Professional Summary

Computer Science Graduate student and former Software Engineer with 1.5+ years of experience in architecting scalable data systems. Specialized in engineering low-latency pipelines and optimizing database environments to improve system reliability. Experienced in deploying machine learning models and leveraging analytics to transform raw data into strategic technical assets.

Education

Youngstown State University

Master's of Computing and Information Systems GPA: 3.90

Dec 2025

Vignan's Institute of Management and Technology For Women

Bachelor of Technology in Computer Science & Engineering

july 2022

Technical Skills

Programming: Python, SQL (MySQL, PostgreSQL), Java, C++, R, Node.js, C

ETL & Data Processing: ETL pipeline design, data extraction, data transformation, data loading, data cleaning, data validation

Data & Visualization: Tableau, Power BI, Microsoft Excel, Informatica, Google Data Studio

Databases: MongoDB, Cassandra, Oracle, MS SQL Server, Neo4j, Teradata, DB2

Tools & Web: Flask, HTML/CSS, JavaScript, Git, Bitbucket, Apache Tomcat, JBoss

Technical Skills

Programming: Python, SQL (MySQL, PostgreSQL), Java, C++, R, Node.js, C

Data & Visualization: Tableau, Power BI, Microsoft Excel, Informatica, Google Data Studio

Databases: MongoDB, Cassandra, Oracle, MS SQL Server, Neo4j, Teradata, DB2

Tools & Web: Flask, HTML/CSS, JavaScript, Git, Bitbucket, Apache Tomcat, JBoss

Professional Experience

Artha Data Solutions

Software Engineer

July 2022 – Dec 2023

- Executed all phases of the SDLC to implement data-centric software solutions and improve system reliability.
- Performed deep-dive technical problem analysis to resolve bottlenecks and optimize data processing speeds.
- Managed MySQL databases and complex datasets to ensure high data integrity for executive decision-making.
- Synthesized raw data into detailed business intelligence reports to validate new strategic initiatives.
- Conducted rigorous data cleaning and quality assurance testing to maintain accurate longitudinal records.

Vignan's Institute of Management and Technology For Women

Technical Research Intern

Jan 2022 – July 2022

- Designed and implemented software solutions and algorithms to support departmental research projects in AI/ML.
- Collected, processed, and analyzed large datasets, generating insights and visualizations to support hypotheses.
- Collaborated with faculty and student teams to develop functional prototypes and document technical findings.
- Developed modular code components to improve the efficiency of data retrieval and processing in research.

Relevant Projects

Low-Latency Edge Computing Architecture For Health Monitoring

- Engineered a real-time data pipeline using Flask to analyze physiological data from wearable IoT sensors.
- Implemented a Random Forest Classifier to categorize health states, drastically reducing latency for alerts.
- Managed data persistence with MongoDB Atlas for secure logging and longitudinal health analysis.

Performance Analysis of ML Techniques For Intrusion Detection

- Analyzed large-scale network traffic datasets to identify and classify security threats using Python.
- Applied Difficult Set Sampling (DSSTE) to fix class imbalance, significantly increasing detection accuracy.

Creating Chatbot Using Python and Machine Learning

- Built a chatbot platform using AI algorithms to interpret customer queries and automate responses.
- Analyzed interaction data to identify trends and suggest strategic areas for service improvement.
