets exceeding **13M+ records**, enabling scalable analytics and BI reporting.
- Developed executive-ready dashboards using **Power BI, Tableau, and Excel (Power Query/VBA)**, simplifying complex clinical and operational data and improving decision-making across medical and administrative teams.
- Supported enterprise migration initiatives by mapping legacy healthcare systems to modern data warehouse models, aligning reference data, and resolving cross-platform discrepancies to ensure accurate downstream analytics.

Environment: Erwin, Oracle, MS SQL Server, SQL scripts, Shell scripting, Alteryx, Tableau, Excel, JIRA, HIPAA, PHI/PII handling protocols.

Allianz, Minneapolis, MN.

Jan 2018 - Mar 2021

Data Analyst

Responsibilities:

- Collaborated with business stakeholders, actuaries, and underwriters to analyze P&C policy, coverage, and risk-unit data, translating requirements into standardized data structures for analytics and regulatory reporting.
- Designed and maintained **conceptual, logical, and physical data models** using ERwin; built **3NF integrations** and **Kimball-based star schemas** with conformed dimensions supporting premium, risk, and policy analytics.
- Developed and optimized **Informatica PowerCenter ETL mappings** to ingest data from DB2 and Netezza into Snowflake; improved data quality and reduced rework by **20%** through early identification of policy-level data gaps.
- Authored complex **SQL and Python** scripts for data validation, reconciliation, and automation of quality checks, ensuring accurate harmonization of Named Insured, Risk Unit, Coverage, and other critical policy attributes.
- Built analytic data models and transformations using **Snowflake, DBT, and SSAS**, supporting BI dashboards in Power BI and enhancing performance across large policy datasets.
- Managed metadata, lineage, and business glossaries for key insurance entities, aligning with data governance, MDM, and enterprise architecture standards.
- Supported Agile delivery by participating in sprint planning, backlog grooming, and user story definition while monitoring Control-M batch processes and resolving data load issues in UNIX environments.

Environment: ERwin, Snowflake, Netezza, DB2, Python (pandas, SQLAlchemy), Shell scripting, Unix, Control-M, Excel, Jira.

Essjay Ericsson, Hyderabad, India

Aug 2014 - Dec 2017

Data Analyst

Responsibilities:

- Collaborated with Product Owners, Business Analysts, Data Modelers, and ETL leads to gather requirements, perform impact analysis, and translate business needs into BRDs, dimension/fact specifications, and reporting views.
- Reviewed and validated **logical/physical data models**, SQL DDL, and ETL logic before deployment; performed production migration checks and led User Acceptance Testing for new IDW objects and processes.
- Reduced **out-of-balance (OOB) issues by 60%** by tuning Infogix rules and implementing custom balancing controls across financial tables and hierarchies.
- Developed complex **SQL** for financial data analysis and quality checks (joins, unions, subqueries, CTEs, window functions), automating manual validations for key metrics such as Net New Assets and brokerage account activity.
- Designed frameworks for new financial hierarchies (Segment, Revenue, Expense), supported source system retirement analysis, and helped build standardized structures in the Finance Reporting Layer.
- Delivered executive dashboards in **Tableau** to visualize trends for NNA, NTR Households, New Advisors, and other financial KPIs, enabling leadership to make data-driven decisions.

Environment: Microsoft SQL Server 2012, SSRS, SSIS, RDBMS, MYSQL, Tableau, Hadoop, Erwin

EDUCATION

- Master's in Business Analytics -**Avila University**
- Bachelor degree in Computer Science -**Hyderabad Institute Of Technology**
