Professional summary

Senior Data Analyst / SQL Server Developer with 6 years of experience in designing, developing, and optimizing complex T-SQL objects and SSIS ETL pipelines. Delivered end-to-end data integration for healthcare systems (Epic, Lawson, Cerner), cutting manual refresh effort by 30% and enabling real-time clinical and financial reporting. Built and maintained SSRS and Power BI dashboards that support population health analysis and operational decision-making. Seeking to apply deep SQL Server and BI expertise to drive data-driven outcomes in a forward-looking organization.

Technical Skills

- **Data Warehousing & BI:** SQL Server Business Intelligence Studio (SSIS, SSRS, SSAS, DTS), Azure SQL
- **Reporting Tools:** SSRS 2019/2017/2016/2014, Excel, Tableau, Power BI
- **Database:** MS SQL Server 2016/2014, Oracle, MS-ACCESS
- **Programming:** Python, TSQL, DAX, MDX
- **IT Processes:** Software Development Life Cycle (SDLC), Project Management
- **Productivity Applications:** MS Word, MS Excel, MS Access, MS Project, Visio
- **Operating System:** Windows Vista/NT/XP/98/95, Windows 2003/2000 Server, UNIX
- **Cloud services:** Microsoft Azure, AWS
- **Developer Tools:** Informatica Power Center, Informatica IDQ, SSIS, Cognos Analytics, SSMS

Work Experience

Kettering Health

Jan 2024 - Present

SR, Data Analyst /SQL Server Developer

Miamisburg, OH,USA

- Designed, developed, and optimized complex T-SQL stored procedures, triggers, and functions for healthcare data processing and analytics, which improved query performance and enabled faster report generation
- Build ETL pipelines using SSIS to integrate data from Epic Clarity, Lawson, and Cerner into the SQL Server data warehouse, ensuring timely data availability for downstream reporting
- Implemented data quality and validation checks to ensure accuracy of patient, provider, and financial data across multiple systems.
- Automated data refresh and reconciliation processes, reducing manual workload by 30%.
- Developed and maintained SSRS and Power BI dashboards for clinical, financial, and operational reporting (e.g., patient outcomes, readmission rates, revenue cycle metrics).
- Partner with clinical departments to design ad-hoc SQL queries and analytical models using SSMS and Power BI, supporting population-health and quality initiatives and helping identify high-risk patients
- Translate stakeholder requirements into technical specifications and validate reporting results for accuracy and compliance using SSRS and Cognos Analytics, ensuring reports meet clinical standards and reducing reporting errors
- Provided data-driven insights for process improvement, patient satisfaction, and resource optimization initiatives.
- Work extensively with Epic Clarity and Caboodle data models for patient encounters, ADT, billing, and scheduling modules, enabling accurate reporting and faster data retrieval for clinical teams
- Ensured HIPAA compliance and patient data confidentiality during report development and data sharing.
- Supported Meaningful Use, quality measures, and compliance reporting for hospital and outpatient systems using Oracle, MS Access, and Excel, which helped the organization meet regulatory deadlines
- Collaborated with data governance teams to establish standardized KPIs and reporting definitions across departments.
- Improved query performance by 40% through index tuning, query refactoring, and execution plan analysis.
- Created SQL Agent Jobs and automated ETL workflows to ensure timely data availability for dashboards and analytics.
- Migrated legacy reports to Power BI and SSRS, improving visualization, usability, and scalability.
- Created and maintained normalized and de-normalized data models in SQL Server using SSMS, enabling reliable healthcare analytics and reporting across the organization
- Developed parameterized stored procedures in SSMS using T-SQL, enabling dynamic Power BI dashboards and self-service reporting for faster decision-making
- Implemented CDC (Change Data Capture) and incremental load processes for near real-time data updates in SQL Server.
- Conducted query optimization and index maintenance to handle high-volume transactional datasets efficiently.
- Designed and managed partitioned tables to improve query performance for high-volume fact tables in data warehouse.
- Design end-to-end ETL pipelines in SSIS to integrate data from Epic, Kronos, Lawson, and PeopleSoft, delivering consolidated patient and billing information for reporting
- Utilized lookup transformations, conditional splits, and derived columns to standardize patient, encounter, and billing data.
- Implemented error handling and logging frameworks for ETL jobs to ensure data reliability and traceability.
- Coordinated with infrastructure teams to schedule and monitor ETL jobs via SQL Agent and Control-M.

- Migrated legacy ETL packages from DTS/SSIS 2008 to SSIS 2019 with improved modularity and performance.

