SUMMARY

Data Analyst with **5+ years** in insurance and telecom analytics, generating cloud-based insights using **Python, Pandas, SQL, BigQuery, and Excel**. Skilled in **EDA**, forecasting, segmentation, statistical modeling, **SQL window functions**, and **Python automation**, transforming **GCS** datasets into decision-ready outputs that improved visibility across **12+ operational units**. Partnered with cross-functional teams to design KPI layers, support **A/B analysis**, and build dashboards in **Tableau, Power BI, and Looker Studio**.

PROFESSIONAL EXPERIENCE

Data Analyst | Liberty Mutual | USA

September 2025 – Present

- Analyzed claim intake patterns using **Python, Pandas**, and **BigQuery**, performing **EDA** on datasets across **12 regions** to detect volume shifts that stabilized workloads for **8 claim units**.
- Consolidated policy, billing, and incident data from **7 cloud sources including GCS and AWS S3** using **SQL**, creating KPI layers and **Excel** cohort summaries applied in monthly reviews for **5 underwriting divisions**.
- Built automated **SQL** audit logic and **data quality checks** across **20+ claim attributes**, using datasets sourced from **GCS and AWS S3** to strengthen validation flows for **3 operational groups**.
- Crafted **Tableau** and **Power BI** dashboards integrating loss metrics, submission counts, and **regression-based** cycle indicators supporting planning cycles for **6 underwriting teams**.

Data Analyst | Tata Consultancy Services | India

December 2021 – August 2023

- Executed migration to **GCP BigQuery** while performing sorting, warehousing, cleaning, and **data quality checks**, enabling analysts to query **40M+ telecom records** with stable performance across operational workloads.
- Constructed **Python, SQL**, and **Pandas** transformation pipelines to standardize call-detail fields used across **18 dashboards**, ensuring analytic consistency and alignment for multiple reporting groups.
- Designed **SQL** validation logic and statistical comparison routines across **25+ tables**, strengthening reconciliation accuracy between cloud and legacy datasets for **3 analytics departments**.
- Produced forecasting datasets using **time-series analysis** and BigQuery aggregations for modeling network behavior across **10 geographic zones**, supporting predictive planning activities.
- Assembled **Looker Studio** dashboards showing call-quality clusters, device categories, and churn signals, generating weekly insights reviewed by **6 operational leads** for service optimization.
- Created anomaly-detection logic with **Python** to flag irregular usage patterns across **5 categories**, enabling monitoring teams to escalate critical deviations ahead of incident windows.
- Structured analytical marts in **BigQuery** using **star** and **snowflake schema** concepts, supporting computation of **30+ KPIs** used by product and network stakeholders in recurring reports.
- Collaborated with **8 cross-functional teams** to harmonize definitions across **50+ recurring reports**, improving documentation clarity and reducing downstream reporting discrepancies.

Junior Data Analyst | Trigent Software | India

June 2020 – November 2021

- Examined product-usage logs containing **2M+ events** using **Python** and **SQL**, uncovering behavioral patterns that informed optimization recommendations adopted by **4 client** product teams across lifecycle initiatives.
- Prepared validated reporting extracts across **15+ customer attributes** using **SQL** and **Excel**, supporting weekly analytics cycles and reducing manual data refinement for analysts in **3 business units**.
- Conducted structured **EDA** on funnel progression data spanning **6 lead** stages, identifying conversion irregularities that guided campaign adjustments implemented by sales groups in **2 active regions**.
- Built consolidated **KPI** workbooks using **Excel** by merging revenue signals, pipeline movement, and engagement indicators, enabling streamlined review sessions for **5 account** leadership teams.
- Cleaned and standardized CRM exports originating from **4 operational systems** using **Python**, producing analysis-ready datasets aligned with quarterly reporting outputs consumed by executive stakeholders.
- Developed **Power BI dashboards** showing lifecycle movement and retention behavior, delivering interactive insights that supported engagement monitoring across **10** defined customer segments.

TECHNICAL SKILLS

- Programming & Querying:** Python (Pandas, NumPy), SQL, Excel (Advanced)
- Cloud Analytics:** BigQuery, Google Cloud Storage (GCS), AWS Redshift, AWS S3
- Data Analysis:** EDA, KPI Analysis, Trend Analysis, Forecasting, Segmentation, Cohort Analysis, Ad-hoc Analysis
- Visualization:** Tableau, Power BI, Looker Studio
- Data Preparation:** Data Cleaning, Data Transformation, Data Validation, Data Quality Checks
- Data Warehousing:** Star Schema, Snowflake Schema, Dimensional Modeling
- Statistics:** Regression Analysis, Time-Series Analysis, Hypothesis Testing
- Tools:** Git, GitHub, JIRA, VS Code, PyCharm

EDUCATION

Master of Science, Advanced Data Analytics | University of North Texas | Denton, TX

August 2023 – May 2025

PROJECTS

American Airlines — Baggage Arrival Time Prediction Model

- Formulated** a predictive modeling framework using **Python, Regression**, and **Snowflake** to analyze **50M+ flight records**, producing decision-ready outputs visualized in **Tableau** and **Power BI** to support operational planning and reduce baggage-handling delays.

Batch Data Warehouse ETL Pipeline for Sales Analytics

- Orchestrated** **AWS Glue** and **PySpark** transformations to clean and model **10M+ daily sales records**, loading optimized **Redshift** tables that enabled forecasting, KPI tracking, and trend analysis for merchandising and operations teams.