Capgemini Technology Services India Limited

Apr 2021 - Jul 2023

SR, Data Analyst

- Developed and deployed robust ETL pipelines across three major business units: Reyes Beverage Division, Coca-Cola Bottling, and Reyes Holdings Corporation, ensuring smooth data flow from source to Snowflake.
- Conducted Exploratory data analysis (EDA) to uncover trends and business insights, improving decision-making efficiency.
- Extracted, transformed, and loaded large datasets from Microsoft SQL Server to Azure Blob Storage, and automated data movement to Snowflake using Microsoft Azure Data Factory pipelines.
- Built and optimized ETL pipelines in Azure Data Factory, SSIS, and Databricks to migrate and transform data from SQL Server and other sources into target systems, improving data consistency across platforms
- Analyzed high-volume datasets on Databricks clusters, producing insights that informed quarterly business reviews
- Designed and published executive-level Power BI dashboards and reports, translating complex data into actionable business insights aligned with stakeholders' requirements.
- Delivered enterprise reporting solutions for clients including Reyes Beverage Division, Coca-Cola Bottling, and Reyes Holdings Corporation.
- Designed and deployed advanced Power BI dashboards and semantic data models, incorporating DAX measures and Power Query (M) transformations for enterprise clients including Reyes Beverage Division and Coca-Cola Bottling.
- Monitored data integrity and pipeline performance, troubleshooting issues and resolving ServiceNow incidents to maintain data accuracy and operational continuity.
- Developed and implemented a custom Generative AI solution using Python and SQL within a cloud environment, resulting in a 30 % improvement in data processing efficiency.
- Created ServiceNow incidents for Azure pipeline failures using Azure DevOps and Python automation, then resolved each incident, which helped reduce pipeline downtime and improve service reliability

DBS Bank

Jan 2020 - Apr 2021

Data Analyst

Maharashtra, India

- Developed complex SQL queries, stored procedures, and views in Oracle/SSMS to extract and transform banking datasets from Core Banking, Credit Card, and CRM systems, enabling faster data retrieval for analysis
- Built automated ETL workflows using AWS Glue and SSIS to integrate data from Core Banking, Credit Card, and CRM systems into a centralized reporting database, reducing data load time and enabling timely reporting
- Created Power BI and Tableau dashboards to monitor key banking KPIs such as loan disbursement, deposit growth, and delinquency trends.
- Partnered with Finance and Risk teams, using SQL and Power BI, to analyze portfolio performance, customer behavior, and credit risk exposure, delivering insights that guided risk-mitigation strategies
- Ensured data accuracy and consistency by implementing validation checks and reconciliation logic across data pipelines.
- Developed reports for Basel III, AML, and KYC compliance to meet internal and MAS (Monetary Authority of Singapore) regulatory standards.
- Optimized SQL queries and indexing strategies, improving query execution times by up to 50%.
- Conducted customer segmentation and retention analysis using T-SQL and Excel, delivering insights that guided targeted marketing and product campaigns
- Designed self-service data models enabling business users to generate ad hoc reports efficiently.
- Automated monthly and quarterly financial reporting processes, reducing manual effort by 60%.
- Analyzed transaction-level data to detect anomalies and improve fraud detection accuracy.
- Built SSRS dashboards in Visio that tracked customer onboarding, transaction volumes, and channel performance across digital and branch operations, enabling managers to identify bottlenecks and improve processing speed by 10%
- Partnered with business stakeholders to translate analytical findings into actionable strategies for growth and risk reduction.
- Support decision-making by delivering SQL-driven insights on cross-sell and up-sell opportunities, which improve the effectiveness of targeted campaigns
- Integrated Python and SQL to build churn-prediction and credit-scoring models, enabling the team to prioritize high-risk customers and improve credit-risk assessment
- Collaborated with Data Governance teams using SSRS and MS Access to standardize metrics, naming conventions, and reporting logic across departments, improving report consistency
- Validated and reconciled financial data across systems to ensure consistency for audits and compliance reviews.
- Delivered insights that contributed to a 10% increase in digital banking adoption and customer retention.
- Created dynamic DAX measures and calculated columns in Power BI to enhance visualization and performance tracking.
- Maintained documentation of data flows, business rules, and transformation logic for better auditability.
- Conducted data profiling and cleansing to improve data quality and reduce discrepancies in financial reporting.
- Coordinated with IT and Infrastructure teams to implement database security policies, access controls, and automated backup processes on Windows Server and AWS, resulting in zero security incidents and reliable data recovery

- Provide ad hoc data analysis using Azure SQL and Excel for management reviews, risk assessments, and operational improvement initiatives, enabling informed decision-making
- Implemented version control using Git for SQL scripts and BI assets to ensure consistency and rollback capability.
- Reduced report generation time by automating recurring SQL queries and scheduling daily refreshes in Power BI Service.
- Support machine learning projects by cleaning and structuring data sets in Oracle and Excel for model training and validation, enabling faster model development
- Partnered with business and compliance units to streamline AML alert monitoring and suspicious transaction reporting through Cognos Analytics dashboards, reducing manual review time by 30%
- Conducted exploratory data analysis to identify hidden patterns in customer spending and loan repayment behavior.
- Contributed to forecasting models for deposit growth and loan portfolio expansion using Python and SQL analytics.
- Improved overall reporting efficiency and reliability through performance tuning and process automation.

Education

University of North Texas

Master of Science, Data Science

USA

Sathyabama Institute of Science and Technology

Bachelor of Engineering

India

Certifications

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Data Engineer Associate (DP-203)
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Programming for Everybody (Getting Started with Python) University of Michigan, Coursera
- Getting Started with Power BI - Coursera
